Chapter 3

History and Geography: THE FOUNDATIONS OF CULTURE

CHAPTER OUTLINE

Global Perspective: Birth of a Nation—Panama in 67 Hours

Historical Perspective in Global Business
   History and Contemporary Behavior
   History Is Subjective
   Manifest Destiny and the Monroe Doctrine

Geography and Global Markets
   Climate and Topography
   Geography, Nature, and Economic Growth
   Social Responsibility and Environmental Management
   Resources

Dynamics of Global Population Trends
   Controlling Population Growth
   Rural/Urban Migration
   Population Decline and Aging
   Worker Shortage and Immigration

World Trade Routes

Communication Links

CHAPTER LEARNING OBJECTIVES

What you should learn from Chapter 3:

LO1 The importance of history and geography in understanding international markets

LO2 The effects of history on a country’s culture

LO3 How culture interprets events through its own eyes

LO4 How long-past U.S. international policies still affect customer attitudes abroad

LO5 The effect of geographic diversity on economic profiles of a country

LO6 Why marketers need to be responsive to the geography of a country

LO7 The economic effects of controlling population growth and aging populations

LO8 Communication infrastructures are an integral part of international commerce
Global Perspective

BIRTH OF A NATION—PANAMA IN 67 HOURS

The Stage Is Set

June 1902  The United States offers to buy the Panama Canal Zone from Colombia for $10 million.

August 1903  The Colombian Senate refuses the offer. Theodore Roosevelt, angered by the refusal, refers to the Colombian Senate as “those contemptible little creatures in Bogotá.” Roosevelt then agrees to a plot, led by secessionist Dr. Manuel Amador, to assist a group planning to secede from Colombia.

October 17  Panamanian dissidents travel to Washington and agree to stage a U.S.-backed revolution. The revolution is set for November 3 at 6:00 p.m.

October 18  A flag, constitution, and declaration of independence are created over the weekend. Panama’s flag was designed and sewn by hand in Highland Falls, New York, using fabric bought at Macy’s.

Philippe Jean Bunau-Varilla, a French engineer associated with the bankrupt French–Panamanian canal construction company and not a permanent resident in Panama, is named Panama’s ambassador to the United States.

A Country Is Born

Tuesday, November 3  Precisely at 6:00 p.m., the Colombian garrison is bribed to lay down their arms. The revolution begins, the U.S.S. Nashville steams into Colón harbor, and the junta proclaims Panama’s independence.

Friday, November 6  By 1:00 p.m., the United States recognizes the sovereign state of Panama.

Saturday, November 7  The new government sends an official delegation from Panama to the United States to instruct the Panamanian ambassador to the United States on provisions of the Panama Canal Treaty.

Wednesday, November 18  At 6:40 p.m., the Panamanian ambassador signs the Panama Canal Treaty. At 11:30 p.m., the official Panamanian delegation arrives at a Washington, DC, railroad station and is met by their ambassador, who informs them that the treaty was signed just hours earlier.

The Present

1977  The United States agrees to relinquish control of the Panama Canal Zone on December 31, 1999.

1997  Autoridad del Canal de Panama, the canal authority that will assume control from the U.S. Panama Canal Commission, is created.

1998  Panama gives a Chinese company the right to build new port facilities on both the Pacific and Atlantic sides, to control anchorages, to hire new pilots to guide ships through the canal, and to block all passage that interferes with the company’s business.

January 1, 2000  “The canal is ours” is the jubilant cry in Panama.

January 17, 2000  The Pentagon sees a potential Chinese threat to the Panama Canal.

July 2002  China pressures Panama to extend diplomatic recognition to China and drop recognition of Taiwan.

2005  The Panama Canal is expected to reach maximum capacity by 2010. The administrative board proposes a $5 billion expansion to add a parallel set of locks in response to the threat of a competing project to build canals or “multimodal” systems across Mexico’s Tehuantepec isthmus. Either expand or “run the risk of eventually becoming just a regional canal.”

2010  A project to double the capacity of the canal begins, scheduled to be completed in 2014.
This story is a good illustration of how history and geography can affect public and political attitudes in the present and far into the future. To the Panamanians and much of Latin America, the Panama Canal is but one example of the many U.S. intrusions during the early 20th century that have tainted U.S.–Latin American relations. For the United States, the geographical importance of the Panama Canal for trade (shipping between the two coasts via the canal is cut by 8,000 miles) makes control of the canal a sensitive issue, especially if that control could be potentially hostile. That a Chinese-owned company has operational control of both the Pacific and Atlantic ports and could pose an indirect threat to the Panama Canal Zone concerns the U.S. government. The recent history of U.S. conflict with China and the history of Western domination of parts of China create in the minds of many an adversarial relationship between the two countries. Furthermore, some wonder if Panama would be reluctant to ask the United States to intervene at some future date, perhaps fearing that the Americans might stay another 98 years. Although the probability of China sabotaging the canal is slim at best, historical baggage makes one wonder what would happen should U.S. relations with China deteriorate to the point that the canal were considered to be in jeopardy.

Here we begin the discussion of the Cultural Environment of Global Markets. Culture can be defined as a society’s accepted basis for responding to external and internal events. To understand fully a society’s actions and its points of view, you must have an appreciation for the influence of historical events and the geographical uniqueness to which a culture has had to adapt. To interpret behavior and attitudes in a particular culture or country, a marketer must have some idea of a country’s history and geography.

