1 Introduction  1
1.1 What is econometrics?  1
1.2 Is financial econometrics different from ‘economic econometrics’?  2
1.3 Types of data  3
1.4 Returns in financial modelling  7
1.5 Steps involved in formulating an econometric model  9
1.6 Points to consider when reading articles in empirical finance  10
1.7 Econometric packages for modelling financial data  11
1.8 Outline of the remainder of this book  22
1.9 Further reading  25
   Appendix: Econometric software package suppliers  26

2 A brief overview of the classical linear regression model  27
2.1 What is a regression model?  27
2.2 Regression versus correlation  28
2.3 Simple regression  28
2.4 Some further terminology  37
2.5 Simple linear regression in EViews – estimation of an optimal hedge ratio  40
2.6 The assumptions underlying the classical linear regression model  43
2.7 Properties of the OLS estimator  44
2.8 Precision and standard errors  46
2.9 An introduction to statistical inference  51
2.10 A special type of hypothesis test: the $t$-ratio 65
2.11 An example of the use of a simple $t$-test to test a theory in finance: can US mutual funds beat the market? 67
2.12 Can UK unit trust managers beat the market? 69
2.13 The overreaction hypothesis and the UK stock market 71
2.14 The exact significance level 74
2.15 Hypothesis testing in EViews – example 1: hedging revisited 75
2.16 Estimation and hypothesis testing in EViews – example 2: the CAPM 77

Appendix: Mathematical derivations of CLRM results 81

3 Further development and analysis of the classical linear regression model 88
3.1 Generalising the simple model to multiple linear regression 88
3.2 The constant term 89
3.3 How are the parameters (the elements of the $\beta$ vector) calculated in the generalised case? 91
3.4 Testing multiple hypotheses: the $F$-test 93
3.5 Sample EViews output for multiple hypothesis tests 99
3.6 Multiple regression in EViews using an APT-style model 99
3.7 Data mining and the true size of the test 105
3.8 Goodness of fit statistics 106
3.9 Hedonic pricing models 112
3.10 Tests of non-nested hypotheses 115

Appendix 3.1: Mathematical derivations of CLRM results 117
Appendix 3.2: A brief introduction to factor models and principal components analysis 120

4 Classical linear regression model assumptions and diagnostic tests 129
4.1 Introduction 129
4.2 Statistical distributions for diagnostic tests 130
4.3 Assumption 1: $E(u_i) = 0$ 131
4.4 Assumption 2: $\text{var}(u_i) = \sigma^2 < \infty$ 132
4.5 Assumption 3: $\text{cov}(u_i, u_j) = 0$ for $i \neq j$ 139
4.6 Assumption 4: the $x_i$ are non-stochastic 160
4.7 Assumption 5: the disturbances are normally distributed 161
4.8 Multicollinearity 170
4.9 Adopting the wrong functional form 174
4.10 Omission of an important variable 178
4.11 Inclusion of an irrelevant variable 179
4.12 Parameter stability tests 180
4.13 A strategy for constructing econometric models and a discussion of model-building philosophies 191
4.14 Determinants of sovereign credit ratings 194

5 Univariate time series modelling and forecasting 206
5.1 Introduction 206
5.2 Some notation and concepts 207
5.3 Moving average processes 211
5.4 Autoregressive processes 215
5.5 The partial autocorrelation function 222
5.6 ARMA processes 223
5.7 Building ARMA models: the Box–Jenkins approach 230
5.8 Constructing ARMA models in EViews 234
5.9 Examples of time series modelling in finance 239
5.10 Exponential smoothing 241
5.11 Forecasting in econometrics 243
5.12 Forecasting using ARMA models in EViews 256
5.13 Estimating exponential smoothing models using EViews 258

6 Multivariate models 265
6.1 Motivations 265
6.2 Simultaneous equations bias 268
6.3 So how can simultaneous equations models be validly estimated? 269
6.4 Can the original coefficients be retrieved from the $\pi$s? 269
6.5 Simultaneous equations in finance 272
6.6 A definition of exogeneity 273
6.7 Triangular systems 275
6.8 Estimation procedures for simultaneous equations systems 276
6.9 An application of a simultaneous equations approach to modelling bid–ask spreads and trading activity 279
6.10 Simultaneous equations modelling using EViews 285
6.11 Vector autoregressive models 290
6.12 Does the VAR include contemporaneous terms? 295
6.13 Block significance and causality tests 297
6.14 VARs with exogenous variables 298
6.15 Impulse responses and variance decompositions 298
6.16 VAR model example: the interaction between property returns and the macroeconomy 302
6.17 VAR estimation in EViews 308
7 Modelling long-run relationships in finance

