

## A Look at This Chapter

We begin our study of managerial accounting by explaining its purpose and describing its major characteristics. We also discuss cost concepts and describe how they help managers gather and organize information for making decisions. The reporting of manufacturing activities is also discussed.

## A Look Ahead

The remaining chapters discuss the types of decisions managers must make and how managerial accounting helps with those decisions. The first of these chapters, Chapter 2, considers how we measure costs assigned to certain types of projects.

# Chapter

# Managerial Accounting Concepts and Principles

## Learning Objectives

Learning Objectives are classified as conceptual, analytical, or procedural.

## CAP

### Conceptual

- C1** Explain the purpose and nature of managerial accounting. (p. 4)
- C2** Describe the lean business model. (p. 7)
- C3** Describe fraud and the role of ethics in managerial accounting. (p. 9)
- C4** Describe accounting concepts useful in classifying costs. (p. 10)
- C5** Define product and period costs and explain how they impact financial statements. (p. 11)
- C6** Explain how balance sheets and income statements for manufacturing and merchandising companies differ. (p. 13)
- C7** Explain manufacturing activities and the flow of manufacturing costs. (p. 17)

### Analytical

- A1** Compute cycle time and cycle efficiency, and explain their importance to production management (p. 20)

### Procedural

- P1** Compute cost of goods sold for a manufacturer. (p. 15)
- P2** Prepare a manufacturing statement and explain its purpose and links to financial statements. (p. 18)

LPI

## Decision Feature

# No Naked Popcorn

“Find a niche and stay focused”—Brian Taylor

A **Decision Feature** launches each chapter showing the relevance of accounting for a real entrepreneur. An **Entrepreneurial Decision problem** at the end of the assignments returns to this feature with a mini-case.

ELK GROVE VILLAGE, IL—As a hungry college student, Brian Taylor liked to eat popcorn. Lots of it. Bored with “naked popcorn,” Brian began experimenting with seasonings such as nacho cheese, cajun, jalapeño, and apple cinnamon. After he shared his concoctions with friends, dorm mates, and others, the demand for Brian’s seasonings ballooned. In less than two years, Brian had the number one shake-on popcorn seasoning in the market, **Kernel Season’s (KernelSeasons.com)**.

Brian launched Kernel Season’s with \$7,000 he earned from giving tennis lessons and selling knives. In the beginning, he gave away his popcorn seasonings to local theaters to build awareness. Just like his college friends, moviegoers loved the all-natural, low-calorie seasonings. Soon theaters across the country were asking for his seasonings, and Brian worked hard to meet demand. “I was the only employee,” explains Brian. “I made sales and shipped orders. I was figuring it out as I went along.”

Well, business is now popping. Fourteen varieties of Kernel Season’s are available in over 14,000 movie theaters and 15,000 grocery stores. Annual sales now exceed \$5 million, and Brian is on Inc.com’s “30 under 30,” a list of America’s coolest young entrepreneurs.

Brian believes college is the best time to start a new business. “Risk is low, and banks understand young entrepreneurs are trying to get things going,” explains Brian. But Brian emphasizes that understanding basic managerial principles, product and period costs, manufacturing statements, and cost flows is equally crucial. “[I was] dedicated to business classes,” says Brian, including my “accounting class.” Brian uses managerial accounting information from his production process to monitor and control costs and to assess new business opportunities, including Kernel Season’s apparel. Brian further stresses that company success and growth require him to develop budgets, monitor product performance, and make quick decisions.

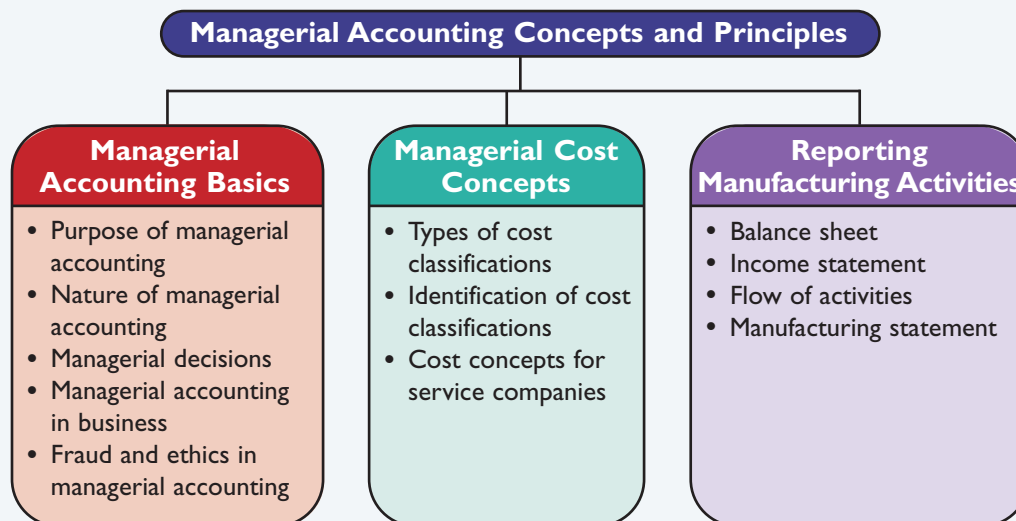

Brian believes entrepreneurs fill a void by creating a niche. However, financial success depends on monitoring and controlling operations to best meet customer needs. Brian cautions would-be entrepreneurs to “stay focused” because in the absence of applying managerial accounting principles and concepts, it’s just naked popcorn.

A **Preview** opens each chapter with a summary of topics covered.

Managerial accounting, like financial accounting, provides information to help users make better decisions. However, managerial accounting and financial accounting differ in important ways, which this chapter explains. This chapter also compares the accounting and reporting practices used by manufacturing and merchandising companies. A merchandising company sells products without changing their condition. A manufacturing

company buys raw materials and turns them into finished products for sale to customers. A third type of company earns revenues by providing services rather than products. The skills, tools, and techniques developed for measuring a manufacturing company's activities apply to service companies as well. The chapter concludes by explaining the flow of manufacturing activities and preparing the manufacturing statement.

## Managerial Accounting Basics

Key terms are printed in bold and defined again in the end-of-book glossary.

**Managerial accounting** is an activity that provides financial and nonfinancial information to an organization's managers and other internal decision makers. This section explains the purpose of managerial accounting (also called *management accounting*) and compares it with financial accounting. The main purpose of the financial accounting system is to prepare general-purpose financial statements. That information is incomplete for internal decision makers who manage organizations.

### Purpose of Managerial Accounting

The purpose of both managerial accounting and financial accounting is providing useful information to decision makers. They do this by collecting, managing, and reporting information in demand by their users. Both areas of accounting also share the common practice of reporting monetary information, although managerial accounting includes the reporting of non-monetary information. They even report some of the same information. For instance, a company's financial statements contain information useful for both its managers (insiders) and other persons interested in the company (outsiders).

The remainder of this book looks carefully at managerial accounting information, how to gather it, and how managers use it. We consider the concepts and procedures used to determine the costs of products and services as well as topics such as budgeting, break-even analysis, product costing, profit planning, and cost analysis. Information about the costs of products and services is important for many decisions that managers make. These decisions include predicting the future costs of a product or service. Predicted costs are used in product pricing, profitability analysis, and in deciding whether to make or buy a product or component. More generally, much of managerial accounting involves gathering information about costs for planning and control decisions.

**Planning** is the process of setting goals and making plans to achieve them. Companies formulate long-term strategic plans that usually span a 5- to 10-year horizon and then refine them with medium-term and short-term plans. Strategic plans usually set a firm's long-term direction by developing a road map based on opportunities such as new products, new markets, and capital investments. A strategic plan's goals and objectives are broadly defined given its long-term

**C1** Explain the purpose and nature of managerial accounting.

**Point:** Nonfinancial information, also called nonmonetary information, includes customer and employee satisfaction data, the percentage of on-time deliveries, and product defect rates.

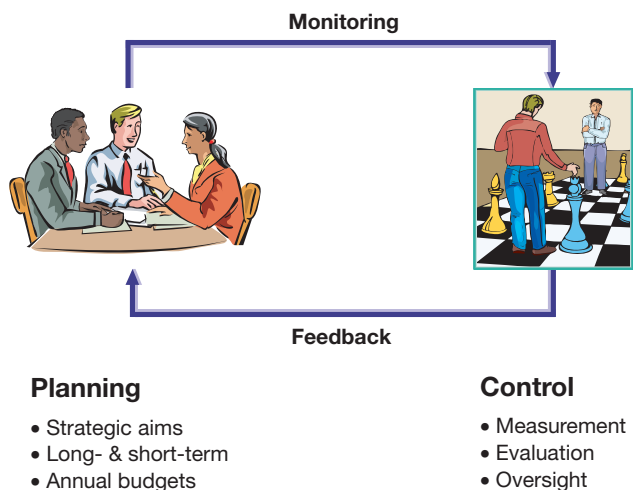

**Point:** Costs are important to managers because they impact both the financial position and profitability of a business. Managerial accounting assists in analysis, planning, and control of costs.

orientation. Medium- and short-term plans are more operational in nature. They translate the strategic plan into actions. These plans are more concrete and consist of better defined objectives and goals. A short-term plan often covers a one-year period that, when translated in monetary terms, is known as a budget.

**Control** is the process of monitoring planning decisions and evaluating an organization's activities and employees. It includes the measurement and evaluation of actions, processes, and outcomes. Feedback provided by the control function allows managers to revise their plans. Measurement of actions and processes also allows managers to take corrective actions to avoid undesirable outcomes. For example, managers periodically compare actual results with planned results. Exhibit 1.1 portrays the important management functions of planning and control.

Video 1.1

**EXHIBIT 1.1**

Planning and Control

*Infographics reinforce key concepts through visual learning.*

Managers use information to plan and control business activities. In later chapters, we explain how managers also use this information to direct and improve business operations.

**Nature of Managerial Accounting**

Managerial accounting has its own special characteristics. To understand these characteristics, we compare managerial accounting to financial accounting; they differ in at least seven important ways. These differences are summarized in Exhibit 1.2. This section discusses each of these characteristics.

**EXHIBIT 1.2**

Key Differences between Managerial Accounting and Financial Accounting

	Financial Accounting	Managerial Accounting
1. Users and decision makers	Investors, creditors, and other users external to the organization	Managers, employees, and decision makers internal to the organization
2. Purpose of information	Assist external users in making investment, credit, and other decisions	Assist managers in making planning and control decisions
3. Flexibility of practice	Structured and often controlled by GAAP	Relatively flexible (no GAAP constraints)
4. Timeliness of information	Often available only after an audit is complete	Available quickly without the need to wait for an audit
5. Time dimension	Focus on historical information with some predictions	Many projections and estimates; historical information also presented
6. Focus of information	Emphasis on whole organization	Emphasis on an organization's projects, processes, and subdivisions
7. Nature of information	Monetary information	Mostly monetary; but also nonmonetary information

**Point:** It is desirable to accumulate information for management reports in a database separate from financial accounting records.

**Margin notes** further enhance the textual material.

**Point:** The Institute of Management Accountants issues statements that govern the practice of managerial accounting. Accountants who pass a qualifying exam are awarded the CMA.

**Point:** Financial statements are usually issued several weeks after the period-end. GAAP requires the reporting of important events that occur while the statements are being prepared. These events are called *subsequent events*.

**Point:** Independent auditors test the integrity of managerial accounting records when they are used in preparing financial statements.

**Users and Decision Makers** Companies accumulate, process, and report financial accounting and managerial accounting information for different groups of decision makers. Financial accounting information is provided primarily to external users including investors, creditors, analysts, and regulators. External users rarely have a major role in managing a company's daily activities. Managerial accounting information is provided primarily to internal users who are responsible for making and implementing decisions about a company's business activities.

**Purpose of Information** Investors, creditors, and other external users of financial accounting information must often decide whether to invest in or lend to a company. If they have already done so, they must decide whether to continue owning the company or carrying the loan. Internal decision makers must plan a company's future. They seek to take advantage of opportunities or to overcome obstacles. They also try to control activities and ensure their effective and efficient implementation. Managerial accounting information helps these internal users make both planning and control decisions.

**Flexibility of Practice** External users compare companies by using financial reports and need protection against false or misleading information. Accordingly, financial accounting relies on accepted principles that are enforced through an extensive set of rules and guidelines, or GAAP. Internal users need managerial accounting information for planning and controlling their company's activities rather than for external comparisons. They require different types of information depending on the activity. This makes standardizing managerial accounting systems across companies difficult. Instead, managerial accounting systems are flexible. The design of a company's managerial accounting system depends largely on the nature of the business and the arrangement of its internal operations. Managers can decide for themselves what information they want and how they want it reported. Even within a single company, different managers often design their own systems to meet their special needs. The important question a manager must ask is whether the information being collected and reported is useful for planning, decision making, and control purposes.

**Timeliness of Information** Formal financial statements reporting past transactions and events are not immediately available to outside parties. Independent certified public accountants often must *audit* a company's financial statements before it provides them to external users. Thus, because audits often take several weeks to complete, financial reports to outsiders usually are not available until well after the period-end. However, managers can quickly obtain managerial accounting information. External auditors need not review it. Estimates and projections are acceptable. To get information quickly, managers often accept less precision in reports. As an example, an early internal report to management prepared right after the year-end could report net income for the year between \$4.2 and \$4.8 million. An audited income statement could later show net income for the year at \$4.6 million. The internal report is not precise, but its information can be more useful because it is available earlier.

*Internal auditing* plays an important role in managerial accounting. Internal auditors evaluate the flow of information not only inside but also outside the company. Managers are responsible for preventing and detecting fraudulent activities in their companies.

**Time Dimension** To protect external users from false expectations, financial reports deal primarily with results of both past activities and current conditions. While some predictions such as service lives and salvage values of plant assets are necessary, financial accounting avoids predictions whenever possible. Managerial accounting regularly includes predictions of conditions and events. As an example, one important managerial accounting report is a budget, which predicts revenues, expenses, and other items. If managerial accounting reports were restricted to the past and present, managers would be less able to plan activities and less effective in managing and evaluating current activities.

**Focus of Information** Companies often organize into divisions and departments, but investors rarely can buy shares in one division or department. Nor do creditors lend money to a company's single division or department. Instead, they own shares in or make loans to the entire company. Financial accounting focuses primarily on a company as a whole as depicted in Exhibit 1.3.

## EXHIBIT 1.3

### Focus of External Reports

The focus of managerial accounting is different. While top-level managers are responsible for managing the whole company, most other managers are responsible for much smaller sets of activities. These middle-level and lower-level managers need managerial accounting reports dealing with specific activities, projects, and subdivisions for which they are responsible. For instance, division sales managers are directly responsible only for the results achieved in their divisions. Accordingly, division sales managers need information about results achieved in their own divisions to improve their performance. This information includes the level of success achieved by each individual, product, or department in each division as depicted in Exhibit 1.4.

## EXHIBIT 1.4

Focus of Internal Reports

**Nature of Information** Both financial and managerial accounting systems report monetary information. Managerial accounting systems also report considerable nonmonetary information. Monetary information is an important part of managerial decisions, and nonmonetary information plays a crucial role, especially when monetary effects are difficult to measure. Common examples of nonmonetary information are the quality and delivery criteria of purchasing decisions.