The goal of this chapter is to introduce the reader to the impact of history and geography on the marketing process. The influence of history on behavior and attitudes and the influence of geography on markets, trade, and environmental issues are examined in particular.

Historical Perspective in Global Business

History helps define a nation’s “mission,” how it perceives its neighbors, how it sees its place in the world, and how it sees itself. Insights into the history of a country are important for understanding attitudes about the role of government and business, the relations between managers and the managed, the sources of management authority, and attitudes toward foreign corporations.

To understand, explain, and appreciate a people’s image of itself and the attitudes and unconscious fears that are reected in its view of foreign cultures, it is necessary to study the culture as it is now as well as to understand the culture as it was—that is, a country’s history.

Most Americans know the most about European history, even though our major trading partners are now to our west and south. Circa 2008, China became a hot topic in the United States. It was back in 1776 as well. In a sense, American history really begins with China. It was back in 1776 as well. In a sense, American history really begins with China. Recall the Boston Tea Party: Our complaint then was the British tax and, more important, the British prohibition against Yankee traders dealing directly with merchants in Canton. So it is worthwhile to dwell for a few moments on a couple of prominent points in the history of the fast burgeoning market that is modern-day China. James Day Hodgson, former U.S. Labor Secretary and Ambassador to Japan, suggests that anyone doing business in another country should understand at least the encyclopedic version of the people’s past as a matter

Here we begin the discussion of the Cultural Environment of Global Markets. Culture can be defined as a society’s accepted basis for responding to external and internal events. To understand fully a society’s actions and its points of view, you must have an appreciation for the influence of historical events and the geographical uniqueness to which a culture has had to adapt. To interpret behavior and attitudes in a particular culture or country, a marketer must have some idea of a country’s history and geography.

The goal of this chapter is to introduce the reader to the impact of history and geography on the marketing process. The influence of history on behavior and attitudes and the influence of geography on markets, trade, and environmental issues are examined in particular.

Historical Perspective in Global Business

History helps define a nation’s “mission,” how it perceives its neighbors, how it sees its place in the world, and how it sees itself. Insights into the history of a country are important for understanding attitudes about the role of government and business, the relations between managers and the managed, the sources of management authority, and attitudes toward foreign corporations.

To understand, explain, and appreciate a people’s image of itself and the attitudes and unconscious fears that are reected in its view of foreign cultures, it is necessary to study the culture as it is now as well as to understand the culture as it was—that is, a country’s history.

Most Americans know the most about European history, even though our major trading partners are now to our west and south. Circa 2008, China became a hot topic in the United States. It was back in 1776 as well. In a sense, American history really begins with China. Recall the Boston Tea Party: Our complaint then was the British tax and, more important, the British prohibition against Yankee traders dealing directly with merchants in Canton. So it is worthwhile to dwell for a few moments on a couple of prominent points in the history of the fast burgeoning market that is modern-day China. James Day Hodgson, former U.S. Labor Secretary and Ambassador to Japan, suggests that anyone doing business in another country should understand at least the encyclopedic version of the people’s past as a matter

Chapter 3 History and Geography: The Foundations of Culture

of politeness, if not persuasion. As important examples we offer a few perhaps surprising glimpses of the past that continues to influence U.S.–Asia trade relations even today.

**First Opium War and the Treaty of Nanjing (1839–1842).** During the early 1800s, the British taste for tea was creating a huge trade deficit with China. Silver bullion was flowing fast in an easterly direction. Of course, other goods were being traded, too. Exports from China also included sugar, silk, mother-of-pearl, paper, camphor, cassia, copper and alum, lacquer ware, rhubarb, various oils, bamboo, and porcelain. The British “barbarians” returned cotton and woolen textiles, iron, tin, lead, carnelian, diamonds, pepper, betel nuts, pearls, watches and clocks, coral and amber beads, birds’ nests and shark fins, and foodstuffs such as sh and rice. But the tea-for-silver swap dominated the equation.

Then came the English East India Company’s epiphany: opium. Easy to ship, high value to volume and weight ratios, and addicting to customers—what a great product! At the time, the best opium came from British India, and once the flow began, the tea-caused trade deficit disappeared fast. The Emperor complained and issued edicts, but the opium trade burgeoned. One of the taller skyscrapers in Hong Kong today is the Jardine-Matheson Trading House. Its circular windows are reminiscent of the portholes of its clipper-ship beginnings in the opium trade.

In 1836 some high-ranking Chinese officials advocated legalizing opium. The foreign suppliers boosted production and shipments in anticipation of exploding sales. Then the Emperor went the opposite direction and ordered the destruction of the inventories in Canton (now known as Guangzhou). By 1839 the trade was dead. The British responded by sinking junks in the Pearl River and blockading all Chinese ports.

The “magically accurate” British cannon pointed at Nanjing yielded negotiations there in 1842. The Chinese ceded Hong Kong and $21 million pounds to the British. Ports at Xiamen, Fuzhou, Ningbo, and Shanghai were opened to trade and settlement by foreigners. Hong Kong thus became the gateway to a xenophobic China, particularly for the past 50 years. Perhaps most important, China recognized for the first time its loss of great power status.

Ultimately the Opium War became about foreign access to Chinese trade, and the treaty of Nanjing really didn’t settle the issue. A second Opium War was fought between 1857 and 1860. In that imbroglio, British and French forces combined to destroy the summer palace in Beijing. Such new humiliations yielded more freedoms for foreign traders; notably, the treaty specifically included provisions allowing Christian evangelism throughout the realm.