7.1 Stationarity and unit root testing
7.2 Testing for unit roots in EViews
7.3 Cointegration
7.4 Equilibrium correction or error correction models
7.5 Testing for cointegration in regression: a residuals-based approach
7.6 Methods of parameter estimation in cointegrated systems
7.7 Lead--lag and long-term relationships between spot and futures markets
7.8 Testing for and estimating cointegrating systems using the Johansen technique based on VARs
7.9 Purchasing power parity
7.10 Cointegration between international bond markets
7.11 Testing the expectations hypothesis of the term structure of interest rates
7.12 Testing for cointegration and modelling cointegrated systems using EViews

8 Modelling volatility and correlation

8.1 Motivations: an excursion into non-linearity land
8.2 Models for volatility
8.3 Historical volatility
8.4 Implied volatility models
8.5 Exponentially weighted moving average models
8.6 Autoregressive volatility models
8.7 Autoregressive conditionally heteroscedastic (ARCH) models
8.8 Generalised ARCH (GARCH) models
8.9 Estimation of ARCH/GARCH models
8.10 Extensions to the basic GARCH model
8.11 Asymmetric GARCH models
8.12 The GJR model
8.13 The EGARCH model
8.14 GJR and EGARCH in EViews
8.15 Tests for asymmetries in volatility
8.16 GARCH-in-mean
8.17 Uses of GARCH-type models including volatility forecasting
8.18 Testing non-linear restrictions or testing hypotheses about non-linear models
8.19 Volatility forecasting: some examples and results from the literature
8.20 Stochastic volatility models revisited
8.21 Forecasting covariances and correlations 428
8.22 Covariance modelling and forecasting in finance: some examples 429
8.23 Historical covariance and correlation 431
8.24 Implied covariance models 431
8.25 Exponentially weighted moving average model for covariances 432
8.26 Multivariate GARCH models 432
8.27 A multivariate GARCH model for the CAPM with time-varying covariances 436
8.28 Estimating a time-varying hedge ratio for FTSE stock index returns 437
8.29 Estimating multivariate GARCH models using EViews 441
Appendix: Parameter estimation using maximum likelihood 444

9 Switching models 451
9.1 Motivations 451
9.2 Seasonalities in financial markets: introduction and literature review 454
9.3 Modelling seasonality in financial data 455
9.4 Estimating simple piecewise linear functions 462
9.5 Markov switching models 464
9.6 A Markov switching model for the real exchange rate 466
9.7 A Markov switching model for the gilt–equity yield ratio 469
9.8 Threshold autoregressive models 473
9.9 Estimation of threshold autoregressive models 474
9.10 Specification tests in the context of Markov switching and threshold autoregressive models: a cautionary note 476
9.11 A SETAR model for the French franc–German mark exchange rate 477
9.12 Threshold models and the dynamics of the FTSE 100 index and index futures markets 480
9.13 A note on regime switching models and forecasting accuracy 484

10 Panel data 487
10.1 Introduction – what are panel techniques and why are they used? 487
10.2 What panel techniques are available? 489
10.3 The fixed effects model 490
10.4 Time-fixed effects models 493
10.5 Investigating banking competition using a fixed effects model 494
10.6 The random effects model 498
10.7 Panel data application to credit stability of banks in Central and Eastern Europe 499
10.8 Panel data with EViews 502
10.9 Further reading 509