**Decision Ethics** boxes are role-playing exercises that stress ethics in accounting and business.

## Decision Ethics

**Production Manager** You invite three friends to a restaurant. When the dinner check arrives, David, a self-employed entrepreneur, picks it up saying, "Here, let me pay. I'll deduct it as a business expense on my tax return." Denise, a salesperson, takes the check from David's hand and says, "I'll put this on my company's credit card. It won't cost us anything." Derek, a factory manager for a company, laughs and says, "Neither of you understands. I'll put this on my company's credit card and call it overhead on a cost-plus contract my company has with a client." (*A cost-plus contract means the company receives its costs plus a percent of those costs.*) Adds Derek, "That way, my company pays for dinner and makes a profit." Who should pay the bill? Why? [Answer—p. 26]

## Managerial Decision Making

The previous section emphasized differences between financial and managerial accounting, but they are not entirely separate. Similar information is useful to both external and internal users. For instance, information about costs of manufacturing products is useful to all users in making decisions. Also, both financial and managerial accounting affect peoples' actions. For example, **Trek's** design of a sales compensation plan affects the behavior of its salesforce. It also must estimate the dual effects of promotion and sales compensation plans on buying patterns of customers. These estimates impact the equipment purchase decisions for manufacturing and can affect the supplier selection criteria established by purchasing. Thus, financial and managerial accounting systems do more than measure; they also affect people's decisions and actions.

## Managerial Accounting in Business

We have explained the importance of managerial accounting for internal decision making. Although the analytical tools and techniques of managerial accounting have always been useful, their relevance and importance continue to increase. This is so because of changes in the business environment. This section describes some of these changes and their impact on managerial accounting.

**C2** Describe the lean business model.

**Lean Business Model** Two important factors have encouraged companies to be more effective and efficient in running their operations. First, there is an increased emphasis on *customers* as the most important constituent of a business. Customers expect to derive a certain value for the money they spend to buy products and services. Specifically, they expect that their suppliers will offer them the right service (or product) at the right time and the right price. This implies that companies accept the notion of **customer orientation**, which means that employees

understand the changing needs and wants of their customers and align their management and operating practices accordingly.

Second, our *global economy* expands competitive boundaries, thereby providing customers more choices. The global economy also produces changes in business activities. One notable case that reflects these changes in customer demand and global competition is auto manufacturing. The top three Japanese auto manufacturers (**Honda**, **Nissan**, and **Toyota**) once controlled more than 40% of the U.S. auto market. Customers perceived that Japanese auto manufacturers provided value not available from other manufacturers. Many European

and North American auto manufacturers responded to this challenge and regained much of the lost market share.

Companies must be alert to these and other factors. Many companies have responded by adopting the **lean business model**, whose goal is to *eliminate waste* while “satisfying the customer” and “providing a positive return” to the company.

**Lean Practices** **Continuous improvement** rejects the notions of “good enough” or “acceptable” and challenges employees and managers to continuously experiment with new and improved business practices. This has led companies to adopt practices such as total quality management (TQM) and just-in-time (JIT) manufacturing. The philosophy underlying both practices is continuous improvement; the difference is in the focus.

**Total quality management** focuses on quality improvement and applies this standard to all aspects of business activities. In doing so, managers and employees seek to uncover waste in business activities including accounting activities such as payroll and disbursements. To encourage an emphasis on quality, the U.S. Congress established the Malcolm Baldrige National Quality Award (MBQNA). Entrants must conduct a thorough analysis and evaluation of their business using guidelines from the Baldrige committee. **Ritz Carlton Hotel** is a recipient of the Baldrige award in the service category. The company applies a core set of values, collectively called *The Gold Standards*, to improve customer service.

**Just-in-time manufacturing** is a system that acquires inventory and produces only when needed. An important aspect of JIT is that companies manufacture products only after they receive an order (a *demand-pull* system) and then deliver the customer’s requirements on time. This means that processes must be aligned to eliminate any delays and inefficiencies including inferior inputs and outputs. Companies must also establish good relations and communications with their suppliers. On the downside, JIT is more susceptible to disruption than traditional systems. As one example, several **General Motors** plants were temporarily shut down due to a strike at an assembly division; the plants supplied components *just in time* to the assembly division.

**Point:** Goals of a TQM process include reduced waste, better inventory control, fewer defects, and continuous improvement. Just-in-time concepts have similar goals.

**Point:** The time between buying raw materials and selling finished goods is called *throughput time*.

**Decision Insight** boxes highlight relevant items from practice.

### Decision Insight

**Global Lean** **Toyota Motor Corporation** pioneered lean manufacturing, and it has since spread to other manufacturers throughout the world. The goals include improvements in quality, reliability, inventory turnover, productivity, exports, and—above all—sales and income.

**Implications for Managerial Accounting** Adopting the lean business model can be challenging because to foster its implementation, all systems and procedures that a company follows must be realigned. Managerial accounting has an important role to play by providing accurate cost and performance information. Companies must understand the nature and sources of cost and must develop systems that capture costs accurately. Developing such a system is important to measuring the “value” provided to customers. The price that customers pay for

Video 1.3

acquiring goods and services is an important determinant of value. In turn, the costs a company incurs are key determinants of price. All else being equal, the better a company is at controlling its costs, the better its performance.

## Decision Insight

**Balanced Scorecard** The *balanced scorecard* aids continuous improvement by augmenting financial measures with information on the “drivers” (indicators) of future financial performance along four dimensions: (1) *financial*—profitability and risk, (2) *customer*—value creation and product and service differentiation, (3) *internal business processes*—business activities that create customer and owner satisfaction, and (4) *learning and growth*—organizational change, innovation, and growth.

## Fraud and Ethics in Managerial Accounting

Fraud, and the role of ethics in reducing fraud, are important factors in running business operations. Fraud involves the use of one’s job for personal gain through the deliberate misuse of the employer’s assets. Examples include theft of the employer’s cash or other assets, overstating reimbursable expenses, payroll schemes, and financial statement fraud. Fraud affects all business and it is costly: A 2006 *Report to the Nation* from the Association of Certified Fraud Examiners estimates the average U.S. business loses 5% of its annual revenues to fraud.

The most common type of fraud, where employees steal or misuse the employer’s resources, results in an average loss of \$150,000 per occurrence. For example, in a billing fraud, an employee sets up a bogus supplier. The employee then prepares bills from the supplier and pays these bills from the employer’s checking account. The employee cashes the checks sent to the bogus supplier and uses them for his or her own personal benefit.

Although there are many types of fraud schemes, all fraud

- Is done to provide direct or indirect benefit to the employee.
- Violates the employee’s duties to his employer.
- Costs the employer money.
- Is secret.

**Implications for Managerial Accounting** Fraud increases a business’s costs. Left undetected, these inflated costs can result in poor pricing decisions, an improper product mix, and faulty performance evaluations. Management can develop accounting systems to closely track costs and identify deviations from expected amounts. In addition, managers rely on an **internal control system** to monitor and control business activities. An internal control system is the policies and procedures managers use to

- Urge adherence to company policies.
- Promote efficient operations.
- Ensure reliable accounting.
- Protect assets.

Combating fraud and other dilemmas requires ethics in accounting. **Ethics** are beliefs that distinguish right from wrong. They are accepted standards of good and bad behavior. Identifying the ethical path can be difficult. The preferred path is a course of action that avoids casting doubt on one’s decisions.

The **Institute of Management Accountants** (IMA), the professional association for management accountants, has issued a code of ethics to help accountants involved in solving ethical dilemmas. The IMA’s Statement of Ethical Professional Practice requires that management accountants be competent, maintain confidentiality, act with integrity, and communicate information in a fair and credible manner.

The IMA provides a “road map” for resolving ethical conflicts. It suggests that an employee follow the company’s policies on how to resolve such conflicts. If the conflict remains unresolved, an employee should contact the next level of management (such as the immediate supervisor) who is not involved in the ethical conflict.

**C3** Describe fraud and the role of ethics in managerial accounting.

**Point:** The IMA also issues the Certified Management Accountant (CMA) and the Certified Financial Manager (CFM) certifications. Employees with the CMA or CFM certifications typically earn higher salaries than those without.

**Point:** The **Sarbanes-Oxley Act** requires each issuer of securities to disclose whether it has adopted a code of ethics for its senior officers and the content of that code.

**Quick Check**

Answers—p. 27

**Quick Check** is a chance to stop and reflect on key points.

1. Managerial accounting produces information (a) to meet internal users' needs, (b) to meet a user's specific needs, (c) often focusing on the future, or (d) all of these.
2. What is the difference between the intended users of financial and managerial accounting?
3. Do generally accepted accounting principles (GAAP) control and dictate managerial accounting?
4. What is the basic objective for a company practicing total quality management?

**Managerial Cost Concepts**

**C4** Describe accounting concepts useful in classifying costs.

An organization incurs many different types of costs that are classified differently, depending on management needs (different costs for different purposes). We can classify costs on the basis of their (1) behavior, (2) traceability, (3) controllability, (4) relevance, and (5) function. This section explains each concept for assigning costs to products and services.

**Types of Cost Classifications**

**Classification by Behavior** At a basic level, a cost can be classified as fixed or variable. A **fixed cost** does not change with changes in the volume of activity (within a range of activity known as an activity's *relevant range*). For example, straight-line depreciation on equipment is a fixed cost. A **variable cost** changes in proportion to changes in the volume of activity. Sales commissions computed as a percent of sales revenue are variable costs. Additional examples of fixed and variable costs for a bike manufacturer are provided in Exhibit 1.5. When cost items are combined, total cost can be fixed, variable, or mixed. *Mixed* refers to a combination of fixed and variable costs. Equipment rental often includes a fixed cost for some minimum amount and a variable cost based on amount of usage. Classification of costs by behavior is helpful in cost-volume-profit analyses and short-term decision making. We discuss these in Chapters 5 and 10.

Video 1.2

**EXHIBIT 1.5**

Fixed and Variable Costs

**Fixed Cost:** Rent for Rocky Mountain Bikes' building is \$22,000, and it doesn't change with the number of bikes produced.

**Variable Cost:** Cost of bicycle tires is variable with the number of bikes produced—this cost is \$15 per pair.

**Classification by Traceability** A cost is often traced to a **cost object**, which is a product, process, department, or customer to which costs are assigned. **Direct costs** are those traceable to a single cost object. For example, if a product is a cost object, its material and labor costs are usually directly traceable. **Indirect costs** are those that cannot be easily and cost-beneficially traced to a single cost object. An example of an indirect cost is a maintenance plan that benefits two or more departments. Exhibit 1.6 identifies examples of both direct and indirect costs for the maintenance department in a manufacturing plant. Thus, salaries of Rocky Mountain Bikes' maintenance department employees are considered indirect if the cost object is bicycles and direct if the cost object is the maintenance department. Classification of costs by traceability is useful for cost allocation. This is discussed in Chapter 9.

**Decision Maker**

**Entrepreneur** You wish to trace as many of your assembly department's direct costs as possible. You can trace 90% of them in an economical manner. To trace the other 10%, you need sophisticated and costly accounting software. Do you purchase this software? [Answer—p. 26]

**Direct Costs**

- Salaries of maintenance department employees
- Equipment purchased by maintenance department
- Materials purchased by maintenance department
- Maintenance department equipment depreciation

**Indirect Costs**

- Factory accounting
- Factory administration
- Factory rent
- Factory managers' salary
- Factory light and heat
- Factory internal audit
- Factory intranet
- Insurance on factory

**EXHIBIT 1.6**

Direct and Indirect Costs of a Maintenance Department

**Classification by Controllability** A cost can be defined as **controllable** or **not controllable**. Whether a cost is controllable or not depends on the employee's responsibilities, as shown in Exhibit 1.7. This is referred to as *hierarchical levels* in management, or *pecking order*. For example, investments in machinery are controllable by upper-level managers but not lower-level managers. Many daily operating expenses such as overtime often are controllable by lower-level managers. Classification of costs by controllability is especially useful for assigning responsibility to and evaluating managers.

**Senior Manager**  
Controls costs of investments in land, buildings, and equipment.

**Supervisor**  
Controls daily expenses such as supplies, maintenance, and overtime.

**EXHIBIT 1.7**

Controllability of Costs

**Classification by Relevance** A cost can be classified by relevance by identifying it as either a sunk cost or an out-of-pocket cost. A **sunk cost** has already been incurred and cannot be avoided or changed. It is irrelevant to future decisions. One example is the cost of a company's office equipment previously purchased. An **out-of-pocket cost** requires a future outlay of cash and is relevant for decision making. Future purchases of equipment involve out-of-pocket costs. A discussion of relevant costs must also consider opportunity costs. An **opportunity cost** is the potential benefit lost by choosing a specific action from two or more alternatives. One example is a student giving up wages from a job to attend evening classes. Consideration of opportunity cost is important when, for example, an insurance company must decide whether to outsource its payroll function or maintain it internally. This is discussed in Chapter 10.

**Classification by Function** Another cost classification (for manufacturers) is capitalization as inventory or to expense as incurred. Costs capitalized as inventory are called **product costs**, which refer to expenditures necessary and integral to finished products. They include direct materials, direct labor, and indirect manufacturing costs called *overhead costs*. Product costs pertain to activities carried out to manufacture the product. Costs expensed are called **period costs**, which refer to expenditures identified more with a time period than with finished products. They include selling and general administrative expenses. Period costs pertain to activities that are not part of the manufacturing process. A distinction between product and period costs is important because period costs are expensed in the income statement and product costs are assigned to inventory on the balance sheet until that inventory is sold. An ability to understand and identify product costs and period costs is crucial to using and interpreting a *manufacturing statement* described later in this chapter.

Exhibit 1.8 shows the different effects of product and period costs. Period costs flow directly to the current income statement as expenses. They are not reported as assets. Product costs are first assigned to inventory. Their final treatment depends on when inventory is sold or disposed of. Product costs assigned to finished goods that are sold in year 2009 are reported on the 2009 income statement as part of cost of goods sold. Product costs assigned to unsold inventory are carried forward on the balance sheet at the end of year 2009. If this inventory is sold in year 2010, product costs assigned to it are reported as part of cost of goods sold in that year's income statement.

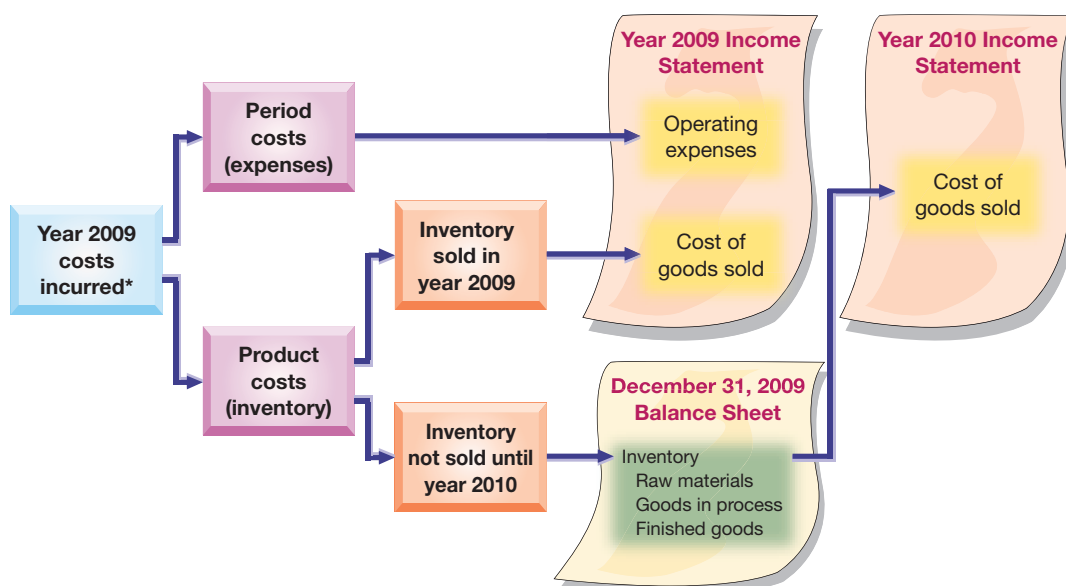

**Point:** Opportunity costs are not recorded by the accounting system.

**C5** Define product and period costs and explain how they impact financial statements.

**Point:** Only costs of production and purchases are classed as product costs.

**EXHIBIT 1.8**

Period and Product Costs in Financial Statements

\* This diagram excludes costs to acquire assets other than inventory.

**Point:** Product costs are either in the income statement as part of cost of goods sold or in the balance sheet as inventory. Period costs appear only on the income statement under operating expenses. See Exhibit 1.8.