**Taiping Rebellion (1851–1864).** One consequence of the humiliation at the hands of foreigners was a loss of condence in the Chinese government. The resulting disorder came to a head in Guangxi, the southernmost province of the Empire. The leader of the uprising was a peasant who grew up near Guangzhou. Hong Xiuquan aspired to be a

---

2In a very interesting paper, the authors argue that choices made by Jardine’s and Shanghai’s (trading houses) in Asia today, for example, are an outgrowth of strategic choices first in evidence more than a century ago! See Geoffrey Jones and Tarun Khanna, “Bringing History (Back) into International Business,” Journal of International Business Studies 37 (2006), pp. 453–68.
civil servant but failed the required Confucian teachings–based exam. When in Guangzhou for his second try at the exam, he came in contact with Protestant Western missionaries and later began to have visions of God.

After unk...ing the exam for a fourth time in 1843, he began to evangelize, presenting himself as Christ’s brother. In the next seven years, he attracted 10,000 followers. In 1851, he was crowned by his followers as the “Heavenly King” of the “Heavenly Kingdom of Peace.” Despite their adopted label, they revolted, cut off their pigtails in defiance of the ruling Manchus, and began to march north. With the fervor of the religious zealots they were, they fought their way through the capital at Nanjing and almost to Tianjing by 1855.

But then things started to unravel. Chinese opposition forces organized. Because foreigners appreciated neither Hong’s interpretation of the scriptures, nor his 88 concubines, nor his attacks on Shanghai, they formed another army against him. Hong took his own life just before the nal defeat and the recapture of Nanjing.

Estimates of the death toll from the Taiping Rebellion stand between 20 and 40 million people. We repeat: 20–40 million Chinese lives were lost. By contrast, “only” 2 million were killed in the 1949 Communist Revolution. The Taiping Rebellion is the single most horri c civil war in the history of the world. Surely Hong Xiuquan was insane. Other rebellions also occurred in China during this time; the Muslim one in the northwest is most notable (1862–78). However, based on these events in the mid-1800s, it is easy to see why the Chinese leadership has remained wary of foreign in uences in general, and religious movements in particular, even today.1

History and Japan. Trade with Japan was a hot topic in the United States in both the 1850s and the 1980s. Likewise, unless you have a historical sense of the many changes that have buffeted Japan—seven centuries under the shogun feudal system, the isolation before the arrival of Commodore Perry in 1853, the threat of domination by colonial powers, the rise of new social classes, Western in uences, the humiliation of World War II, and involvement in the international community—you will have dif culty fully understanding its contemporary behavior. Why do the Japanese have such strong loyalty toward their companies? Why is the loyalty found among participants in the Japanese distribution systems so dif cult for an outsider to develop? Why are decisions made by consensus? Answers to such questions can be explained in part by Japanese history (and geography).

Loyalty to family, to country, to company, and to social groups and the strong drive to cooperate, to work together for a common cause, permeate many facets of Japanese behavior and have historical roots that date back thousands of years. Historically, loyalty and service, a sense of responsibility, and respect for discipline, training, and artistry were stressed to maintain stability and order. Confucian philosophy, taught throughout Japan’s history, emphasizes the basic virtue of loyalty “of friend to friend, of wife to husband, of child to parent, of brother to brother, but, above all, of subject to lord,” that is, to country.

1315 A great famine hits Europe, lasting two years, more widespread and longer than any before
1348 The Plague (the Black Death) kills one-fourth to one-third of the population in Europe (25 million people) in just three years, disrupting trade as cities try to prevent the spread of the disease by restricting visitors; it likely started in Asia in the 1320s; massive inflation took hold, because goods could only be obtained locally; serfs were in high demand and began moving to higher wage payers, forever altering Europe’s labor landscape
1358 German Hanseatic League officially forms by the Hanza companies of merchants for trade and mutual protection, eventually encompassing more than 70 cities and lasting nearly 300 years
1375 Timur Lang the Turk conquers lands from Moscow to Delhi
1381 English rioters kill foreign Flemish traders as part of the 100,000-strong peasant rebellion against Richard II, which was led by Wat Tyler in a failed attempt to throw off the yoke of feudalism
1392 England prohibits foreigners from retailing goods in the country
1400 Koreans develop movable-type printing (see 1450)
A fundamental premise of Japanese ideology reflects the importance of cooperation for the collective good. Japanese achieve consensus by agreeing that all will unite against outside pressures that threaten the collective good. A historical perspective gives the foreigner in Japan a basis on which to begin developing cultural sensitivity and a better understanding of contemporary Japanese behavior.

History is important in understanding why a country behaves as it does, but history from whose viewpoint? Historical events always are viewed from one’s own biases and self-reference criteria (SRC), and thus, what is recorded by one historian may not be what another records, especially if the historians are from different cultures. Historians traditionally try to be objective, but few can help filtering events through their own cultural biases.

Our perspective not only unites our view of history but also subtly unites our view of many other matters. For example, maps of the world sold in the United States generally show the United States at the center, whereas maps in Britain show Britain at the center, and so on for other nations.

A crucial element in understanding any nation’s business and political culture is the subjective perception of its history. Why do Mexicans have a love–hate relationship with the United States? Why were Mexicans required to have majority ownership in most foreign investments until recently? Why did dictator General Porfirio Díaz lament, “Poor Mexico, so far from God, so near the United States”? Why? Because Mexicans see the United States as a threat to their political, economic, and cultural sovereignty.