1.1 Steps involved in forming an econometric model .......................... page 9
2.1 Scatter plot of two variables, y and x ........................................... 29
2.2 Scatter plot of two variables with a line of best fit chosen by eye .... 31
2.3 Method of OLS fitting a line to the data by minimising the sum of squared residuals ................................. 32
2.4 Plot of a single observation, together with the line of best fit, the residual and the fitted value ................................................. 32
2.5 Scatter plot of excess returns on fund XXX versus excess returns on the market portfolio ................................. 35
2.6 No observations close to the y-axis ................................................. 36
2.7 Effect on the standard errors of the coefficient estimates when \((x_t - \bar{x})\) are narrowly dispersed ................................................. 48
2.8 Effect on the standard errors of the coefficient estimates when \((x_t - \bar{x})\) are widely dispersed ................................................. 49
2.9 Effect on the standard errors of \(x_t^2\) large ........................................... 49
2.10 Effect on the standard errors of \(x_t^2\) small ........................................... 50
2.11 The normal distribution ............................................................... 54
2.12 The t-distribution versus the normal ............................................... 55
2.13 Rejection regions for a two-sided 5% hypothesis test ......................... 57
2.14 Rejection regions for a one-sided hypothesis test of the form \(H_0: \beta = \beta^*, H_1: \beta < \beta^*\) ..................................................... 57
2.15 Rejection regions for a one-sided hypothesis test of the form \(H_0: \beta = \beta^*, H_1: \beta > \beta^*\) ..................................................... 57
2.16 Critical values and rejection regions for a \(t_{20.5\%}\) ......................... 61
2.17 Frequency distribution of t-ratios of mutual fund alphas (gross of transactions costs) Source: Jensen (1968). Reprinted with the permission of Blackwell Publishers ................................. 68
2.18 Frequency distribution of t-ratios of mutual fund alphas (net of transactions costs) Source: Jensen (1968). Reprinted with the permission of Blackwell Publishers ................................. 68
2.19 Performance of UK unit trusts, 1979–2000 ........................................... 70
3.1 \(R^2 = 0\) demonstrated by a flat estimated line, i.e. a zero slope coefficient ................................................................. 109
3.2 \(R^2 = 1\) when all data points lie exactly on the estimated line .......... 109
4.1 Effect of no intercept on a regression line ........................................... 131
4.2 Graphical illustration of heteroscedasticity ........................................... 132
4.3 Plot of \(\hat{u}_t\) against \(\hat{u}_{t-1}\), showing positive autocorrelation ........ 141
4.4 Plot of \(\hat{u}_t\) over time, showing positive autocorrelation ................. 142
4.5 Plot of \(\hat{u}_t\) against \(\hat{u}_{t-1}\), showing negative autocorrelation ....... 142
4.6 Plot of \(\hat{u}_t\) over time, showing negative autocorrelation ................. 143
4.7 Plot of \(\hat{u}_t\) against \(\hat{u}_{t-1}\), showing no autocorrelation ............... 143
4.8 Plot of \(\hat{u}_t\) over time, showing no autocorrelation ....................... 144
4.9 Rejection and non-rejection regions for DW test ................................. 147
List of figures

4.10 A normal versus a skewed distribution 162
4.11 A leptokurtic versus a normal distribution 162
4.12 Regression residuals from stock return data, showing large outlier for October 1987 165
4.13 Possible effect of an outlier on OLS estimation 166
4.14 Plot of a variable showing suggestion for break date 185
5.1 Autocorrelation function for sample MA(2) process 215
5.2 Sample autocorrelation and partial autocorrelation functions for an MA(1) model: $y_t = -0.5y_{t-1} + u_t$ 226
5.3 Sample autocorrelation and partial autocorrelation functions for an MA(2) model: $y_t = 0.5u_{t-1} - 0.25u_{t-2} + u_t$ 226
5.4 Sample autocorrelation and partial autocorrelation functions for a slowly decaying AR(1) model: $y_t = 0.9y_{t-1} + u_t$ 227
5.5 Sample autocorrelation and partial autocorrelation functions for a more rapidly decaying AR(1) model: $y_t = 0.5y_{t-1} + u_t$ 227
5.6 Sample autocorrelation and partial autocorrelation functions for a more rapidly decaying AR(1) model with negative coefficient: $y_t = -0.5y_{t-1} + u_t$ 228
5.7 Sample autocorrelation and partial autocorrelation functions for a non-stationary model (i.e. a unit coefficient): $y_t = y_{t-1} + u_t$ 228
5.8 Sample autocorrelation and partial autocorrelation functions for an ARMA(1, 1) model: $y_t = 0.5y_{t-1} + 0.5u_{t-1} + u_t$ 229
5.9 Use of an in-sample and an out-of-sample period for analysis 245
6.1 Impulse responses and standard error bands for innovations in unexpected inflation equation errors 307
6.2 Impulse responses and standard error bands for innovations in the dividend yields 307
7.1 Value of $R^2$ for 1,000 sets of regressions of a non-stationary variable on another independent non-stationary variable 319
7.2 Value of t-ratio of slope coefficient for 1,000 sets of regressions of a non-stationary variable on another independent non-stationary variable 320
7.3 Example of a white noise process 324
7.4 Time series plot of a random walk versus a random walk with drift 324
7.5 Time series plot of a deterministic trend process 325
7.6 Autoregressive processes with differing values of $\phi$ (0, 0.8, 1) 325
8.2 The problem of local optima in maximum likelihood estimation 397
8.3 News impact curves for S&P500 returns using coefficients implied from GARCH and GJR model estimates 410
8.4 Three approaches to hypothesis testing under maximum likelihood 418
8.5 Source: Brooks, Henry and Persand (2002). Time-varying hedge ratios derived from symmetric and asymmetric BEKK models for FTSE returns. 440
9.1 Sample time series plot illustrating a regime shift 452
9.2 Use of intercept dummy variables for quarterly data 456
9.3 Use of slope dummy variables 459
9.4 Piecewise linear model with threshold $x^*$ 463
9.5 Source: Brooks and Persand (2001b). Unconditional distribution of US GEYR together with a normal distribution with the same mean and variance 470
9.6 Source: Brooks and Persand (2001b). Value of GEYR and probability that it is in the High GEYR regime for the UK 471
11.1 The fatal flaw of the linear probability model 513
11.2 The logit model 515
11.3 Modelling charitable donations as a function of income 534
11.4 Fitted values from the failure probit regression 542