**Point:** For a team approach to identifying period and product costs, see *Teamwork in Action* in the *Beyond the Numbers* section.

The difference between period and product costs explains why the year 2009 income statement does not report operating expenses related to either factory workers’ wages or depreciation on factory buildings and equipment. Instead, both costs are combined with the cost of raw materials to compute the product cost of finished goods. A portion of these manufacturing costs (related to the goods sold) is reported in the year 2009 income statement as part of Cost of Goods Sold. The other portion is reported on the balance sheet at the end of that year as part of Inventory. The portion assigned to inventory could be included in any or all of raw materials, goods in process, or finished goods inventories.

**Decision Maker**

**Decision Maker boxes** are role-playing exercises that stress the relevance of accounting.

**Purchase Manager** You are evaluating two potential suppliers of seats for the manufacturing of motorcycles. One supplier (A) quotes a \$145 price per seat and ensures 100% quality standards and on-time delivery. The second supplier (B) quotes a \$115 price per seat but does not give any written assurances on quality or delivery. You decide to contract with the second supplier (B), saving \$30 per seat. Does this decision have opportunity costs? [Answer—p. 27]

**Identification of Cost Classifications**

It is important to understand that a cost can be classified using any one (or combination) of the five different means described here. To do this we must understand costs and operations. Specifically, for the five classifications, we must be able to identify the *activity* for behavior, *cost object* for traceability, *management hierarchical level* for controllability, *opportunity cost* for relevance, and *benefit period* for function. Factory rent, for instance, can be classified as a product cost; it is fixed with respect to number of units produced, it is indirect with respect to the product, and it is not controllable by a production supervisor. Potential multiple classifications are shown in Exhibit 1.9 using different cost items incurred in manufacturing mountain bikes. The finished bike is the cost object. Proper allocation of these costs and the managerial decisions based on cost data depend on a correct cost classification.

**Cost Concepts for Service Companies**

The cost concepts described are generally applicable to service organizations. For example, consider **Southwest Airlines**. Its cost of beverages for passengers is a variable cost based on number of passengers. The cost of leasing an aircraft is fixed with respect to number of passengers. We can also trace a flight crew’s salary to a specific flight whereas we likely

**Point:** All expenses of service companies are period costs because these companies do not have inventory.

Cost Item	By Behavior	By Traceability	By Function
Bicycle tires . . . . .	Variable	Direct	Product
Wages of assembly worker* . . . . .	Variable	Direct	Product
Advertising . . . . .	Fixed	Indirect	Period
Production manager's salary . . . . .	Fixed	Indirect	Product
Office depreciation . . . . .	Fixed	Indirect	Period

\* Although an assembly worker's wages are classified as variable costs, their actual behavior depends on how workers are paid and whether their wages are based on a union contract (such as piece rate or monthly wages).

**EXHIBIT 1.9**

Examples of Multiple Cost Classifications

cannot trace wages for the ground crew to a specific flight. Classification by function (such as product versus period costs) is not relevant to service companies because services are not inventoried. Instead, costs incurred by a service firm are expensed in the reporting period when incurred.

Managers in service companies must understand and apply cost concepts. They seek and rely on accurate cost estimates for many decisions. For example, an airline manager must often decide between canceling or rerouting flights. The manager must also be able to estimate costs saved by canceling a flight versus rerouting. Knowledge of fixed costs is equally important. We explain more about the cost requirements for these and other managerial decisions in Chapter 10.

**Service Costs**

- Beverages and snacks
- Cleaning fees
- Pilot and copilot salaries
- Attendant salaries
- Fuel and oil costs
- Travel agent fees
- Ground crew salaries

**Quick Check** Answers—p. 27

5. Which type of cost behavior increases total costs when volume of activity increases?
6. How could traceability of costs improve managerial decisions?

**Reporting Manufacturing Activities**

Companies with manufacturing activities differ from both merchandising and service companies. The main difference between merchandising and manufacturing companies is that merchandisers buy goods ready for sale while manufacturers produce goods from materials and labor. **Payless** is an example of a merchandising company. It buys and sells shoes without physically changing them. **Adidas** is primarily a manufacturer of shoes, apparel, and accessories. It purchases materials such as leather, cloth, dye, plastic, rubber, glue, and laces and then uses employees' labor to convert these materials to products. **Southwest Airlines** is a service company that transports people and items.

*Real company names are printed in bold magenta.*

Manufacturing activities differ from both selling merchandise and providing services. Also, the financial statements for manufacturing companies differ slightly. This section considers some of these differences and compares them to accounting for a merchandising company.

**Manufacturer's Balance Sheet**

Manufacturers carry several unique assets and usually have three inventories instead of the single inventory that merchandisers carry. Exhibit 1.10 shows three different inventories in the current asset section of the balance sheet for Rocky Mountain Bikes, a manufacturer. The three inventories are raw materials, goods in process, and finished goods.

**C6** Explain how balance sheets and income statements for manufacturing and merchandising companies differ.

**Raw Materials Inventory** Raw materials inventory refers to the goods a company acquires to use in making products. It uses raw materials in two ways: directly and indirectly. Most raw materials physically become part of a product and are identified with specific units or batches of a product. Raw materials used directly in a product are called *direct materials*. Other materials used to support production processes are sometimes not as clearly identified with specific units or batches of product. These materials are called **indirect materials** because they are not clearly identified with specific product units or batches. Items used as indirect materials often appear on a

**Point:** Reducing the size of inventories saves storage costs and frees money for other uses.

**EXHIBIT 1.10**

Balance Sheet for a Manufacturer

Total assets .....	<u>\$248,900</u>		

balance sheet as factory supplies or are included in raw materials. Some direct materials are classified as indirect materials when their costs are low (insignificant). Examples include screws and nuts used in assembling mountain bikes and staples and glue used in manufacturing shoes. Using

**Inventories of Rocky Mountain Bikes**

the *materiality principle*, individually tracing the costs of each of these materials and classifying them separately as direct materials does not make much economic sense. For instance, keeping detailed records of the amount of glue used to manufacture one shoe is not cost beneficial.

**Goods in Process Inventory** Another inventory held by manufacturers is **goods in process inventory**, also called *work in process inventory*. It consists of products in the process of being manufactured but not yet complete. The amount of goods in process inventory depends on the type of production process. If the time required to produce a unit of product is short, the goods in process inventory is likely small; but if weeks or months are needed to produce a unit, the goods in process inventory is usually larger.

**Finished Goods Inventory** A third inventory owned by a manufacturer is **finished goods inventory**, which consists of completed products ready for sale. This inventory is similar to merchandise inventory owned by a merchandising company. Manufacturers also often own unique plant assets such as small tools, factory buildings, factory equipment, and patents to manufacture products. The balance sheet in Exhibit 1.10 shows that Rocky Mountain Bikes owns all of these assets. Some manufacturers invest millions or even billions of dollars in production facilities and patents. **Briggs & Stratton's** recent balance sheet shows about \$1 billion net investment in land, buildings, machinery and equipment, much of which involves production facilities. It manufactures more racing engines than any other company in the world.

## Manufacturer's Income Statement

The main difference between the income statement of a manufacturer and that of a merchandiser involves the items making up cost of goods sold. Exhibit 1.11 compares the components of cost of goods sold for a manufacturer and a merchandiser. A merchandiser adds cost of goods purchased to beginning merchandise inventory and then subtracts ending merchandise inventory to get cost of goods sold. A manufacturer adds cost of goods manufactured to beginning finished goods inventory and then subtracts ending finished goods inventory to get cost of goods sold.

**P1** Compute cost of goods sold for a manufacturer.

### EXHIBIT 1.11

Cost of Goods Sold Computation

A merchandiser often uses the term *merchandise* inventory; a manufacturer often uses the term *finished goods* inventory. A manufacturer's inventories of raw materials and goods in process are not included in finished goods because they are not available for sale. A manufacturer also shows cost of goods *manufactured* instead of cost of goods *purchased*. This difference occurs because a manufacturer produces its goods instead of purchasing them ready for sale. We show later in this chapter how to derive cost of goods manufactured from the manufacturing statement.

The Cost of Goods Sold sections for both a merchandiser (Tele-Mart) and a manufacturer (Rocky Mountain Bikes) are shown in Exhibit 1.12 to highlight these differences. The remaining income statement sections are similar.

### EXHIBIT 1.12

Cost of Goods Sold for a Merchandiser and Manufacturer

Merchandising (Tele-Mart) Company		Manufacturing (Rocky Mtn. Bikes) Company	
Cost of goods sold		Cost of goods sold	
<b>Beginning merchandise inventory</b> .....	\$ 14,200	<b>Beginning finished goods inventory</b> .....	\$ 11,200
<b>Cost of merchandise purchased</b> .....	<u>234,150</u>	<b>Cost of goods manufactured*</b> .....	<u>170,500</u>
Goods available for sale .....	248,350	Goods available for sale .....	181,700
<b>Less ending merchandise inventory</b> .....	<u>12,100</u>	<b>Less ending finished goods inventory</b> .....	<u>10,300</u>
Cost of goods sold .....	<u>\$236,250</u>	Cost of goods sold .....	<u>\$171,400</u>

\* Cost of goods manufactured is reported in the income statement of Exhibit 1.14.

Although the cost of goods sold computations are similar, the numbers in these computations reflect different activities. A merchandiser's cost of goods purchased is the cost of buying products to be sold. A manufacturer's cost of goods manufactured is the sum of direct materials, direct labor, and factory overhead costs incurred in producing products. The remainder of this section further explains these three manufacturing costs and describes prime and conversion costs.

**Direct Materials** Direct materials are tangible components of a finished product. **Direct material costs** are the expenditures for direct materials that are separately and readily traced through the manufacturing process to finished goods. Examples of direct materials in manu-

**Typical Manufacturing Costs in Today's Products**

facturing a mountain bike include its tires, seat, frame, pedals, brakes, cables, gears, and handlebars. The chart in the margin shows that direct materials generally make up about 45% of manufacturing costs in today's products, but this amount varies across industries and companies.

**Direct Labor** Direct labor refers to the efforts of employees who physically convert materials to finished product. **Direct labor costs** are the wages and salaries for direct labor that are separately and readily traced through the manufacturing process to finished goods. Examples of direct labor in manufacturing a mountain bike include operators directly involved in converting raw materials into finished products (welding, painting, forming) and assembly workers who attach materials such as tires, seats, pedals, and brakes to the bike frames. Costs of other workers on the assembly line who assist direct laborers are classified as **indirect labor costs**. **Indirect labor** refers to manufacturing workers' efforts not linked to specific units or batches of the product.

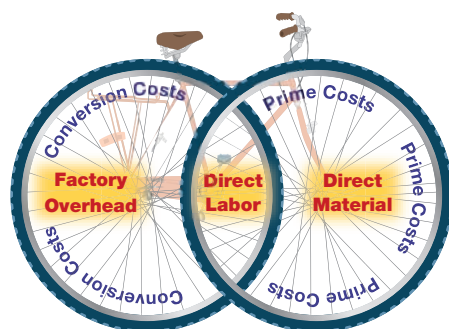

**Point:** Indirect labor costs are part of factory overhead.

**Factory Overhead** Factory overhead consists of all manufacturing costs that are not direct materials or direct labor. **Factory overhead costs** cannot be separately or readily traced to finished goods. These costs include indirect materials and indirect labor, costs not directly traceable to the product. Overtime paid to direct laborers is also included in overhead because overtime is due to delays, interruptions, or constraints not necessarily identifiable to a specific product or batches of product. Factory overhead costs also include maintenance of the mountain bike factory, supervision of its employees, repairing manufacturing equipment, factory utilities (water, gas, electricity), production manager's salary, factory rent, depreciation on factory buildings and equipment, factory insurance, property taxes on factory buildings and equipment, and factory accounting and legal services. Factory overhead does *not* include selling and administrative expenses because they are not incurred in manufacturing products. These expenses are called *period costs* and are recorded as expenses on the income statement when incurred.

**Point:** Factory overhead is also called manufacturing overhead.

**EXHIBIT 1.13**

Prime and Conversion Costs and Their Makeup

**Point:** Prime costs = Direct materials + Direct labor.  
Conversion costs = Direct labor + Factory overhead.

**Prime and Conversion Costs** Direct material costs and direct labor costs are also called **prime costs**—expenditures directly associated with the manufacture of finished goods. Direct labor costs and overhead costs are called **conversion costs**—expenditures incurred in the process of converting raw materials to finished goods. Direct labor costs are considered both prime costs and conversion costs. Exhibit 1.13 conveys the relation between prime and conversion costs and their components of direct material, direct labor, and factory overhead.

**Reporting Performance** Exhibit 1.14 shows the income statement for Rocky Mountain Bikes. Its operating expenses include sales salaries, office salaries, and depreciation of delivery and office equipment. Operating expenses do not include manufacturing costs such as factory workers' wages and depreciation of production equipment and the factory buildings. These manufacturing costs are reported as part of cost of goods manufactured and included in cost of goods sold. We explained why and how this is done in the section "Classification by Function."

**Point:** Manufacturers treat costs such as depreciation and rent as product costs if they are related to manufacturing.

**ROCKY MOUNTAIN BIKES**

Income Statement for a Manufacturer

**Quick Check**

Answers—p. 27

7. What are the three types of inventory on a manufacturing company's balance sheet?
8. How does cost of goods sold differ for merchandising versus manufacturing companies?

**Flow of Manufacturing Activities**

To understand manufacturing and its reports, we must first understand the flow of manufacturing activities and costs. Exhibit 1.15 shows the flow of manufacturing activities for a manufacturer. This exhibit has three important sections: *materials activity*, *production activity*, and *sales activity*. We explain each activity in this section.

**Materials Activity** The far left side of Exhibit 1.15 shows the flow of raw materials. Manufacturers usually start a period with some beginning raw materials inventory carried over from the previous period. The company then acquires additional raw materials in the current period. Adding these purchases to beginning inventory gives total raw materials available for use in production. These raw materials are then either used in production in the current period or remain in inventory at the end of the period for use in future periods.

**Production Activity** The middle section of Exhibit 1.15 describes production activity. Four factors come together in production: beginning goods in process inventory, direct materials,

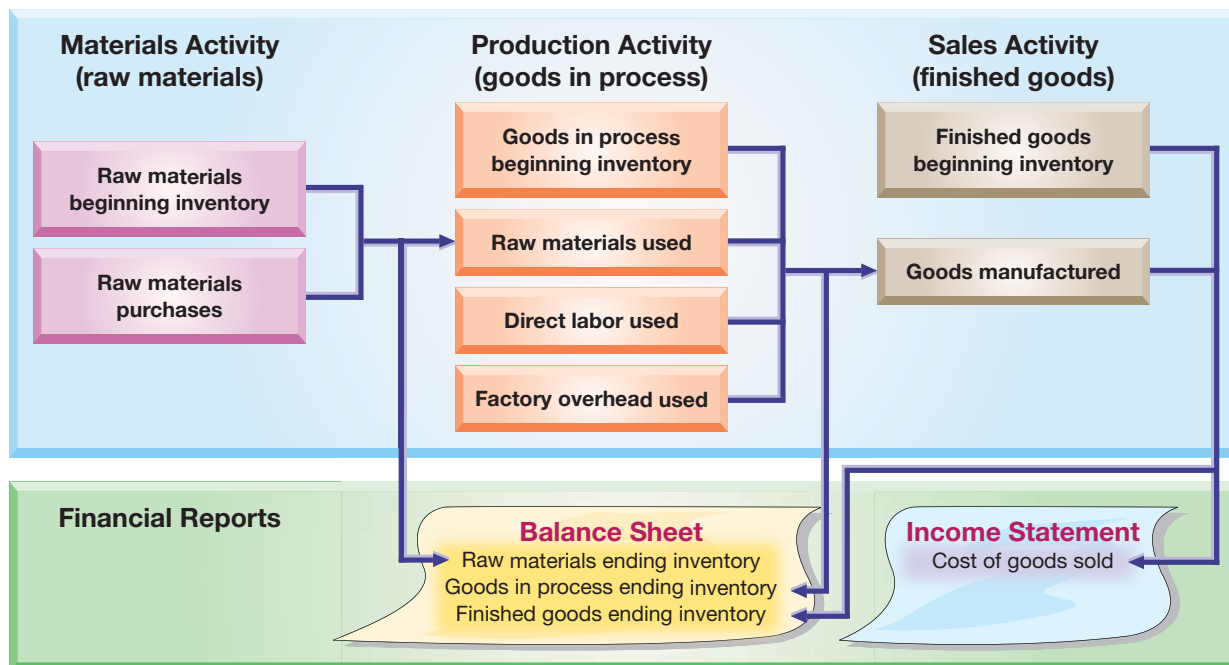

**C7** Explain manufacturing activities and the flow of manufacturing costs.

**Point:** Knowledge of managerial accounting provides us a means of measuring manufacturing costs and is a sound foundation for studying advanced business topics.