Most citizens of the United States are mystified by such feelings. After all, the United States has always been Mexico’s good neighbor. Most would agree with President John F. Kennedy’s proclamation during a visit to Mexico that “Geography has made us neighbors, tradition has made us friends.” North Americans may be surprised to learn that most Mexicans “felt it more accurate to say ‘Geography has made us closer, tradition has made us far apart.’”

Citizens of the United States feel they have been good neighbors. They see the Monroe Doctrine as protection for Latin America from European colonization and the intervention of Europe in the governments of the Western Hemisphere. Latin Americans, in contrast, tend to see the Monroe Doctrine as an offensive expression of U.S. in unction in Latin America. To put it another way, “Europe keep your hands off—Latin America is only for the United States,” an attitude perhaps typified by former U.S. President Ulysses S. Grant, who, in a speech in Mexico in 1880, described Mexico as a “magnificent mine” that lay waiting south of the border for North American interests.

United States Marines sing with pride of their exploits “from the halls of Montezuma to the shores of Tripoli.” To the Mexican, the exploit to which the “halls of Montezuma”

1404 Chinese prohibit private trading in foreign countries, but foreign ships may trade in China with official permission
1415 Chinese begin significant trading with Africa through government expeditions—some believe they sailed to North America as well in 1421
1425 Hanseatic city of Brugge becomes the first Atlantic seaport to be a major trading center
1427 Aztec Empire is created by Itzcoatl; it will encompass about 6 million people before its destruction in 1519
1430 Portuguese Prince Henry the Navigator explores west African coast to promote trade
1441 Mayan Empire collapses as the city of Mayapán is destroyed in a revolt
1450 Gutenberg Bible is first book printed with movable type; the ability to mass produce books creates an information revolution
1453 Byzantine Empire is destroyed as Muhammad II sacks Constantinople (renaming it Istanbul)
1464 French royal mail service established by Louis XI
1470 Early trademark piracy committed by Persians who copy mass-produced Chinese porcelain to capitalize on its popularity in foreign countries
1479 Under the Treaty of Constantinople, in exchange for trading rights in the Black Sea, Venice agrees to pay tribute to the Ottoman Empire
1482 English organize a postal system that features fresh relays of horses every 20 miles

---

5 For an insightful review of some of the issues that have affected relations between the United States and Mexico, see John Skirius, “Railroad, Oil and Other Foreign Interest in the Mexican Revolution, 1911–1914,” Journal of Latin American Studies, February 2003, p. 25.
refers is remembered as U.S. troops marching all the way to the center of Mexico City and extracting as tribute 890,000 square miles that became Arizona, California, New Mexico, and Texas (see Exhibit 3.1). A prominent monument at the entrance of Chapultepec Park recognizes Los Niños Heroes (the boy heroes), who resisted U.S. troops, wrapped themselves in Mexican ags, and jumped to their deaths rather than surrender. Mexicans recount the heroism of Los Niños Heroes and the loss of Mexican territory to the United States every September 13, when the president of Mexico, the cabinet, and the diplomatic corps assemble at the Mexico City fortress to recall the defeat that led to the “despojo territorial” (territorial plunder).

The Mexican Revolution, which overthrew the dictator Díaz and launched the modern Mexican state, is particularly remembered for the expulsion of foreigners—most notably North American businessmen who were the most visible of the wealthy and influential entrepreneurs in Mexico.

*When the United Nations recommended that all countries set aside a single day each year to honor children, Mexico designated April 30 as “Dia de Los Niños.” Interestingly, this holiday often coincides with Saint Patrick’s Day celebrations, which include recognition of the San Patricios, the Irish-American battalion that fought with the Mexicans in the Mexican–American War. See Carol Sowers, “El Dia de Los Niños Adds International Touch to Celebration,” *Arizona Republic*, April 29, 2005.*
**Exhibit 3.1**

**Territorial Expansion of United States from 1783**

The United States expanded westward to the Pacific through a series of financial deals, negotiated settlements, and forcible annexations. The acquisition of territory from Mexico began with the Battle of San Jacinto in 1836, when Texas staged a successful revolt against the rule of Mexico and became The Republic of Texas—later to join the Union in 1845. The Mexican War (1846–1848) resulted in Mexico ceding California and a large part of the West to the United States.

---

**Manifest Destiny** and the Monroe Doctrine were accepted as the basis for U.S. foreign policy during much of the 19th and 20th centuries. Manifest Destiny, in its broadest interpretation, meant that Americans were a chosen people ordained by God to create a model society. More specically, it referred to the territorial expansion of the United States from the Atlantic to the Paciﬁc. The idea of Manifest Destiny was used to justify the U.S. annexation of Texas, Oregon, New Mexico, and California and, later, U.S. involvement in Cuba, Alaska, Hawaii, and the Philippines. Exhibit 3.1 illustrates when and by what means the present United States was acquired.

The **Monroe Doctrine**, a cornerstone of early U.S. foreign policy, was enunciated by President James Monroe in a public statement proclaiming three basic dicta: no further European colonization in the New World, abstention of the United States from European

**1640** English Civil War begins, ends with Restoration of Charles II in 1660

---

political affairs, and nonintervention by European governments in the governments of the Western Hemisphere.