1.2 Time series data \hspace{0.5cm} 4 \hspace{1cm} 4.7 Conducting a Chow test \hspace{0.5cm} 180
1.3 Log returns \hspace{0.5cm} 8 \hspace{1cm} 5.1 The stationarity condition for an AR(p) model \hspace{0.5cm} 216
1.4 Points to consider when reading a published paper \hspace{0.5cm} 11 \hspace{1cm} 5.2 The invertibility condition for an MA(2) model \hspace{0.5cm} 224
1.5 Features of EViews \hspace{0.5cm} 21 \hspace{1cm} 5.3 Naive forecasting methods \hspace{0.5cm} 247
2.1 Names for $y$ and $x$s in regression models \hspace{0.5cm} 28 \hspace{1cm} 6.1 Determining whether an equation is identified \hspace{0.5cm} 270
2.2 Reasons for the inclusion of the disturbance term \hspace{0.5cm} 30 \hspace{1cm} 6.2 Conducting a Hausman test for exogeneity \hspace{0.5cm} 274
2.3 Assumptions concerning disturbance terms and their interpretation \hspace{0.5cm} 44 \hspace{1cm} 6.3 Forecasting with VARs \hspace{0.5cm} 299
2.4 Standard error estimators \hspace{0.5cm} 48 \hspace{1cm} 7.1 Stationarity tests \hspace{0.5cm} 331
2.5 Conducting a test of significance \hspace{0.5cm} 56 \hspace{1cm} 7.2 Multiple cointegrating relationships \hspace{0.5cm} 340
2.6 Carrying out a hypothesis test using confidence intervals \hspace{0.5cm} 60 \hspace{1cm} 8.1 Testing for ‘ARCH effects’ \hspace{0.5cm} 390
2.7 The test of significance and confidence interval approaches compared \hspace{0.5cm} 61 \hspace{1cm} 8.2 Estimating an ARCH or GARCH model \hspace{0.5cm} 395
2.8 Type I and type II errors \hspace{0.5cm} 64 \hspace{1cm} 8.3 Using maximum likelihood estimation in practice \hspace{0.5cm} 398
2.9 Reasons for stock market overreactions \hspace{0.5cm} 71 \hspace{1cm} 9.1 How do dummy variables work? \hspace{0.5cm} 456
2.10 Ranking stocks and forming portfolios \hspace{0.5cm} 72 \hspace{1cm} 10.1 Fixed or random effects? \hspace{0.5cm} 500
2.11 Portfolio monitoring \hspace{0.5cm} 72 \hspace{1cm} 11.1 Parameter interpretation for probit and logit models \hspace{0.5cm} 519
3.1 The relationship between the regression $F$-statistic and $R^2$ \hspace{0.5cm} 111 \hspace{1cm} 11.2 The differences between censored and truncated dependent variables \hspace{0.5cm} 535
3.2 Selecting between models \hspace{0.5cm} 117 \hspace{1cm} 12.1 Conducting a Monte Carlo simulation \hspace{0.5cm} 548
4.1 Conducting White’s test \hspace{0.5cm} 134 \hspace{1cm} 12.2 Re-sampling the data \hspace{0.5cm} 555
4.2 ‘Solutions’ for heteroscedasticity \hspace{0.5cm} 138 \hspace{1cm} 12.3 Re-sampling from the residuals \hspace{0.5cm} 556
4.3 Conditions for DW to be a valid test \hspace{0.5cm} 148 \hspace{1cm} 12.4 Setting up a Monte Carlo simulation \hspace{0.5cm} 560
4.4 Conducting a Breusch–Godfrey test \hspace{0.5cm} 149 \hspace{1cm} 12.5 Simulating the price of an Asian option \hspace{0.5cm} 565
4.5 The Cochrane–Orcutt procedure \hspace{0.5cm} 151 \hspace{1cm} 12.6 Generating draws from a GARCH process \hspace{0.5cm} 566