**EXHIBIT 1.15**

## Activities and Cost Flows in Manufacturing

**Point:** The series of activities that add value to a company's products or services is called a **value chain**.

direct labor, and overhead. Beginning goods in process inventory consists of partly assembled products from the previous period. Production activity results in products that are either finished or remain unfinished. The cost of finished products makes up the cost of goods manufactured for the current period. Unfinished products are identified as ending goods in process inventory. The cost of unfinished products consists of direct materials, direct labor, and factory overhead, and is reported on the current period's balance sheet. The costs of both finished goods manufactured and goods in process are *product costs*.

**Sales Activity** The company's sales activity is portrayed in the far right side of Exhibit 1.15. Newly completed units are combined with beginning finished goods inventory to make up total finished goods available for sale in the current period. The cost of finished products sold is reported on the income statement as cost of goods sold. The cost of products not sold is reported on the current period's balance sheet as ending finished goods inventory.

## Manufacturing Statement

**P2** Prepare a manufacturing statement and explain its purpose and links to financial statements.

A company's manufacturing activities are described in a **manufacturing statement**, also called the *schedule of manufacturing activities* or the *schedule of cost of goods manufactured*. The manufacturing statement summarizes the types and amounts of costs incurred in a company's manufacturing process. Exhibit 1.16 shows the manufacturing statement for Rocky Mountain Bikes. The statement is divided into four parts: *direct materials*, *direct labor*, *overhead*, and *computation of cost of goods manufactured*. We describe each of these parts in this section.

- ① The manufacturing statement begins by computing direct materials used. We start by adding beginning raw materials inventory of \$8,000 to the current period's purchases of \$86,500. This yields \$94,500 of total raw materials available for use. A physical count of inventory shows \$9,000 of ending raw materials inventory. This implies a total cost of raw materials used during the period of \$85,500 (\$94,500 total raw materials available for use – \$9,000 ending inventory). (*Note:* All raw materials are direct materials for Rocky Mountain Bikes.)

ROCKY MOUNTAIN BIKES Manufacturing Statement For Year Ended December 31, 2009			
①	<b>Direct materials</b>		
	Raw materials inventory, Dec. 31, 2008	\$ 8,000	
	Raw materials purchases	86,500	
	Raw materials available for use	94,500	
	Less raw materials inventory, Dec. 31, 2009	9,000	
	Direct materials used	\$ 85,500	
②	<b>Direct labor</b>		
	Direct labor	60,000	
③	<b>Factory overhead</b>		
	Indirect labor	9,000	
	Factory supervision	6,000	
	Factory utilities	2,600	
	Repairs—Factory equipment	2,500	
	Property taxes—Factory building	1,900	
	Factory supplies used	600	
	Factory insurance expired	1,100	
	Depreciation expense—Small tools	200	
	Depreciation expense—Factory equipment	3,500	
	Depreciation expense—Factory building	1,800	
	Amortization expense—Patents	800	
		Total factory overhead	30,000
	④	Total manufacturing costs	175,500
Add goods in process inventory, Dec. 31, 2008		2,500	
Total cost of goods in process		178,000	
Less goods in process inventory, Dec. 31, 2009		7,500	
<b>Cost of goods manufactured</b>		<b>\$170,500</b>	

**EXHIBIT 1.16**  
Manufacturing Statement

- ② The second part of the manufacturing statement reports direct labor costs. Rocky Mountain Bikes had total direct labor costs of \$60,000 for the period. This amount includes payroll taxes and fringe benefits.
- ③ The third part of the manufacturing statement reports overhead costs. The statement lists each important factory overhead item and its cost. Total factory overhead cost for the period is \$30,000. Some companies report only *total* factory overhead on the manufacturing statement and attach a separate schedule listing individual overhead costs.
- ④ The final section of the manufacturing statement computes and reports the *cost of goods manufactured*. (Total manufacturing costs for the period are \$175,500 [\$85,500 + \$60,000 + \$30,000], the sum of direct materials used and direct labor and overhead costs incurred.) This amount is first added to beginning goods in process inventory. This gives the total goods in process inventory of \$178,000 (\$175,500 + \$2,500). We then compute the current period's cost of goods manufactured of \$170,500 by taking the \$178,000 total goods in process and subtracting the \$7,500 cost of ending goods in process inventory that consists of direct materials, direct labor, and factory overhead. The cost of goods manufactured amount is also called *net cost of goods manufactured* or *cost of goods completed*. Exhibit 1.14 shows that this item and amount are listed in the Cost of Goods Sold section of Rocky Mountain Bikes' income statement and the balance sheet.

**Point:** Direct material and direct labor costs increase with increases in production volume and are called *variable costs*. Overhead can be both variable and fixed. When overhead costs vary with production, they are called *variable overhead*. When overhead costs don't vary with production, they are called *fixed overhead*.

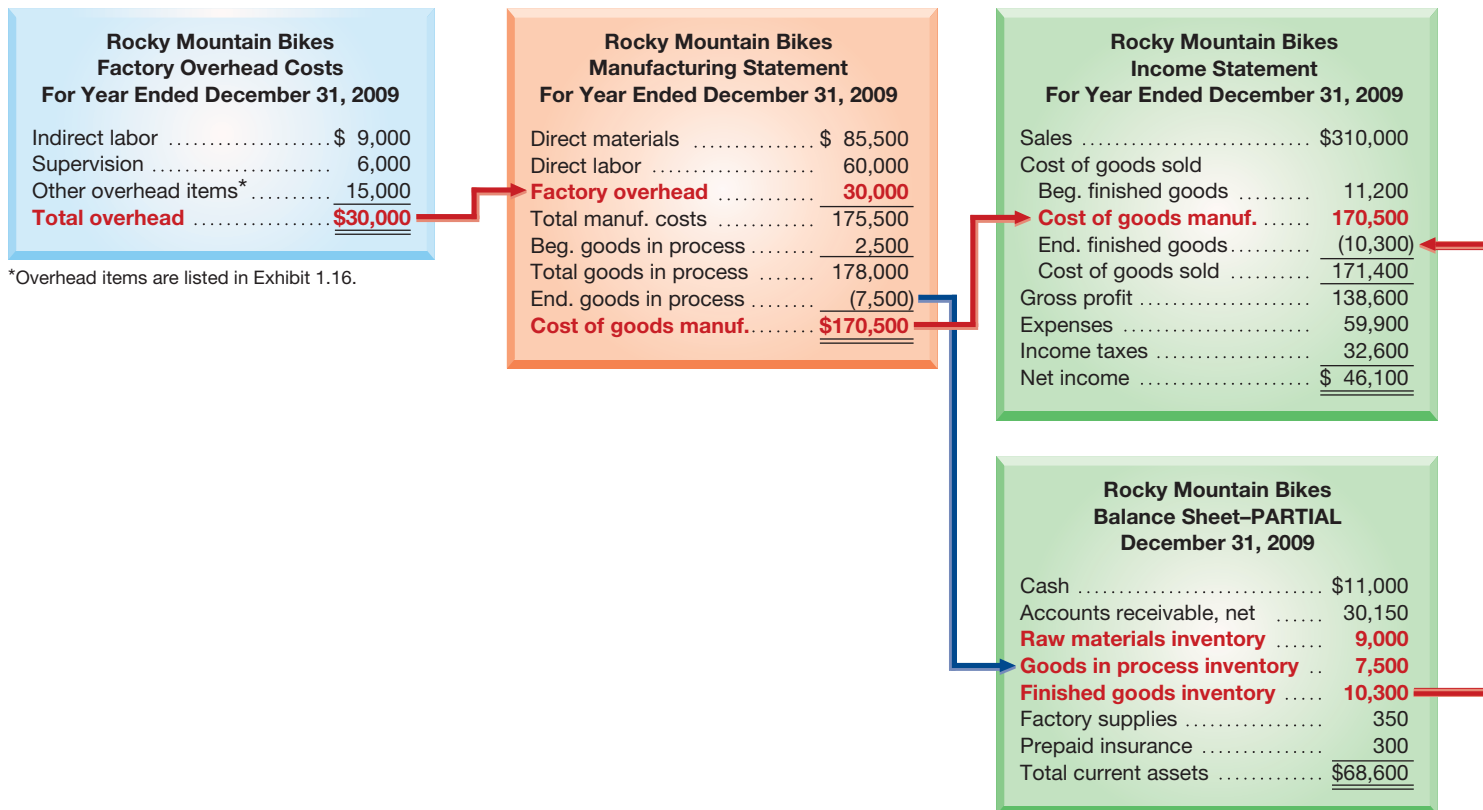

**Point:** Manufacturers sometimes report variable and fixed overhead separately in the manufacturing statement to provide more information to managers about cost behavior.

A managerial accounting system records costs and reports them in various reports that eventually determine financial statements. Exhibit 1.17 shows how overhead costs flow through the system: from an initial listing of specific costs, to a section of the manufacturing statement, to the reporting on the income statement and the balance sheet.

**EXHIBIT 1.17**

Overhead Cost Flows across Accounting Reports

Management uses information in the manufacturing statement to plan and control the company's manufacturing activities. To provide timely information for decision making, the statement is often prepared monthly, weekly, or even daily. In anticipation of release of its much-hyped iPhone, **Apple** grew its inventory of Flash-based memory chips, a critical component, and its finished goods inventory. The manufacturing statement contains information useful to external users but is not a general-purpose financial statement. Companies rarely publish the manufacturing statement because managers view this information as proprietary and potentially harmful to them if released to competitors.

**Quick Check**

Answers—p. 27

9. A manufacturing statement (a) computes cost of goods manufactured for the period, (b) computes cost of goods sold for the period, or (c) reports operating expenses incurred for the period.
10. Are companies required to report a manufacturing statement?
11. How are both beginning and ending goods in process inventories reported on a manufacturing statement?

*Decision Analysis (a section at the end of each chapter) introduces and explains simple tools helpful in managerial decisions.*

**Decision Analysis**

**Cycle Time and Cycle Efficiency**

**A1** Compute cycle time and cycle efficiency, and explain their importance to production management.

As lean manufacturing practices help companies move toward just-in-time manufacturing, it is important for these companies to reduce the time to manufacture their products and to improve manufacturing efficiency. One metric that measures that time element is **cycle time (CT)**. A definition of cycle time is in Exhibit 1.18.

$$\text{Cycle time} = \text{Process time} + \text{Inspection time} + \text{Move time} + \text{Wait time}$$

**EXHIBIT 1.18**

Cycle Time

*Process time* is the time spent producing the product. *Inspection time* is the time spent inspecting (1) raw materials when received, (2) goods in process while in production, and (3) finished goods prior to shipment. *Move time* is the time spent moving (1) raw materials from storage to production and (2) goods in process from factory location to another factory location. *Wait time* is the time that an order or job sits with no production applied to it; this can be due to order delays, bottlenecks in production, and poor scheduling.

Process time is considered **value-added time** because it is the only activity in cycle time that adds value to the product from the customer's perspective. The other three time activities are considered **non-value-added time** because they add no value to the customer.

Companies strive to reduce non-value-added time to improve **cycle efficiency (CE)**. Cycle efficiency is the ratio of value-added time to total cycle time—see Exhibit 1.19.

$$\text{Cycle efficiency} = \frac{\text{Value-added time}}{\text{Cycle time}}$$

**EXHIBIT 1.19**

Cycle Efficiency

To illustrate, assume that Rocky Mountain Bikes receives and produces an order for 500 Tracker<sup>®</sup> mountain bikes. Assume that the following times were measured during production of this order.

Process time... 1.8 days

Inspection time... 0.5 days

Move time... 0.7 days

Wait time... 3.0 days

In this case, cycle time is 6.0 days, computed as 1.8 days + 0.5 days + 0.7 days + 3.0 days. Also, cycle efficiency is 0.3, or 30%, computed as 1.8 days divided by 6.0 days. This means that Rocky Mountain Bikes spends 30% of its time working on the product (value-added time). The other 70% is spent on non-value-added activities.

If a company has a CE of 1, it means that its time is spent entirely on value-added activities. If the CE is low, the company should evaluate its production process to see if it can identify ways to reduce non-value-added activities. The 30% CE for Rocky Mountain Bikes is low and its management should look for ways to reduce non-value-added activities.

The **Demonstration Problem** is a review of key chapter content. The **Planning the Solution** offers strategies in solving the problem.

## Demonstration Problem 1: Cost Behavior and Classification

Understanding the classification and assignment of costs is important. Consider a company that manufactures computer chips. It incurs the following costs in manufacturing chips and in operating the company.

1. Plastic board used to mount the chip, \$3.50 each.
2. Assembly worker pay of \$15 per hour to attach chips to plastic board.
3. Salary for factory maintenance workers who maintain factory equipment.
4. Factory supervisor pay of \$55,000 per year to supervise employees.
5. Real estate taxes paid on the factory, \$14,500.
6. Real estate taxes paid on the company office, \$6,000.
7. Depreciation costs on machinery used by workers, \$30,000.
8. Salary paid to the chief financial officer, \$95,000.
9. Advertising costs of \$7,800 paid to promote products.
10. Salespersons' commissions of \$0.50 for each assembled chip sold.
11. Management has the option to rent the manufacturing plant to six local hospitals to store medical records instead of producing and assembling chips.

Classify each cost in the following table according to the categories listed in the table header. A cost can be classified under more than one category. For example, the plastic board used to mount chips is classified as a direct material product cost and as a direct unit cost.

Cost	Period Costs	Product Costs			Unit Cost Classification		Sunk Cost	Opportunity Cost
	Selling and Administrative	Direct Material (Prime Cost)	Direct Labor (Prime and Conversion)	Factory Overhead (Conversion Cost)	Direct	Indirect		
1. Plastic board used to mount the chip, \$3.50 each		✓			✓			

### Solution to Demonstration Problem 1

Cost of goods sold .....	<u>123,000</u>	Cost of goods sold .....	<u>104,000</u>
Gross profit .....	<u>\$ 77,000</u>	Gross profit .....	<u>\$ 86,000</u>

3. The manufacturer's cost of goods manufactured is the sum of (a) \_\_\_\_\_, (b) \_\_\_\_\_, and (c) \_\_\_\_\_ costs incurred in producing the product.

## Solution to Demonstration Problem 2

1. Inventories for a manufacturer and for a merchandiser.

<b>Manufacturing Company</b>		<b>Merchandising Company</b>	
<b>ADIDAS GROUP</b> Partial Balance Sheet December 31, 2009		<b>PAYLESS SHOE OUTLET</b> Partial Balance Sheet December 31, 2009	
Current assets		Current assets	
Cash .....	\$10,000	Cash .....	\$ 5,000
<b>Raw materials inventory</b> .....	8,000	<b>Merchandise inventory</b> .....	12,000
<b>Goods in process inventory</b> .....	5,000	Supplies .....	500
<b>Finished goods inventory</b> .....	7,000	Prepaid insurance .....	500
Supplies .....	500	Total current assets .....	<u>\$18,000</u>
Prepaid insurance .....	500		
Total current assets .....	<u>\$31,000</u>		

*Explanation:* A manufacturing company must control and measure three types of inventories: raw materials, goods in process, and finished goods. In the sequence of making a product, the raw materials

move into production—called *goods in process inventory*—and then to finished goods. All raw materials and goods in process inventory at the end of each accounting period are considered current assets. All unsold finished inventory is considered a current asset at the end of each accounting period. The merchandising company must control and measure only one type of inventory, purchased goods.