After 1870, interpretation of the Monroe Doctrine became increasingly broad. In 1881, its principles were evoked in discussing the development of a canal across the Isthmus of Panama. Theodore Roosevelt applied the Monroe Doctrine with an extension that became known as the Roosevelt Corollary. The corollary stated that not only would the United States prohibit non-American intervention in Latin American affairs, but it would also police the area and guarantee that Latin American nations met their international obligations. The corollary sanctioning American intervention was applied in 1905 when Roosevelt forced the Dominican Republic to accept the appointment of an American economic adviser, who quickly became the nancial director of the small state. It was also used in the acquisition of the Panama Canal Zone from Colombia in 1903 and the formation of a provisional government in Cuba in 1906.

The manner in which the United States acquired the land for the Panama Canal Zone typi es the Roosevelt Corollary—whatever is good for the United States is justi able. As the Global Perspective at the beginning of this chapter illustrates, the creation of the country of Panama was a total fabrication of the United States.8

According to U.S. history, these Latin American adventures were a justi able part of our foreign policy; to Latin Americans, they were unwelcome intrusions in Latin American af-

fairs. This perspective has been constantly reinforced by U.S. intervention in Latin America since 1945 (see Exhibit 3.2). The way historical events are recorded and interpreted in one culture can differ substantially from the way those same events are recorded and interpreted in another. From the U.S. view, each of the interventions illustrated in Exhibit 3.2 was justi ed. A comparison of histories goes a long way in explaining the differences in outlooks and behavior of people on both sides of the border. Many Mexicans believe that their “good neighbor” to the north is not reluctant to throw its weight around when it wants something. Suspicions that self-interest is the primary motivation for good relations with Mexico abound.9

History viewed from a Latin American perspective explains how a national leader, under adverse economic conditions, can point a nger at the United States or a U.S. multinational corporation and evoke a special emotional, popular reaction to divert attention away from the government in power. As a case in point, after the U.S. House of Representatives voted to censure Mexico for drug corruption, President Ernesto Zedillo came under pressure to

---

4For an interesting discussion of how past U.S. foreign interventions affect attitudes about U.S. involvement in Iraq, see “Anti-Americanism: The View from Abroad,” The Economist, February 17, 2005.

5Many Latin Americans’ elation with the Bush administration’s rst-term pronouncements that the United States was looking south “not as an afterthought but as a fundamental commitment”—that a region “too often separated by history or rivalry and resentment” should prepare itself for the start of a “new era” of cooperation—soon became disappointment as the war on terror turned U.S. attention away from Latin America. Marcela Sanchez, “Bush, Looking Every Which Way but South,” Washington Post, January 6, 2005.
take a hard stand with Washington. He used the anniversary of Mexico’s 1938 expropriation of the oil industry from foreign companies to launch a strong nationalist attack. He praised the state oil monopoly Pemex as a “symbol of our historical struggles for sovereignty.” Union members cheered him on, waving a huge banner that read: “In 1938 Mexico was ‘decertified’ because it expropriated its oil and it won—today we were decertified for defending our dignity and sovereignty.” Apparently Venezuelan President Hugo Chavez was listening, based on his more recent nationalization of foreign oil company assets in the Orinoco River Basin11 and his recent renaming of the country the Bolivarian Republic of Venezuela.11

Adapting to the local culture is an important aspect of strategy for many products. Understanding a country’s history helps achieve that goal. Microsoft has nine different editions reflecting local “history” to be sure that its Encarta multimedia encyclopedia on CD-ROM does not contain cultural blunders. As a consequence, it often reflects different and sometimes contradictory understandings of the same historical events. For example, who invented the telephone? In the U.S., U.K., and German editions, it is Alexander Graham Bell, but ask the question in the Italian edition, and your answer is Antonio Meucci, an Italian-American candle maker whom Italians believe beat Bell by five years. For electric light bulbs, it is Thomas Alva Edison in the United States, but in the United Kingdom, it is the British inventor Joseph Swan. Other historical events reflect local perceptions. The nationalization of the Suez Canal, for example, in the U.S. edition is a decisive intervention by superpowers. In the French and U.K. editions, it is summed up as a “humiliating reversal” for Britain and France—a phrase that does not appear in the U.S. edition.

Although Microsoft is on the mark by adapting these events to their local historical context, it has, on occasion, missed the boat on geography. South Korean ire was raised when the South Korean island of Ullung-do was placed within Japan’s borders and when the Chon-Ji Lake, where the first Korean is said to have descended from heaven, was located in China. And finally, an embarrassed Microsoft apologized to the people of Thailand for referring to Bangkok as a commercial sex center, assuring the women’s activists group that protested that the revised version would “include all the great content that best reflects its rich culture and history.”

Microsoft also bows to political pressure. The government of Turkey stopped distribution of an Encarta edition with the name Kurdistan used to denote a region of southeastern Turkey on a map. Hence Microsoft removed the name Kurdistan from the map. Governments frequently lobby the company to show their preferred boundaries on maps. When the border between Chile and Argentina in the southern Andes was in dispute, both countries lobbied for their preferred boundary, and the solution both countries agreed to was—no line.

But our fun stories about changes to Encarta must come to an end, because the online encyclopedia has itself become a topic of history. Microsoft folded the entire Encarta operation without explanation in 2009; most analysts agree Wikipedia simply did it in.