2. Cost of goods sold for a manufacturer and for a merchandiser.

<b>Manufacturing Company</b>		<b>Merchandising Company</b>	
<b>ADIDAS GROUP</b>		<b>PAYLESS SHOE OUTLET</b>	
Partial Income Statement		Partial Income Statement	
For Year Ended December 31, 2009		For Year Ended December 31, 2009	
Sales	\$ 200,000	Sales	\$ 190,000
Cost of goods sold		Cost of goods sold	
Finished goods inventory, Dec. 31, 2008	10,000	Merchandise inventory, Dec. 31, 2008	8,000
<b>Cost of goods manufactured</b>	<u>120,000</u>	<b>Cost of purchases</b>	<u>108,000</u>
Goods available for sale	130,000	Goods available for sale	116,000
Finished goods inventory, Dec. 31, 2009	(7,000)	Merchandise inventory, Dec. 31, 2009	(12,000)
Cost of goods sold	<u>123,000</u>	Cost of goods sold	<u>104,000</u>
Gross profit	<u>\$ 77,000</u>	Gross profit	<u>\$ 86,000</u>

*Explanation:* Manufacturing and merchandising companies use different reporting terms. In particular, the terms *finished goods* and *cost of goods manufactured* are used to reflect the production of goods, yet the concepts and techniques of reporting cost of goods sold for a manufacturing company and merchandising company are similar.

3. A manufacturer's cost of goods manufactured is the sum of (a) *direct material*, (b) *direct labor*, and (c) *factory overhead* costs incurred in producing the product.

### Demonstration Problem 3: Manufacturing Statement

The following account balances and other information are from SUNN Corporation's accounting records for year-end December 31, 2009. Use this information to prepare (1) a table listing factory overhead costs, (2) a manufacturing statement (show only the total factory overhead cost), and (3) an income statement.

Advertising expense	\$ 85,000	Goods in process inventory, Dec. 31, 2008	\$ 8,000
Amortization expense—Factory patents	16,000	Goods in process inventory, Dec. 31, 2009	9,000
Bad debts expense	28,000	Income taxes	53,400
Depreciation expense—Office equipment	37,000	Indirect labor	26,000
Depreciation expense—Factory building	133,000	Interest expense	25,000
Depreciation expense—Factory equipment	78,000	Miscellaneous expense	55,000
Direct labor	250,000	Property taxes on factory equipment	14,000
Factory insurance expired	62,000	Raw materials inventory, Dec. 31, 2008	60,000
Factory supervision	74,000	Raw materials inventory, Dec. 31, 2009	78,000
Factory supplies used	21,000	Raw materials purchases	313,000
Factory utilities	115,000	Repairs expense—Factory equipment	31,000
Finished goods inventory, Dec. 31, 2008	15,000	Salaries expense	150,000
Finished goods inventory, Dec. 31, 2009	12,500	Sales	1,630,000

### Planning the Solution

- Analyze the account balances and select those that are part of factory overhead costs.
- Arrange these costs in a table that lists factory overhead costs for the year.
- Analyze the remaining costs and select those related to production activity for the year; selected costs should include the materials and goods in process inventories and direct labor.

- Prepare a manufacturing statement for the year showing the calculation of the cost of materials used in production, the cost of direct labor, and the total factory overhead cost. When presenting overhead cost on this statement, report only total overhead cost from the table of overhead costs for the year. Show the costs of beginning and ending goods in process inventory to determine cost of goods manufactured.
- Organize the remaining revenue and expense items into the income statement for the year. Combine cost of goods manufactured from the manufacturing statement with the finished goods inventory amounts to compute cost of goods sold for the year.

### Solution to Demonstration Problem 3

<b>SUNN CORPORATION</b> Factory Overhead Costs For Year Ended December 31, 2009	
Amortization expense—Factory patents . . . . .	\$ 16,000
Depreciation expense—Factory building . . . . .	133,000
Depreciation expense—Factory equipment . . . . .	78,000
Factory insurance expired . . . . .	62,000
Factory supervision . . . . .	74,000
Factory supplies used . . . . .	21,000
Factory utilities . . . . .	115,000
Indirect labor . . . . .	26,000
Property taxes on factory equipment . . . . .	14,000
Repairs expense—Factory equipment . . . . .	31,000
Total factory overhead . . . . .	<u>\$570,000</u>

<b>SUNN CORPORATION</b> Manufacturing Statement For Year Ended December 31, 2009	
Direct materials	
Raw materials inventory, Dec. 31, 2008 . . . . .	\$ 60,000
Raw materials purchase . . . . .	313,000
Raw materials available for use . . . . .	373,000
Less raw materials inventory, Dec. 31, 2009 . . . . .	78,000
Direct materials used . . . . .	295,000
Direct labor . . . . .	250,000
Factory overhead . . . . .	570,000
Total manufacturing costs . . . . .	1,115,000
Goods in process inventory, Dec. 31, 2008 . . . . .	8,000
Total cost of goods in process . . . . .	1,123,000
Less goods in process inventory, Dec. 31, 2009 . . . . .	9,000
Cost of goods manufactured . . . . .	<u>\$1,114,000</u>

<b>SUNN CORPORATION</b> Income Statement For Year Ended December 31, 2009	
Sales . . . . .	\$1,630,000
Cost of goods sold	
Finished goods inventory, Dec. 31, 2008 . . . . .	\$ 15,000
Cost of goods manufactured . . . . .	1,114,000
Goods available for sale . . . . .	1,129,000
Less finished goods inventory, Dec. 31, 2009 . . . . .	12,500
Cost of goods sold . . . . .	1,116,500
Gross profit . . . . .	513,500
Operating expenses	
Advertising expense . . . . .	85,000
Bad debts expense . . . . .	28,000
Depreciation expense—Office equipment . . . . .	37,000
Interest expense . . . . .	25,000
Miscellaneous expense . . . . .	55,000
Salaries expense . . . . .	150,000
Total operating expenses . . . . .	380,000
Income before income taxes . . . . .	133,500
Income taxes . . . . .	53,400
Net income . . . . .	<u>\$ 80,100</u>

← A Summary organized by learning objectives concludes each chapter.

## Summary

### C1 Explain the purpose and nature of managerial accounting.

The purpose of managerial accounting is to provide useful information to management and other internal decision makers. It does this by collecting, managing, and reporting both monetary and nonmonetary information in a manner useful to internal users.

Major characteristics of managerial accounting include (1) focus on internal decision makers, (2) emphasis on planning and control, (3) flexibility, (4) timeliness, (5) reliance on forecasts and estimates, (6) focus on segments and projects, and (7) reporting both monetary and nonmonetary information.

**C2 Describe the lean business model.** The main purpose of the lean business model is the elimination of waste. Concepts such as total quality management and just-in-time production often aid in effective application of the model.

**C3 Describe fraud and the role of ethics in managerial accounting.** Fraud involves the use of one's job for personal gain through deliberate misuse of the employer's assets. All fraud is secret, violates the employee's job duties, provides financial benefits to the employee, and costs the employer money. A code of ethical beliefs can be used to resolve ethical conflicts.

**C4 Describe accounting concepts useful in classifying costs.** We can classify costs on the basis of their (1) behavior—fixed vs. variable, (2) traceability—direct vs. indirect, (3) controllability—controllable vs. uncontrollable, (4) relevance—sunk vs. out of pocket, and (5) function—product vs. period. A cost can be classified in more than one way, depending on the purpose for which the cost is being determined. These classifications help us understand cost patterns, analyze performance, and plan operations.

**C5 Define product and period costs and explain how they impact financial statements.** Costs that are capitalized because they are expected to have future value are called *product costs*; costs that are expensed are called *period costs*. This classification is important because it affects the amount of costs expensed in the income statement and the amount of costs assigned to inventory on the balance sheet. Product costs are commonly made up of direct materials, direct labor, and overhead. Period costs include selling and administrative expenses.

**C6 Explain how balance sheets and income statements for manufacturing and merchandising companies differ.** The main difference is that manufacturers usually carry three inventories

on their balance sheets—raw materials, goods in process, and finished goods—instead of one inventory that merchandisers carry. The main difference between income statements of manufacturers and merchandisers is the items making up cost of goods sold. A merchandiser adds beginning merchandise inventory to cost of goods purchased and then subtracts ending merchandise inventory to get cost of goods sold. A manufacturer adds beginning finished goods inventory to cost of goods manufactured and then subtracts ending finished goods inventory to get cost of goods sold.

**C7 Explain manufacturing activities and the flow of manufacturing costs.** Manufacturing activities consist of materials, production, and sales activities. The materials activity consists of the purchase and issuance of materials to production. The production activity consists of converting materials into finished goods. At this stage in the process, the materials, labor, and overhead costs have been incurred and the manufacturing statement is prepared. The sales activity consists of selling some or all of finished goods available for sale. At this stage, the cost of goods sold is determined.

**A1 Compute cycle time and cycle efficiency, and explain their importance to production management.** It is important for companies to reduce the time to produce their products and to improve manufacturing efficiency. One measure of that time is cycle time (CT), defined as Process time + Inspection time + Move time + Wait time. Process time is value-added time; the others are non-value-added time. Cycle efficiency (CE) is the ratio of value-added time to total cycle time. If CE is low, management should evaluate its production process to see if it can reduce non-value-added activities.

**P1 Compute cost of goods sold for a manufacturer.** A manufacturer adds beginning finished goods inventory to cost of goods manufactured and then subtracts ending finished goods inventory to get cost of goods sold.

**P2 Prepare a manufacturing statement and explain its purpose and links to financial statements.** The manufacturing statement reports computation of cost of goods manufactured for the period. It begins by showing the period's costs for direct materials, direct labor, and overhead and then adjusts these numbers for the beginning and ending inventories of the goods in process to yield cost of goods manufactured.

## Guidance Answers to **Decision Maker** and **Decision Ethics**

**Production Manager** It appears that all three friends want to pay the bill with someone else's money. David is using money belonging to the tax authorities, Denise is taking money from her company, and Derek is defrauding the client. To prevent such practices, companies have internal audit mechanisms. Many companies also adopt ethical codes of conduct to help guide employees. We must recognize that some entertainment expenses are justifiable and even encouraged. For example, the tax law allows certain deductions for entertainment that have a business purpose. Corporate policies also sometimes allow and encourage reimbursable spending for social activities, and contracts can include entertainment as allowable costs.

Nevertheless, without further details, payment for this bill should be made from personal accounts.

**Entrepreneur** Tracing all costs directly to cost objects is always desirable, but you need to be able to do so in an economically feasible manner. In this case, you are able to trace 90% of the assembly department's direct costs. It may not be economical to spend more money on a new software to trace the final 10% of costs. You need to make a cost-benefit trade-off. If the software offers benefits beyond tracing the remaining 10% of the assembly department's costs, your decision should consider this.

**Purchase Manager** Opportunity costs relate to the potential quality and delivery benefits given up by not choosing supplier (A). Selecting supplier (B) might involve future costs of poor-quality seats (inspection, repairs, and returns). Also, potential delivery delays could

interrupt work and increase manufacturing costs. Your company could also incur sales losses if the product quality of supplier (B) is low. As purchase manager, you are responsible for these costs and must consider them in making your decision.

## Guidance Answers to Quick Checks

- d*
- Financial accounting information is intended for users external to an organization such as investors, creditors, and government authorities. Managerial accounting focuses on providing information to managers, officers, and other decision makers within the organization.
- No, GAAP do not control the practice of managerial accounting. Unlike external users, the internal users need managerial accounting information for planning and controlling business activities rather than for external comparison. Different types of information are required, depending on the activity. Therefore it is difficult to standardize managerial accounting.
- Under TQM, all managers and employees should strive toward higher standards in their work and in the products and services they offer to customers.
- Variable costs increase when volume of activity increases.
- By being able to trace costs to cost objects (say, to products and departments), managers better understand the total costs

associated with a cost object. This is useful when managers consider making changes to the cost object (such as when dropping the product or expanding the department).

- Raw materials inventory, goods in process inventory, and finished goods inventory.
- The cost of goods sold for merchandising companies includes all costs of acquiring the merchandise; the cost of goods sold for manufacturing companies includes the three costs of manufacturing: direct materials, direct labor, and overhead.
- a*
- No; companies rarely report a manufacturing statement.
- Beginning goods in process inventory is added to total manufacturing costs to yield total goods in process. Ending goods in process inventory is subtracted from total goods in process to yield cost of goods manufactured for the period.

*A list of key terms with page references concludes each chapter (a complete glossary is at the end of the book and on the book's Website).*

## Key Terms

[mhhe.com/wildMA2e](http://mhhe.com/wildMA2e)

Key Terms are available at the book's Website for learning and testing in an online Flashcard Format.

**Continuous improvement** (p. 8)  
**Control** (p. 5)  
**Controllable or not controllable cost** (p. 11)  
**Conversion costs** (p. 16)  
**Cost object** (p. 10)  
**Customer orientation** (p. 7)  
**Cycle efficiency (CE)** (p. 21)  
**Cycle time (CT)** (p. 21)  
**Direct costs** (p. 10)  
**Direct labor** (p. 16)  
**Direct labor costs** (p. 16)  
**Direct materials** (p. 16)  
**Direct material costs** (p. 16)  
**Ethics** (p. 9)

**Factory overhead** (p. 16)  
**Factory overhead costs** (p. 16)  
**Finished goods inventory** (p. 14)  
**Fixed cost** (p. 10)  
**Goods in process inventory** (p. 14)  
**Indirect costs** (p. 10)  
**Indirect labor** (p. 16)  
**Indirect labor costs** (p. 16)  
**Indirect materials** (p. 13)  
**Institute of Management Accountants (IMA)** (p. 9)  
**Internal control system** (p. 9)  
**Just-in-time (JIT) manufacturing** (p. 8)  
**Lean business model** (p. 8)  
**Managerial accounting** (p. 4)

**Manufacturing statement** (p. 18)  
**Non-value-added time** (p. 21)  
**Opportunity cost** (p. 11)  
**Out-of-pocket cost** (p. 11)  
**Period costs** (p. 11)  
**Planning** (p. 4)  
**Prime costs** (p. 16)  
**Product costs** (p. 11)  
**Raw materials inventory** (p. 13)  
**Sunk cost** (p. 11)  
**Total quality management (TQM)** (p. 8)  
**Value-added time** (p. 21)  
**Value chain** (p. 18)  
**Variable cost** (p. 10)

## Multiple Choice Quiz

Answers on p. 45

[mhhe.com/wildMA2e](http://mhhe.com/wildMA2e)

Additional Quiz Questions are available at the book's Website.

- Continuous improvement
  - Is used to reduce inventory levels.
  - Is applicable only in service businesses.
  - Rejects the notion of "good enough."
  - Is used to reduce ordering costs.
  - Is applicable only in manufacturing businesses.

Quiz I

2. A direct cost is one that is
  - a. Variable with respect to the cost object.
  - b. Traceable to the cost object.
  - c. Fixed with respect to the cost object.
  - d. Allocated to the cost object.
  - e. A period cost.
3. Costs that are incurred as part of the manufacturing process, but are not clearly traceable to the specific unit of product or batches of product, are called
  - a. Period costs.
  - b. Factory overhead.
  - c. Sunk costs.
  - d. Opportunity costs.
  - e. Fixed costs.
4. The three major cost components of manufacturing a product are
  - a. Direct materials, direct labor, and factory overhead.
  - b. Period costs, product costs, and sunk costs.
  - c. Indirect labor, indirect materials, and fixed expenses.
  - d. Variable costs, fixed costs, and period costs.
  - e. Opportunity costs, sunk costs, and direct costs.
5. A company reports the following for the current year.
 

Finished goods inventory, beginning year . . . . .	\$6,000
Finished goods inventory, ending year . . . . .	3,200
Cost of goods sold . . . . .	7,500

Its cost of goods manufactured for the current year is

  - a. \$1,500.
  - b. \$1,700.
  - c. \$7,500.
  - d. \$2,800.
  - e. \$4,700.

## Discussion Questions

1. Describe the managerial accountant's role in business planning, control, and decision making.
2. Distinguish between managerial and financial accounting on
  - a. Users and decision makers.
  - b. Purpose of information.
  - c. Flexibility of practice.
  - d. Time dimension.
  - e. Focus of information.
  - f. Nature of information.
3.  Identify the usual changes that a company must make when it adopts a customer orientation.
4. Distinguish between direct material and indirect material.
5. Distinguish between direct labor and indirect labor.
6. Distinguish between (a) factory overhead and (b) selling and administrative overhead.
7. What product cost is listed as both a prime cost and a conversion cost?
8.  Assume that you tour **Apple's** factory where it makes its products. List three direct costs and three indirect costs that you are likely to see. 
9.  Should we evaluate a manager's performance on the basis of controllable or noncontrollable costs? Why?
10.  Explain why knowledge of cost behavior is useful in product performance evaluation.
11. Explain why product costs are capitalized but period costs are expensed in the current accounting period.
12.  Explain how business activities and inventories for a manufacturing company, a merchandising company, and a service company differ.
13.  Why does managerial accounting often involve working with numerous predictions and estimates?
14. How do an income statement and a balance sheet for a manufacturing company and a merchandising company differ?
15. Besides inventories, what other assets often appear on manufacturers' balance sheets but not on merchandisers' balance sheets?
16. Why does a manufacturing company require three different inventory categories?
17. Manufacturing activities of a company are described in the \_\_\_\_\_. This statement summarizes the types and amounts of costs incurred in its manufacturing \_\_\_\_\_.
18. What are the three categories of manufacturing costs?
19. List several examples of factory overhead.
20.  List the four components of a manufacturing statement and provide specific examples of each for **Apple**. 
21.  Prepare a proper title for the annual "manufacturing statement" of **Apple**. Does the date match the balance sheet or income statement? Why? 
22.  Describe the relations among the income statement, the manufacturing statement, and a detailed listing of factory overhead costs.
23.  Define and describe *cycle time* and identify the components of cycle time.
24.  Explain the difference between value-added time and non-value-added time.
25. Define and describe *cycle efficiency*.
26.  Can management of a company such as **Best Buy** use cycle time and cycle efficiency as useful measures of performance? Explain. 
27. Access **Anheuser-Busch's** 2006 annual report (10-K) for the fiscal year ended December 31, 2006, at the SEC's EDGAR database ([SEC.gov](http://SEC.gov)) or its Website ([Anheuser-Busch.com](http://Anheuser-Busch.com)). From its financial statement notes, identify the titles and amounts of its inventory components.

**Denotes Discussion Questions that involve decision making.**

**Connect Accounting** repeats assignments on the Connect Accounting Website, which allows instructors to monitor, promote, and assess student learning. It can be used in practice, homework, or exam mode.

Most materials in this section are available in McGraw-Hill's Connect

**Quick Study** exercises give readers a brief test of key elements.

## QUICK STUDY

### QS 1-1

Managerial accounting defined

C1

Managerial accounting (choose one)

1. Provides information that is widely available to all interested parties.
2. Is directed at reporting aggregate data on the company as a whole.
3. Must follow generally accepted accounting principles.
4. Provides information to aid management in planning and controlling business activities.

Identify whether each description most likely applies to managerial or financial accounting.

1. \_\_\_\_\_ It is directed at external users in making investment, credit, and other decisions.
2. \_\_\_\_\_ Its information is often available only after an audit is complete.
3. \_\_\_\_\_ Its primary focus is on the organization as a whole.
4. \_\_\_\_\_ Its principles and practices are very flexible.
5. \_\_\_\_\_ Its primary users are company managers.

### QS 1-2

Managerial accounting versus financial accounting

C1

Match each lean business concept with its best description by entering its letter in the blank.

- |                                     |   |
|-------------------------------------|---|
| 1. _____ Just-in-time manufacturing | <b>A.</b> Every manager and employee constantly looks for ways to improve company operations. |
| 2. _____ Continuous improvements    | <b>B.</b> Focuses on quality throughout the production process.                               |
| 3. _____ Customer orientation       | <b>C.</b> Inventory is acquired or produced only as needed.                                   |
| 4. _____ Total quality management   | <b>D.</b> Flexible product designs can be modified to accommodate customer choices.           |

### QS 1-3

Lean business concepts

C2

Which of these statements is true regarding fixed and variable costs?

1. Fixed costs increase and variable costs decrease in total as activity volume decreases.
2. Both fixed and variable costs stay the same in total as activity volume increases.
3. Both fixed and variable costs increase as activity volume increases.
4. Fixed costs stay the same and variable costs increase in total as activity volume increases.

### QS 1-4

Fixed and variable costs

C4

Crosby Company produces sporting equipment, including footballs. Identify each of the following costs as direct or indirect if the cost object is a football produced by Crosby.

1. Depreciation on equipment used to produce footballs.
2. Salary of manager who supervises the entire plant.
3. Labor used on the football production line.
4. Electricity used in the production plant.
5. Materials used to produce footballs.

### QS 1-5

Direct and indirect costs

C4

Which of these statements is true regarding product and period costs?

1. Factory maintenance is a product cost and sales commission is a period cost.
2. Sales commission is a product cost and factory rent is a period cost.
3. Factory wages are a product cost and direct material is a period cost.
4. Sales commission is a product cost and depreciation on factory equipment is a product cost.

### QS 1-6

Product and period costs

C5

Three inventory categories are reported on a manufacturing company's balance sheet: (a) raw materials, (b) goods in process, and (c) finished goods. Identify the usual order in which these inventory items are reported on the balance sheet.

1. (b)(c)(a)
2. (c)(b)(a)
3. (a)(b)(c)
4. (b)(a)(c)

### QS 1-7

Inventory reporting for manufacturers

C6

**QS 1-8**

Cost of goods sold P1

A company has year-end cost of goods manufactured of \$8,000, beginning finished goods inventory of \$1,000, and ending finished goods inventory of \$1,500. Its cost of goods sold is

1. \$8,500      2. \$8,000      3. \$7,500      4. \$7,800

**QS 1-9**

Manufacturing flows identified

Identify the usual sequence of manufacturing activities by filling in the blank (with 1, 2, or 3) corresponding to its order: \_\_\_\_\_ Production activities; \_\_\_\_\_ sales activities; \_\_\_\_\_ materials activities.

C7

**QS 1-10**

Cost of goods manufactured

Prepare the 2009 manufacturing statement for Biron Company using the following information.

P2

Direct materials	\$381,000
Direct labor	126,300
Factory overhead costs	48,000
Goods in process, Dec. 31, 2008	315,200
Goods in process, Dec. 31, 2009	285,500

**QS 1-11**

Manufacturing cycle time and efficiency

Compute and interpret (a) manufacturing cycle time and (b) manufacturing cycle efficiency using the following information from a manufacturing company.

Process time	7.5 hours
Inspection time	1.0 hours
Move time	3.2 hours
Wait time	18.3 hours

**QS 1-12**

Cost of goods sold

Compute cost of goods sold for year 2009 using the following information.

P1

Finished goods inventory, Dec. 31, 2008	\$ 690,000
Goods in process inventory, Dec. 31, 2008	167,000
Goods in process inventory, Dec. 31, 2009	144,600
Cost of goods manufactured, year 2009	1,837,400
Finished goods inventory, Dec. 31, 2009	567,200

Most materials in this section are available in McGraw-Hill's Connect

**EXERCISES**

Both managerial accounting and financial accounting provide useful information to decision makers. Indicate in the following chart the most likely source of information for each business decision (a decision can require major input from both sources, in which case both can be marked).

**Exercise 1-1**

Sources of accounting information

This icon highlights assignments that enhance decision-making skills.

Business Decision	Primary Information Source	
	Managerial	Financial
1. Determine amount of dividends to pay stockholders	—	—
2. Evaluate a purchasing department's performance	—	—
3. Report financial performance to board of directors	—	—
4. Estimate product cost for a new line of shoes	—	—
5. Plan the budget for next quarter	—	—
6. Measure profitability of all individual stores	—	—
7. Prepare financial reports according to GAAP	—	—
8. Determine location and size for a new plant	—	—

Complete the following statements by filling in the blanks.

1. \_\_\_\_\_ is the process of monitoring planning decisions and evaluating an organization's activities and employees.
2. \_\_\_\_\_ is the process of setting goals and making plans to achieve them.
3. \_\_\_\_\_ usually covers a period of 5 to 10 years.
4. \_\_\_\_\_ usually covers a period of one year.

**Exercise 1-2**

Planning and control descriptions  
C1

In the following chart, compare financial accounting and managerial accounting by describing how each differs for the items listed. Be specific in your responses.

	Financial Accounting	Managerial Accounting
1. Users and decision makers . . . . .	_____	_____
2. Timeliness of information . . . . .	_____	_____
3. Purpose of information . . . . .	_____	_____
4. Nature of information . . . . .	_____	_____
5. Flexibility of practice . . . . .	_____	_____
6. Focus of information . . . . .	_____	_____
7. Time dimension . . . . .	_____	_____

**Exercise 1-3**

Characteristics of financial accounting and managerial accounting  
C1

Customer orientation means that a company's managers and employees respond to customers' changing wants and needs. A manufacturer of plastic fasteners has created a customer satisfaction survey that it asks each of its customers to complete. The survey asks about the following factors: (A) lead time; (B) delivery; (C) price; (D) product performance. Each factor is to be rated as unsatisfactory, marginal, average, satisfactory, or very satisfied.

- a. Match the competitive forces 1 through 4 to the factors on the survey. A factor can be matched to more than one competitive force.

Survey Factor	Competitive Force
<b>A.</b> Lead time	_____ <b>1.</b> Cost
<b>B.</b> Delivery	_____ <b>2.</b> Time
<b>C.</b> Price	_____ <b>3.</b> Quality
<b>D.</b> Product performance	_____ <b>4.</b> Flexibility of service

- b. How can managers of this company use the information from this customer satisfaction survey to better meet competitive forces and satisfy their customers?

**Exercise 1-4**

Customer orientation in practice  
C2 

Following are three separate events affecting the managerial accounting systems for different companies. Match the management concept(s) that the company is likely to adopt for the event identified. There is some overlap in the meaning of customer orientation and total quality management and, therefore, some responses can include more than one concept.

**Exercise 1-5**

Management concepts  
C2 

Event	Management Concept
_____ 1. The company starts reporting measures on customer complaints and product returns from customers.	a. Total quality management (TQM) b. Continuous improvement (CI)
_____ 2. The company starts reporting measures such as the percent of defective products and the number of units scrapped.	c. Customer orientation (CO)
_____ 3. The company starts measuring inventory turnover and discontinues elaborate inventory records. Its new focus is to pull inventory through the system.	d. Just-in-time (JIT) system

**Exercise 1-6**

Cost analysis and identification

**Georgia Pacific**, a manufacturer, incurs the following costs. (1) Classify each cost as either a product or a period cost. If a product cost, identify it as a prime and/or conversion cost. (2) Classify each product cost as either a direct cost or an indirect cost using the product as the cost object.

Cost	Product Cost		Period Cost	Direct Cost	Indirect Cost
	Prime	Conversion			
1. Amortization of patents on factory machine . . .	—	—	—	—	—
2. Payroll taxes for production supervisor . . . . .	—	—	—	—	—
3. Accident insurance on factory workers . . . . .	—	—	—	—	—
4. Depreciation—Factory building . . . . .	—	—	—	—	—
5. State and federal income taxes . . . . .	—	—	—	—	—
6. Wages to assembly workers . . . . .	—	—	—	—	—
7. Direct materials used . . . . .	—	—	—	—	—
8. Office supplies used . . . . .	—	—	—	—	—
9. Bad debts expense . . . . .	—	—	—	—	—
10. Small tools used . . . . .	—	—	—	—	—
11. Factory utilities . . . . .	—	—	—	—	—
12. Advertising . . . . .	—	—	—	—	—

**Exercise 1-7**

Cost classifications C4

(1) Identify each of the five cost classifications discussed in the chapter. (2) List two purposes of identifying these separate cost classifications.

**Exercise 1-8**

Cost analysis and classification

Listed here are product costs for the production of soccer balls. (1) Classify each cost (a) as either fixed or variable and (b) as either direct or indirect. (2) What pattern do you see regarding the relation between costs classified by behavior and costs classified by traceability?

Product Cost	Cost by Behavior		Cost by Traceability	
	Variable	Fixed	Direct	Indirect
1. Annual flat fee paid for office security . . . . .	—	—	—	—
2. Leather covers for soccer balls . . . . .	—	—	—	—
3. Lace to hold leather together . . . . .	—	—	—	—
4. Wages of assembly workers . . . . .	—	—	—	—
5. Coolants for machinery . . . . .	—	—	—	—
6. Machinery depreciation . . . . .	—	—	—	—
7. Taxes on factory . . . . .	—	—	—	—

**Exercise 1-9**

Balance sheet identification and preparation

Current assets for two different companies at calendar year-end 2009 are listed here. One is a manufacturer, Nordic Skis Mfg., and the other, Fresh Foods, is a grocery distribution company. (1) Identify which set of numbers relates to the manufacturer and which to the merchandiser. (2) Prepare the current asset section for each company from this information. Discuss why the current asset section for these two companies is different.

Account	Company 1	Company 2
Cash . . . . .	\$13,000	\$11,000
Raw materials inventory . . . . .	—	41,250
Merchandise inventory . . . . .	44,250	—
Goods in process inventory . . . . .	—	30,000
Finished goods inventory . . . . .	—	50,000
Accounts receivable, net . . . . .	62,000	81,000
Prepaid expenses . . . . .	3,000	600

Compute cost of goods sold for each of these two companies for the year ended December 31, 2009.

**Exercise 1-10**

Cost of goods sold computation

C6 P1

	Computer Merchandising	Log Homes Manufacturing
1		
2		
3	Beginning inventory	
4	Merchandise	\$301,000
5	Finished goods	
6	Cost of purchases	580,000
7	Cost of goods manufactured	
8	Ending inventory	
9	Merchandise	201,000
10	Finished goods	195,000

**Check** Computer Merchandising COGS, \$680,000

Using the following data, compute (1) the cost of goods manufactured and (2) the cost of goods sold for both Jahmed Company and Kabiro Company.

**Exercise 1-11**

Cost of goods manufactured and cost of goods sold computation

P1 P2

	Jahmed Company	Kabiro Company
Beginning finished goods inventory . . . . .	\$15,000	\$15,000
Beginning goods in process inventory . . . . .	21,000	21,500
Beginning raw materials inventory . . . . .	9,500	13,000
Rental cost on factory equipment . . . . .	33,000	27,000
Direct labor . . . . .	22,000	44,000
Ending finished goods inventory . . . . .	19,500	12,000
Ending goods in process inventory . . . . .	22,000	21,000
Ending raw materials inventory . . . . .	10,500	9,400
Factory utilities . . . . .	13,000	17,000
Factory supplies used . . . . .	10,600	10,000
General and administrative expenses . . . . .	22,000	54,000
Indirect labor . . . . .	3,250	9,660
Repairs—Factory equipment . . . . .	6,780	3,500
Raw materials purchases . . . . .	24,000	47,000
Sales salaries . . . . .	49,000	41,000

**Check** Jahmed COGS, \$106,130

For each of the following account balances for a manufacturing company, place a ✓ in the appropriate column indicating that it appears on the balance sheet, the income statement, the manufacturing statement, and/or a detailed listing of factory overhead costs. Assume that the income statement shows the calculation of cost of goods sold and the manufacturing statement shows only the total amount of factory overhead. (An account balance can appear on more than one report.)