These leaders might be cheered for expropriation or conscription of foreign investments, even though the investments were making important contributions to their economies. To understand a country’s attitudes, prejudices, and fears, it is necessary to look beyond the surface of current events to the inner subtleties of the country’s entire past for clues. Three comments by Mexicans best summarize this section:

History is taught one way in Mexico and another way in the United States—the United States robbed us but we are portrayed in U.S. textbooks as bandits who invaded Texas. We may not like gringos for historical reasons, but today the world is dividing into commercial blocks, and we are handcuffed to each other for better or worse. We always have been and we continue to be a colony of the United States.
Geography and Global Markets

Geography, the study of Earth’s surface, climate, continents, countries, peoples, industries, and resources, is an element of the uncontrollable environment that confronts every marketer but that receives scant attention. The tendency is to study the aspects of geography as isolated entities rather than as important causal agents of the marketing environment. Geography is much more than memorizing countries, capitals, and rivers. It also includes an understanding of how a society’s culture and economy are affected as a nation strives to supply its people’s needs within the limits imposed by its physical makeup. Thus, the study of geography is important in the evaluation of markets and their environment.

This section discusses the important geographic characteristics a marketer needs to consider when assessing the environmental aspects of marketing. Examining the world as a whole provides the reader with a broad view of world markets and an awareness of the effects of geographic diversity on the economic profiles of various nations. Climate and topography are examined as facets of the broader and more important elements of geography. A brief look at Earth’s resources and population—the building blocks of world markets—completes the presentation on geography and global markets.

Altitude, humidity, and temperature extremes are climatic features that affect the uses and functions of products and equipment. Products that perform well in temperate zones may deteriorate rapidly or require special cooling or lubrication to function adequately in tropical zones. Manufacturers have found that construction equipment used in the United States requires extensive modifications to cope with the intense heat and dust of the Sahara Desert. A Taiwanese company sent a shipment of drinking glasses to a buyer in the Middle East. The glasses were packed in wooden crates with hay used as dunnage to prevent breakage. The glasses arrived in shards. Why? When the crates moved to the warmer, less humid climate of the Middle East, the moisture content of the hay dropped significantly and shriveled to a point that it offered no protection.

Within even a single national market, climate can be sufficiently diverse to require major adjustments. In Ghana, a product adaptable to the entire market must operate effectively in extreme desert heat and low humidity and in tropical rainforests with consistently high humidity. Bosch-Siemens washing machines designed for European countries require spin cycles to range from a minimum spin cycle of 500 rpm to a maximum of 1,600 rpm: Because the sun does not shine regularly in Germany or in Scandinavia, washing machines must have a 1,600 rpm spin cycle because users do not have the luxury of hanging them out to dry. In Italy and Spain, however, clothes can be damp, because the abundant sunshine is sufficient to justify a spin cycle speed of 500 rpm.

Different seasons between the northern and southern hemispheres also affect global strategies. JCPenney had planned to open stores in Chile as part of its expansion into countries below the equator. It wanted to capitalize on its vast bulk buying might for its strategies. JCPenney had planned to open five stores in Chile as part of its expansion into South America. After opening its first store in Chile, the company realized that the plan was

12 The importance of geography in understanding global challenges that exist today is discussed in Harm J. DeBlij, Why Geography Matters (New York: Oxford University Press, 2005).
1810 Following Napoleon’s invasion of Spain and Portugal, Simón Bolívar begins wars of independence for Spanish colonies in Latin America, leading to new governments in Bolivia, Columbia, Ecuador, Peru, and Venezuela.

1814 First practical steam locomotive is built by George Stephenson in England, leading to the birth of railroad transportation.

1823 U.S. President James Monroe promulgates the doctrine bearing his name that declares the Americas closed to colonization in an attempt to assert U.S. influence over the region.

1837 Reign of Britain’s Queen Victoria begins; she oversees the growth of the British Empire and Britain’s emergence as an industrial power (she dies in 1901).

1837 Electronic telegraph begins wide commercial use, transmitting information, including production orders, swiftly and efficiently.

1840 Britain begins wide commercial use of steam locomotives, revolutionizing road travel.

1850s Britain’s emergence as an industrial power is reinforced by the rapid expansion of its rail system.

1860 Following Napoleon’s defeat at Waterloo and giving up the throne days later, Victoria begins; she oversees the growth of the British Empire and Britain’s emergence as an industrial power (she dies in 1901).

1870s Britain’s rail system is the envy of the world, with thousands of miles of track connecting cities and towns.

1880s The world is becoming a smaller place, thanks to the invention of the telephone and the telegraph.

1900s The world is truly becoming a global village, with the advent of the automobile and the airplane.

Innovation and the Water Shortage, from Fog to Kid Power

When you live in Chungungo, Chile, one of the country’s most arid regions with no nearby source of water, you drink fog. Of course! Thanks to a legend and resourceful Canadian and Chilean scientists, Chungungo now has its own supply of drinkable water after a 20-year drought. Before this new source of water, Chungungo depended on water trucks that came twice a week.

Chungungo has always been an arid area, and legend has it that the region’s original inhabitants used to worship trees. They considered them sacred because a permanent flow of water sprang from the treetops, producing a constant interior rain. The legend was right—the trees produced rain! Thick fog forms along the coast. As it moves inland and is forced to rise against the hills, it changes into tiny raindrops, which are in turn retained by the tree leaves, producing the constant source of rain. Scientists set out to take advantage of this natural phenomenon.

The nearby ancient eucalyptus forest of El Tofo Hill provided the clue that scientists needed to create an ingenious water-supply system. To duplicate the water-bearing effect of the trees, they installed 86 “fog catchers” on the top of the hill—huge nets supported by 12-foot eucalyptus pillars, with water containers at their base. About 1,900 gallons of water are collected each day and then piped into town. This small-scale system is cheap (about one-fifth as expensive as having water trucked in), clean, and provides the local people with a steady supply of drinking water.