**Exercise 1-12**

Components of accounting reports

C7 P2

Account	Balance Sheet	Income Statement	Manufacturing Statement	Overhead Report
1 Accounts receivable				
2 Computer supplies used in office				
3 Beginning finished goods inventory				
4 Beginning goods in process inventory				
5 Beginning raw materials inventory				
6 Cash				
7 Depreciation expense—Factory building				
8 Depreciation expense—Factory equipment				
9 Depreciation expense—Office building				
10 Depreciation expense—Office equipment				
11 Direct labor				
12 Ending finished goods inventory				
13 Ending goods in process inventory				
14 Ending raw materials inventory				
15 Factory maintenance wages				
16 Computer supplies used in factory				
17 Income taxes				
18 Insurance on factory building				
19 Rent cost on office building				
20 Office supplies used				
21 Property taxes on factory building				
22 Raw materials purchases				
23 Sales				

**Exercise 1-13**

Manufacturing statement preparation P2

Given the following selected account balances of Spalding Company, prepare its manufacturing statement for the year ended on December 31, 2009. Include a listing of the individual overhead account balances in this statement.

Sales .....	\$1,363,000
Raw materials inventory, Dec. 31, 2008 .....	40,000
Goods in process inventory, Dec. 31, 2008 .....	53,600
Finished goods inventory, Dec. 31, 2008 .....	60,400
Raw materials purchases .....	181,900
Direct labor .....	243,000
Factory computer supplies used .....	15,700
Indirect labor .....	54,000
Repairs—Factory equipment .....	7,250
Rent cost of factory building .....	56,000
Advertising expense .....	92,000
General and administrative expenses .....	140,000
Raw materials inventory, Dec. 31, 2009 .....	44,000
Goods in process inventory, Dec. 31, 2009 .....	41,200
Finished goods inventory, Dec. 31, 2009 .....	66,200

**Check** Cost of goods manufactured, \$566,250

**Exercise 1-14**

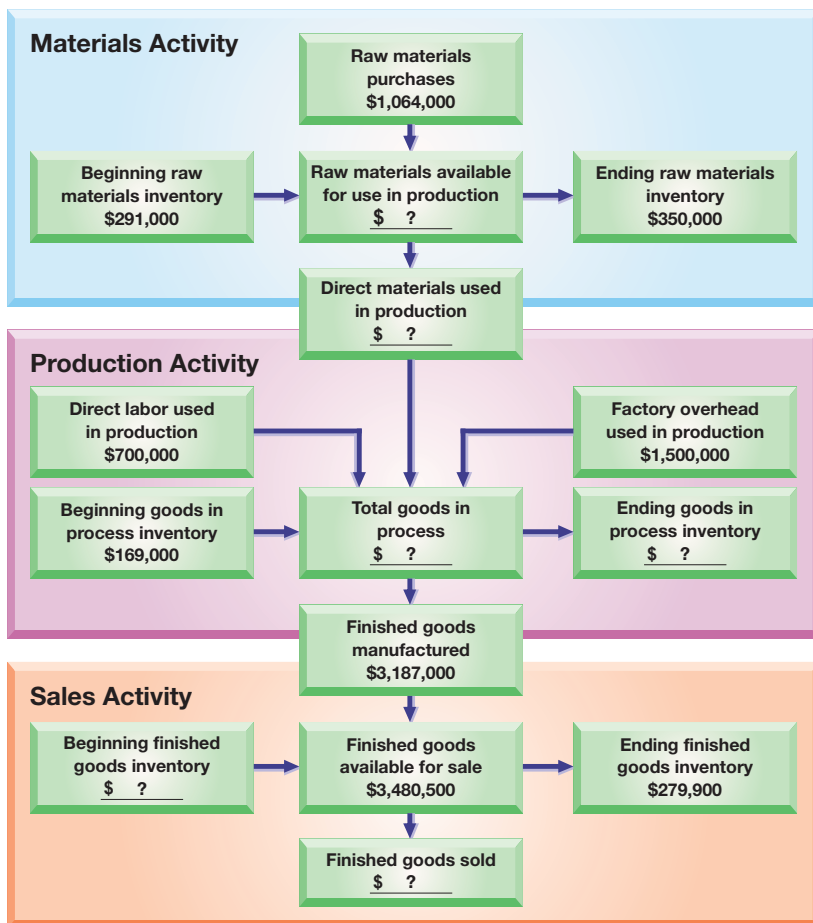

Income statement preparation P2

Use the information in Exercise 1-13 to prepare an income statement for Spalding Company (a manufacturer). Assume that its cost of goods manufactured is \$566,250.

**Exercise 1-15**

Cost flows in manufacturing C7 P2

The following chart shows how costs flow through a business as a product is manufactured. Some boxes in the flowchart show cost amounts. Compute the cost amounts for the boxes that contain question marks.

Fraud affects **Best Buy**. Refer to Best Buy's financial statements in Appendix A to answer the following:

**Exercise 1-16**

1. Explain how inventory losses (such as theft) impact how Best Buy reports inventory on its balance sheet.
2. In what income statement account does Best Buy report inventory losses?

C3

*Problem Set B located at the end of Problem Set A is provided for each problem to reinforce the learning process.*

**connect** Most materials in this section are available in McGraw-Hill's Connect

This chapter explained the purpose of managerial accounting in the context of the current business environment. Review the *automobile* section of your local newspaper; the Sunday paper is often best. Review advertisements of sport-utility vehicles and identify the manufacturers that offer these products and the factors on which they compete.

**Required**

Discuss the potential contributions and responsibilities of the managerial accounting professional in helping an automobile manufacturer succeed. (*Hint*: Think about information and estimates that a managerial accountant might provide new entrants into the sport-utility market.)

**PROBLEM SET A**

**Problem 1-1A**

Managerial accounting role

C1 C2

Many fast-food restaurants compete on lean business concepts. Match each of the following activities at a fast-food restaurant with the lean business concept it strives to achieve. Some activities might relate to more than one lean business concept.

**Problem 1-2A**

Lean business concepts

- |   |                                   |
|---|-----------------------------------|
| _____ 1. Courteous employees                | a. Just-in-time (JIT)             |
| _____ 2. Food produced to order             | b. Continuous improvement (CI)    |
| _____ 3. New product development            | c. Total quality management (TQM) |
| _____ 4. Clean tables and floors            |                                   |
| _____ 5. Orders filled within three minutes |                                   |
| _____ 6. Standardized food making processes |                                   |

C2 

[continued on next page]

- \_\_\_\_\_ 7. Customer satisfaction surveys
- \_\_\_\_\_ 8. Continually changing menus
- \_\_\_\_\_ 9. Drive-through windows
- \_\_\_\_\_ 10. Standardized menus from location to location

**Problem 1-3A**

Cost computation, classification, and analysis

Listed here are the total costs associated with the 2009 production of 700 drum sets manufactured by Roland. The drum sets sell for \$600 each.

Costs	Cost by Behavior		Cost by Function	
	Variable	Fixed	Product	Period
1. Drum stands (700 stands outsourced)—\$17,500	\$17,500		\$17,500	
2. Annual flat fee for maintenance service—\$7,000				
3. Rent cost of equipment for sales staff—\$12,000				
4. Upper management salaries—\$170,000				
5. Wages of assembly workers—\$59,500				
6. Property taxes on factory—\$3,500				
7. Accounting staff salaries—\$42,000				
8. Machinery depreciation—\$28,000				
9. Sales commissions—\$20 per unit				
10. Plastic for casing—\$12,600				

**Required**

- Classify each cost and its amount as (a) either fixed or variable and (b) either product or period (the last cost is completed as an example).
- Compute the manufacturing cost per drum set.

**Analysis Component**

- Assume that 1,000 drum sets are produced in the next month. What do you predict will be the total cost of plastic for the casings and the per unit cost of the plastic for the casings? Explain.
- Assume that 1,000 drum sets are produced in the next month. What do you predict will be the total cost of property taxes and the per unit cost of the property taxes? Explain.

**Check** (1) Total variable manufacturing cost, \$89,600

**Problem 1-4A**

Cost classification and explanation

Assume that you must make a presentation to the marketing staff explaining the difference between product and period costs. Your supervisor tells you the marketing staff would also like clarification regarding prime and conversion costs and an explanation of how these terms fit with product and period cost. You are told that many on the staff are unable to classify costs in their merchandising activities.

**Required**

Prepare a one-page memorandum to your supervisor outlining your presentation to the marketing staff.

**Problem 1-5A**

Opportunity cost estimation and application

Refer to *Decision Maker, Purchase Manager*, in this chapter. Assume that you are the motorcycle manufacturer's managerial accountant. The purchasing manager asks you about preparing an estimate of the related costs for buying motorcycle seats from supplier (B). She tells you this estimate is needed because unless dollar estimates are attached to nonfinancial factors, such as lost production time, her supervisor will not give it full attention. The manager also shows you the following information.

- Production output is 1,000 motorcycles per year based on 250 production days a year.
- Production time per day is 8 hours at a cost of \$2,000 per hour to run the production line.
- Lost production time due to poor quality is 1%.
- Satisfied customers purchase, on average, three motorcycles during a lifetime.
- Satisfied customers recommend the product, on average, to five other people.
- Marketing predicts that using seat (B) will result in five lost customers per year from repeat business and referrals.
- Average contribution margin per motorcycle is \$3,000.

**Required**

Estimate the costs (including opportunity costs) of buying motorcycle seats from supplier (B). This problem requires that you think creatively and make reasonable estimates; thus there could be more than one correct answer. (*Hint:* Reread the answer to *Decision Maker* and compare the cost savings for buying from supplier [B] to the sum of lost customer revenue from repeat business and referrals and the cost of lost production time.)

**Check** Estimated cost of lost production time, \$40,000

Laredo Boot Company makes specialty boots for the rodeo circuit. On December 31, 2008, the company had (a) 300 pairs of boots in finished goods inventory and (b) 1,400 heels at a cost of \$16 each in raw materials inventory. During 2009, the company purchased 46,000 additional heels at \$16 each and manufactured 16,800 pairs of boots.

**Problem 1-6A**

Ending inventory computation and evaluation

C2 C6 

**Required**

- Determine the unit and dollar amounts of raw materials inventory in heels at December 31, 2009.

**Check** (1) Ending (heel) inventory, 13,800 units; \$220, 800

**Analysis Component**

- Write a one-half page memorandum to the production manager explaining why a just-in-time inventory system for heels should be considered. Include the amount of working capital that can be reduced at December 31, 2009, if the ending heel raw material inventory is cut by 75%.

Shown here are annual financial data at December 31, 2009, taken from two different companies.

	Active Sports Retail	Sno-Board Manufacturing
Beginning inventory		
Merchandise	\$145,000	
Finished goods		\$340,000
Cost of purchases	240,000	
Cost of goods manufactured		582,000
Ending inventory		
Merchandise	110,000	
Finished goods		150,000

**Problem 1-7A**

Inventory computation and reporting

C4 C6 P1

  
mhhe.com/wildMA2e

**Required**

- Compute the cost of goods sold section of the income statement at December 31, 2009, for each company. Include the proper title and format in the solution.
- Write a half-page memorandum to your instructor (a) identifying the inventory accounts and (b) describing where each is reported on the income statement and balance sheet for both companies.

**Check** (1) Sno-Board's cost of goods sold, \$772,000

The following calendar year-end information is taken from the December 31, 2009, adjusted trial balance and other records of Gucci Company.

**Problem 1-8A**

Manufacturing and income statements; inventory analysis P2

Advertising expense	\$ 26,600	Direct labor	\$ 680,400
Depreciation expense—Office equipment	11,500	Income taxes expense	291,500
Depreciation expense—Selling equipment	10,800	Indirect labor	58,800
Depreciation expense—Factory equipment	38,200	Miscellaneous production costs	9,800
Factory supervision	105,700	Office salaries expense	74,000
Factory supplies used	7,800	Raw materials purchases	965,000
Factory utilities	34,000	Rent expense—Office space	23,000
Inventories		Rent expense—Selling space	25,200
Raw materials, December 31, 2008	165,900	Rent expense—Factory building	81,600
Raw materials, December 31, 2009	187,000	Maintenance expense—Factory equipment	37,100
Goods in process, December 31, 2008	18,100	Sales	4,630,000
Goods in process, December 31, 2009	24,600	Sales discounts	63,600
Finished goods, December 31, 2008	164,100	Sales salaries expense	398,400
Finished goods, December 31, 2009	135,900		

**Check** (1) Cost of goods manufactured, \$1,990,800

**Required**

1. Prepare the company's 2009 manufacturing statement.
2. Prepare the company's 2009 income statement that reports separate categories for (a) selling expenses and (b) general and administrative expenses.

**Analysis Component**

3. Compute the (a) inventory turnover, defined as cost of goods sold divided by average inventory, and (b) days' sales in inventory, defined as 365 times ending inventory divided by cost of goods sold, for both its raw materials inventory and its finished goods inventory. (To compute turnover and days' sales in inventory for raw materials, use raw materials used rather than cost of goods sold.) Discuss some possible reasons for differences between these ratios for the two types of inventories.

**Problem 1-9A**

Manufacturing cycle time and efficiency

Mission Oak Company produces oak bookcases to customer order. It received an order from a customer to produce 5,000 bookcases. The following information is available for the production of the bookcases.

Process time	18.0 days
Inspection time	2.0 days
Move time	4.4 days
Wait time	20.6 days

**Required**

1. Compute the company's manufacturing cycle time.
2. Compute the company's manufacturing cycle efficiency. Interpret your answer.

**Check** (2) Manufacturing cycle efficiency, 0.40

**Analysis Component**

3. Assume that Mission Oak wishes to increase its manufacturing cycle efficiency to 0.75. What are some ways that it can accomplish this?

**PROBLEM SET B**

**Problem 1-1B**

Managerial accounting role

This chapter described the purpose of managerial accounting in the context of the current business environment. Review the *home electronics* section of your local newspaper; the Sunday paper is often best. Review advertisements of home electronics and identify the manufacturers that offer these products and the factors on which they compete.

**Required**

Discuss the potential contributions and responsibilities of the managerial accounting professional in helping a home electronics manufacturer succeed. (*Hint:* Think about information and estimates that a managerial accountant might provide new entrants into the home electronics market.)

**Problem 1-2B**

Lean business concepts

**Eastman-Kodak** manufactures digital cameras and must compete on lean manufacturing concepts. Match each of the following activities that it engages in with the lean manufacturing concept it strives to achieve. (Some activities might relate to more than one lean manufacturing concept.)

- |  |  |
|--|--|
| _____ 1. Lenses are received daily based on customer orders.   | <b>a.</b> Just-in-time (JIT)             |
| _____ 2. Customers receive a satisfaction survey with each camera purchased.                           | <b>b.</b> Continuous improvement (CI)    |
| _____ 3. The manufacturing process is standardized and documented.                                     | <b>c.</b> Total quality management (TQM) |
| _____ 4. Cameras are produced in small lots, and only to customer order.                               |  |
| _____ 5. Manufacturing facilities are arranged to reduce move time and wait time.                      |  |
| _____ 6. Kodak conducts focus groups to determine new features that customers want in digital cameras. |  |

[continued on next page]

- \_\_\_\_\_ 7. Orders received are filled within two business days.
- \_\_\_\_\_ 8. Kodak works with suppliers to reduce inspection time of incoming materials.
- \_\_\_\_\_ 9. Kodak monitors the market to determine what features its competitors are offering on digital cameras.
- \_\_\_\_\_ 10. Kodak asks production workers for ideas to improve production.

Listed here are the total costs associated with the production of 10,000 Blu-ray Discs (BDs) manufactured by New Age. The BDs sell for \$15 each.