In sub-Saharan Africa, inventive folks have come up with a new way to bring water up from wells. A life-changing and life-saving invention—the PlayPump water system—provides easy access to clean drinking water, brings joy to children, and leads to improvements in health, education, gender equality, and economic development in more than 1,000 rural villages in South Africa, Swaziland, Mozambique, and Zambia. The PlayPump systems are innovative, sustainable, patented water pumps powered by children at play. Installed near schools, the PlayPump system doubles as a water pump and a merry-go-round. The PlayPump system also provides one of the only ways to reach rural and peri-urban communities with potentially life-saving public health messages. Please see the accompanying pictures of a new solution to one of humankind’s oldest problems.

While children have fun spinning on the PlayPump merry-go-round, (1) clean water is pumped (2) from underground (3) into a 2,500-liter tank, (4) standing seven meters above the ground. A simple tap (5) makes it easy for adults and children to draw water. Excess water is diverted from the storage tank back down into the base hole (6). The water storage tank (7) provides rare opportunities to advertise to outlying communities. All four sides of the tank are leased as billboards, with two sides for consumer advertising and the other two sides for health and educational messages. The revenue generated from this unique model pays for pump maintenance. Capable of producing up to 1,400 liters of water per hour at 16 rpm from a depth of 40 meters, it is effective up to a depth of 100 meters. See http://www.playpumps.org. (right: © Frimmel Smith/PlayPump)

communication and distribution in China, Russia, India, and Canada as well. As countries seek economic opportunities and the challenges of the global marketplace, they invest in infrastructure to overcome such barriers. Once seen as natural protection from potentially hostile neighbors, physical barriers that exist within Europe are now seen as impediments to efficient trade in an integrated economic union.

For decades the British resisted a tunnel under the English Channel—they did not trust the French or any other European country and saw the channel as protection. But when they became members of the European Union, economic reality meant the channel tunnel had to be built to facilitate trade with other EU members. Now you can take a bullet train through the Chunnel, but even a decade after it opened, its finances are still a bit shaky, and recently, undocumented workers have tried to walk the underwater route to reach England.15

This advertisement provides the only time we have seen a human vomiting to market a product. The product advertised treats altitude sickness. The billboard appears in the Lima, Peru, airport, targeting tourists traveling from sea level to Cuzco and Machu Picchu (pictured in the scenic background). Cuzco, the old Inca capital, rises more than 11,000 feet in altitude, and many foreign tourists visiting there suffer this particular sort of tourista.

From the days of Hannibal, the Alps have served as an important physical barrier and provided European countries protection from one another. But with the EU expansion, the Alps became a major impediment to trade. Truck traffic between southern Germany and northern Italy, which choked highways through some of Switzerland’s most treacherous mountain roads and pristine nature areas, was not only burdensome for all travelers but becoming economically unacceptable. The solution, the 21-mile Loetschberg Tunnel, which opened in 2007, burrows under the Alps and trims the time trains need to cross between Germany and Italy from a three-and-a-half-hour trip to less than two hours. By 2014, the 36-mile Gotthard Tunnel will provide additional rail coverage for the area and be the world’s longest rail tunnel.

Always on the slim margin between subsistence and disaster, less-privileged countries suffer disproportionately from natural and human-assisted catastrophes. The Haitian earthquake disaster of 2010 is perhaps the prominent example. Climate and topography coupled with civil wars, poor environmental policies, and natural disasters push these countries further into economic stagnation. Without irrigation and water management, droughts, floods, and soil erosion affect them, often leading to creeping deserts that reduce the long-term fertility of the land. Population increases, deforestation, and overgrazing intensify the impact of

---

17 See Map 2, “Global Climate,” in the World Maps section for a view of the diversity of the world’s climate. The climatic phenomenon of El Niño wreaks havoc with weather patterns and is linked to crop failures, famine, forest fires, dust and sand storms, and other disasters associated with either an overabundance or a lack of rain.

Chapter 3 History and Geography: The Foundations of Culture

... to solve their problems. Cyclones cannot be prevented, nor can inadequate rainfall, but means to control their effects are available. Unfortunately, each disaster seems to push developing countries further away from effective solutions. Countries that suffer the most from major calamities are among the poorest in the world.19 Many have neither the capital nor the technical ability to minimize the effects of natural phenomena; they are at the mercy of nature.

As countries prosper, natural barriers are overcome. Tunnels and canals are dug and bridges and dams are built in an effort to control or to adapt to climate, topography, and the recurring extremes of nature. Humankind has been reasonably successful in overcoming or minimizing the effects of geographical barriers and natural disasters, but as they do so, they must contend with problems of their own making. The construction of dams is a good example of how an attempt to harness nature for good has a bad side. Developing countries consider dams a cost-effective solution to a host of problems. Dams create electricity, help control floods, provide water for irrigation during dry periods, and can be a rich source of sh. However, there are side effects; dams displace people (the Three Gorges Dam in China will displace 1.3 million people20) while attracting tourists20), and silt that ultimately clogs the reservoir is no longer carried downstream to replenish the soil and add nutrients. Similarly, the Narmada Valley Dam Project in India will provide electricity, flood control, and irrigation, but it has already displaced tens of thousands of people, and as the benefits are measured against social and environmental costs, questions of its efficacy are being raised. In short, the need for gigantic projects such as these must be measured against their social and environmental costs.