Costs	Cost by Behavior		Cost by Function	
	Variable	Fixed	Product	Period
1. Annual fixed fee for cleaning service—\$3,000		\$3,000		\$3,000
2. Cost of office equipment rent—\$700				
3. Upper management salaries—\$100,000				
4. Labeling (10,000 outsourced)—\$2,500				
5. Wages of assembly workers—\$20,000				
6. Sales commissions—\$0.50 per BD				
7. Machinery depreciation—\$15,000				
8. Systems staff salaries—\$10,000				
9. Cost of factory rent—\$4,500				
10. Plastic for BDs—\$1,000				

**Problem 1-3B**

Cost computation, classification, and analysis

**Required**

1. Classify each cost and its amount as (a) either fixed or variable and (b) either product or period.
2. Compute the manufacturing cost per BD.

**Check** (2) Total variable manufacturing cost, \$23,500

**Analysis Component**

3. Assume that 12,000 BDs are produced in the next month. What do you predict will be the total cost of plastic for the BDs and the per unit cost of the plastic for the BDs? Explain.
4. Assume that 12,000 BDs are produced in the next month. What do you predict will be the total cost of factory rent and the per unit cost of the factory rent? Explain.

Assume that you must make a presentation to a client explaining the difference between prime and conversion costs. The client makes and sells 200,000 cookies per week. The client tells you that her sales staff also would like a clarification regarding product and period costs. She tells you that most of the staff lack training in managerial accounting.

**Problem 1-4B**

Cost classification and explanation

**Required**

Prepare a one-page memorandum to your client outlining your planned presentation to her sales staff.

Refer to *Decision Maker, Purchase Manager*, in this chapter. Assume that you are the motorcycle manufacturer's managerial accountant. The purchasing manager asks you about preparing an estimate of the related costs for buying motorcycle seats from supplier (B). She tells you this estimate is needed because unless dollar estimates are attached to nonfinancial factors such as lost production time, her supervisor will not give it full attention. The manager also shows you the following information.

**Problem 1-5B**

Opportunity cost estimation and application

- Production output is 1,000 motorcycles per year based on 250 production days a year.
- Production time per day is 8 hours at a cost of \$500 per hour to run the production line.
- Lost production time due to poor quality is 1%.
- Satisfied customers purchase, on average, three motorcycles during a lifetime.
- Satisfied customers recommend the product, on average, to four other people.
- Marketing predicts that using seat (B) will result in four lost customers per year from repeat business and referrals.
- Average contribution margin per motorcycle is \$4,000.

**Required**

Estimate the costs (including opportunity costs) of buying motorcycle seats from supplier (B). This problem requires that you think creatively and make reasonable estimates; thus there could be more than one correct answer. (*Hint:* Reread the answer to *Decision Maker*, and compare the cost savings for buying from supplier [B] to the sum of lost customer revenue from repeat business and referrals and the cost of lost production time.)

**Check** Cost of lost customer revenue, \$16,000

**Problem I-6B**

Ending inventory computation and evaluation

C2 C6 

CCMD Company makes specialty skates for the ice skating circuit. On December 31, 2008, the company had (a) 1,500 skates in finished goods inventory and (b) 2,500 blades at a cost of \$15 each in raw materials inventory. During 2009, CCMD purchased 45,000 additional blades at \$15 each and manufactured 20,000 pairs of skates.

**Required**

1. Determine the unit and dollar amounts of raw materials inventory in blades at December 31, 2009.

**Analysis Component**

2. Write a one-half page memorandum to the production manager explaining why a just-in-time inventory system for blades should be considered. Include the amount of working capital that can be reduced at December 31, 2009, if the ending blade raw material inventory is cut in half.

**Check** (1) Ending (blade) inventory, 7,500 units; \$112,500

**Problem I-7B**

Inventory computation and reporting

C4 C6 P1

Shown here are annual financial data at December 31, 2009, taken from two different companies.

	AAA Imports (Retail)	Marina Boats (Manufacturing)
Beginning inventory		
Merchandise . . . . .	\$ 50,000	
Finished goods . . . . .		\$200,000
Cost of purchases . . . . .	350,000	
Cost of goods manufactured . . . . .		686,000
Ending inventory		
Merchandise . . . . .	25,000	
Finished goods . . . . .		300,000

**Required**

1. Compute the cost of goods sold section of the income statement at December 31, 2009, for each company. Include the proper title and format in the solution.
2. Write a half-page memorandum to your instructor (a) identifying the inventory accounts and (b) identifying where each is reported on the income statement and balance sheet for both companies.

**Check** (1) AAA Imports cost of goods sold, \$375,000

**Problem I-8B**

Manufacturing and income statements; analysis of inventories

P2

The following calendar year-end information is taken from the December 31, 2009, adjusted trial balance and other records of Homestyle Furniture.

Advertising expense	\$ 22,250	Direct labor	\$ 564,500
Depreciation expense—Office equipment	10,440	Income taxes expense	138,700
Depreciation expense—Selling equipment	12,125	Indirect labor	61,000
Depreciation expense—Factory equipment	37,400	Miscellaneous production costs	10,440
Factory supervision	123,500	Office salaries expense	72,875
Factory supplies used	8,060	Raw materials purchases	896,375
Factory utilities	39,500	Rent expense—Office space	25,625
Inventories		Rent expense—Selling space	29,000
Raw materials, December 31, 2008	42,375	Rent expense—Factory building	95,500
Raw materials, December 31, 2009	72,430	Maintenance expense—Factory equipment	32,375
Goods in process, December 31, 2008	14,500	Sales	5,002,000
Goods in process, December 31, 2009	16,100	Sales discounts	59,375
Finished goods, December 31, 2008	179,200	Sales salaries expense	297,300
Finished goods, December 31, 2009	143,750		

**Required**

1. Prepare the company's 2009 manufacturing statement.
2. Prepare the company's 2009 income statement that reports separate categories for (a) selling expenses and (b) general and administrative expenses.

**Check** (1) Cost of goods manufactured, \$1,836,995

**Analysis Component**

3. Compute the (a) inventory turnover, defined as cost of goods sold divided by average inventory, and (b) days' sales in inventory, defined as 365 times ending inventory divided by cost of goods sold, for both its raw materials inventory and its finished goods inventory. (To compute turnover and days' sales in inventory for raw materials, use raw materials used rather than cost of goods sold.) Discuss some possible reasons for differences between these ratios for the two types of inventories.

Fast Ink produces ink-jet printers for personal computers. It received an order for 400 printers from a customer. The following information is available for this order.

Process time	8.0 hours
Inspection time	1.7 hours
Move time	4.5 hours
Wait time	10.8 hours

**Problem 1-9B**

Manufacturing cycle time and efficiency

A1 

**Required**

1. Compute the company's manufacturing cycle time.
2. Compute the company's manufacturing cycle efficiency. Interpret your answer.

**Analysis Component**

3. Assume that Fast Ink wishes to increase its manufacturing cycle efficiency to 0.80. What are some ways that it can accomplish this?

*The serial problem starts in this chapter and continues throughout most chapters of the book.*

**SP 1** On October 1, 2009, Adriana Lopez launched a computer services and merchandising company, **Success Systems**, that offers consulting services, system installation, and business software sales. In late 2009, Adriana decides to diversify her business by also manufacturing computer workstation furniture.

**SERIAL PROBLEM**

Success Systems

**Required**

1. Classify the following manufacturing costs of Success Systems by behavior and traceability.

Product Costs	Cost by Behavior		Cost by Traceability	
	Variable	Fixed	Direct	Indirect
1. Monthly flat fee to clean workshop . . . . .	—	—	—	—
2. Laminate coverings for desktops . . . . .	—	—	—	—
3. Taxes on assembly workshop . . . . .	—	—	—	—
4. Glue to assemble workstation component parts . . . . .	—	—	—	—
5. Wages of desk assembler . . . . .	—	—	—	—
6. Electricity for workshop . . . . .	—	—	—	—
7. Depreciation on tools . . . . .	—	—	—	—

- Prepare a manufacturing statement for Success Systems for the month ended January 31, 2010. Assume the following manufacturing costs:  
 Direct materials: \$2,200  
 Factory overhead: \$490  
 Direct labor: \$900  
 Beginning goods in process: none (December 31, 2009)  
 Ending goods in process: \$540 (January 31, 2010)  
 Beginning finished goods inventory: none (December 31, 2009)  
 Ending finished goods inventory: \$350 (January 31, 2010)
- Prepare the cost of goods sold section of a partial income statement for Success Systems for the month ended January 31, 2010.

**Check** (3) COGS, \$2,700

*Beyond the Numbers (BTN) is a special problem section aimed to refine communication, conceptual, analysis, and research skills. It includes many activities helpful in developing an active learning environment.*

## BEYOND THE NUMBERS

### REPORTING IN ACTION

C1 C2 

**BTN 1-1** Managerial accounting is more than recording, maintaining, and reporting financial results. Managerial accountants must provide managers with both financial and nonfinancial information including estimates, projections, and forecasts. There are many accounting estimates that management accountants must make, and **Best Buy** must notify shareholders of these estimates.

**Required**

- Access and read Best Buy’s “Critical Accounting Estimates” section (six pages), which is part of its *Management’s Discussion and Analysis of Financial Condition and Results of Operations* section, from either its annual report or its 10-K for the year ended March 3, 2007 [[BestBuy.com](http://BestBuy.com)]. What are some of the accounting estimates that Best Buy made in preparing its financial statements? What are some of the effects if the actual results of Best Buy differ from its assumptions?
- What is the management accountant’s role in determining those estimates?

**Fast Forward**

- Access **Best Buy**’s annual report for a fiscal year ending after March 3, 2007, from either its Website [[BestBuy.com](http://BestBuy.com)] or the SEC’s EDGAR database [[www.sec.gov](http://www.sec.gov)]. Answer the questions in parts (1) and (2) after reading the current MD&A section. Identify any major changes.

### COMPARATIVE ANALYSIS

C1 C2 

**BTN 1-2** **Best Buy** and **RadioShack** are both merchandisers that rely on customer satisfaction. Access and read (1) Best Buy’s “Business Strategy and Core Philosophies” section (one page) and (2) RadioShack’s “Financial Impact of Turnaround Program” section (one page). Both sections are located in the respective company’s *Management Discussion and Analysis of Financial Condition and Results of Operations* section from the annual report or 10-K. The Best Buy report is for the year ended March 3, 2007, and the RadioShack report is for the year ended December 31, 2006.

**Required**

1. Identify the strategic initiatives that each company put forward in its desire to better compete and succeed in the marketplace.
2. For each of these strategic initiatives for both companies, explain how it reflects (or does not reflect) a customer satisfaction focus.

**BTN 1-3** Assume that you are the managerial accountant at Infostore, a manufacturer of hard drives, CDs, and diskettes. Its reporting year-end is December 31. The chief financial officer is concerned about having enough cash to pay the expected income tax bill because of poor cash flow management. On November 15, the purchasing department purchased excess inventory of CD raw materials in anticipation of rapid growth of this product beginning in January. To decrease the company's tax liability, the chief financial officer tells you to record the purchase of this inventory as part of supplies and expense it in the current year; this would decrease the company's tax liability by increasing expenses.

**Required**

1. In which account should the purchase of CD raw materials be recorded?
2. How should you respond to this request by the chief financial officer?

**ETHICS  
CHALLENGE**C3 C4 C5 

**BTN 1-4** Write a one-page memorandum to a prospective college student about salary expectations for graduates in business. Compare and contrast the expected salaries for accounting (including different subfields such as public, corporate, tax, audit, and so forth), marketing, management, and finance majors. Prepare a graph showing average starting salaries (and those for experienced professionals in those fields if available). To get this information, stop by your school's career services office; libraries also have this information. The Website [JobStar.org](http://JobStar.org) (click on *Salary Info*) also can get you started.

**COMMUNICATING  
IN PRACTICE**

**BTN 1-5** Managerial accounting professionals follow a code of ethics. As a member of the Institute of Management Accountants, the managerial accountant must comply with Standards of Ethical Conduct.

**Required**

1. Identify, print, and read the *Statement of Ethical Professional Practice* posted at [www.ima.org](http://www.ima.org). (Search using "ethical professional practice.")
2. What four overarching ethical principles underlie the IMA's statement?
3. Describe the courses of action the IMA recommends in resolving ethical conflicts.

**TAKING IT TO  
THE NET**C1 C3 

**TEAMWORK IN ACTION**

C7 P2

**BTN 1-6** The following calendar-year information is taken from the December 31, 2009, adjusted trial balance and other records of Dahlia Company.

Advertising expense	\$ 19,125	Direct labor	\$ 650,750
Depreciation expense—Office equipment	8,750	Indirect labor	60,000
Depreciation expense—Selling equipment	10,000	Miscellaneous production costs	8,500
Depreciation expense—Factory equipment	32,500	Office salaries expense	100,875
Factory supervision	122,500	Raw materials purchases	872,500
Factory supplies used	15,750	Rent expense—Office space	21,125
Factory utilities	36,250	Rent expense—Selling space	25,750
Inventories		Rent expense—Factory building	79,750
Raw materials, December 31, 2008	177,500	Maintenance expense—Factory equipment	27,875
Raw materials, December 31, 2009	168,125	Sales	3,275,000
Goods in process, December 31, 2008	15,875	Sales discounts	57,500
Goods in process, December 31, 2009	14,000	Sales salaries expense	286,250
Finished goods, December 31, 2008	164,375		
Finished goods, December 31, 2009	129,000		

**Required**

- Each team member is to be responsible for computing **one** of the following amounts. You are not to duplicate your teammates' work. Get any necessary amounts from teammates. Each member is to explain the computation to the team in preparation for reporting to class.
  - Materials used.
  - Factory overhead.
  - Total manufacturing costs.
  - Total cost of goods in process.
  - Cost of goods manufactured.
- Check your cost of goods manufactured with the instructor. If it is correct, proceed to part (3).
- Each team member is to be responsible for computing **one** of the following amounts. You are not to duplicate your teammates' work. Get any necessary amounts from teammates. Each member is to explain the computation to the team in preparation for reporting to class.
  - Net sales.
  - Cost of goods sold.
  - Gross profit.
  - Total operating expenses.
  - Net income or loss before taxes.

**Point:** Provide teams with transparencies and markers for presentation purposes.

**ENTREPRENEURIAL DECISION**

C1 C4  

**BTN 1-7** Brian Taylor of **Kernel Season's** must understand his manufacturing costs to effectively operate and succeed as a profitable and efficient company.

**Required**

- What are the three main categories of manufacturing costs that Brian must monitor and control? Provide examples of each.
- How can Brian make the Kernel Season's manufacturing process more cost-effective? Provide examples of two useful managerial measures of time and efficiency.
- What are four goals of a total quality management process? How can Kernel Season's use TQM to improve its business activities?

**HITTING THE ROAD**

C1 C5 

**BTN 1-8** Visit your favorite fast-food restaurant. Observe its business operations.

**Required**

- Describe all business activities from the time a customer arrives to the time that customer departs.
- List all costs you can identify with the separate activities described in part 1.
- Classify each cost from part 2 as fixed or variable, and explain your classification.

---

**BTN 1-9** Access **DSG's** annual report for the year ended April 28, 2007 ([www.DSGiplc.com](http://www.DSGiplc.com)). Read the section "Corporate Governance" dealing with the responsibilities of the board of directors.

**GLOBAL DECISION**

**DSG**

**Required**

1. Identify the responsibilities (see the "schedule of matters reserved for the board") of DSG's board of directors.
2. How would management accountants be involved in assisting the board of directors in carrying out their responsibilities? Explain.

---

**ANSWERS TO MULTIPLE CHOICE QUIZ**

1. c
2. b
3. b
4. a
5. Beginning finished goods + Cost of goods manufactured (COGM) –  
Ending finished goods = Cost of goods sold  
 $\$6,000 + \text{COGM} - \$3,200 = \$7,500$   
 $\text{COGM} = \underline{\underline{\$4,700}}$