As the global rush toward industrialization and economic growth accelerates, environmental issues become more apparent. Disruption of ecosystems, relocation of people, inadequate hazardous waste management, and industrial pollution are problems that must be addressed by the industrialized world and those seeking economic development.21 The problems are mostly byproducts of processes that have contributed significantly to economic development and improved lifestyles. During the last part of the 20th century, governments and industry expended considerable effort to develop better ways to control nature and to allow industry to grow while protecting the environment.22

Nations, companies, and people reached a consensus during the close of the last decade: Environmental protection is not an optional extra; it is an essential part of the complex process of doing business. Many view the problem as a global issue rather than a national issue and as one that poses common threats to humankind and thus cannot be addressed by nations in isolation. Of special concern to governments and businesses are ways to stem the tide of pollution and to clean up decades of neglect.

Companies looking to build manufacturing plants in countries with more liberal pollution regulations than they have at home are finding that regulations everywhere have gotten stricter. Many governments are drafting new regulations and enforcing existing ones. Electronic products contain numerous toxic substances that create a major disposal problem in landfills where inadequate disposal allows toxins to seep into groundwater. The European Union, as well as other countries, has laws stipulating the amount and types of potentially toxic substances it will require a company to take back to recycle. A strong motivator is the realization that pollution is on the verge of getting completely out of control.

China is now the world’s top polluter in almost all respects. By 2020 its greenhouse-gas emissions will be more than double the closest rival, the United States. An examination of rivers, lakes, and reservoirs in China revealed that toxic substances polluted 21 percent and that 16 percent of the rivers were seriously polluted with excrement. China has 16 of the world’s 20 most polluted cities. The very process of controlling industrial wastes leads to another and perhaps equally critical issue: the disposal of hazardous waste, a byproduct of pollution controls. Estimates of hazardous wastes collected annually exceed 300 million tons; the critical issue is disposal that does not simply move the problem elsewhere.

difficulty in the disposal of wastes at home are seeking countries willing to assume the burden of disposal. Waste disposal is legal in some developing countries as governments seek the revenues that are generated by offering sites for waste disposal. In other cases, illegal dumping is done clandestinely. A treaty among members of the Basel Convention that required prior approval before dumping could occur was later revised to a total ban on the export of hazardous wastes by developed nations. The influence and leadership provided by this treaty are reflected in a broad awareness of pollution problems by businesses and people in general. 25

Governments, organizations, and businesses are becoming increasingly concerned with the social responsibility and ethical issues surrounding the problem of maintaining economic growth while protecting the environment for future generations. However, the commitment made by governments and companies varies dramatically around the world. For example, with one of the highest pollution rates on a per capita basis, the United States lags behind almost all major competitors in agreeing to greenhouse emission standards (see Exhibit 3.3). 26 The Organization for Economic Cooperation and Development, the United Nations, the European Union, and international activist groups are undertaking programs to strengthen environmental policies. 27 In many ways China, because it has the most urgent and greatest pollution problems, is leading the charge in new green technology. 28

Here in São Paulo, Shell sells two kinds of fuel: alcohol made primarily from sugarcane and gasoline made from dirtier fossil fuels. Flexible-fuel engines in Brazilian cars can burn either kind of fuel or any mixture of the two. Although the price per liter is quite different, so is the mileage per liter. Brazilians make their choice of fuel based on the kind of driving they anticipate, city versus highway.

multinational companies such as Petrobras, Walmart, and Nike are not only cleaning up their own operations around the world but also pushing their suppliers to do the same.

The issue that concerns everyone is whether economic development and protection for the environment can coexist. **Sustainable development** is a joint approach among those (e.g., governments, businesses, environmentalists, and others) who seek economic growth with “wise resource management, equitable distribution of benefits and reduction of negative effects on people and the environment from the process of economic growth.” Sustainable development is not about the environment or the economy or society. It is about striking a lasting balance between all of these. More and more companies are embracing the idea of sustainable development as a “win–win” opportunity. Responsibility for protecting the environment does not rest solely with governments, businesses, or activist groups; however, each citizen has a social and moral responsibility to include environmental protection among his or her highest goals. This idea is particularly a problem in the United States, where consumers are often more interested in style than in sustainability, public opinion polls favor growth over the environment, and

A huge offshore discovery has the potential to make Brazil a new major petroleum exporter through its national oil company, Petrobras.  

high school students receive relatively little environmental education. A recent study has also shown that governments with pluralistic constituencies may have relatively more trouble persuading important minority groups to agree to their environmental efforts.  

**Resources**

The availability of minerals and the ability to generate energy are the foundations of modern technology. The locations of Earth’s resources, as well as the available sources of energy, are geographic accidents. The world’s nations are not equally endowed, and no nation’s demand for a particular mineral or energy source necessarily coincides with domestic supply.

In much of the underdeveloped world, human labor provides the preponderance of energy. The principal supplements to human energy are animals, wood, fossil fuel, nuclear power, and, to a lesser and more experimental extent, the ocean’s tides, geothermal power, and the sun. Of all the energy sources, oil and gas contribute over 60 percent of world energy consumption. Because of petroleum’s versatility and the ease with which it is stored and transported, petroleum-related products continue to dominate energy usage. (See Exhibit 3.4.)

---

39 Visit [http://www.eia.doe.gov](http://www.eia.doe.gov) and search for “International Energy Outlook (most current year)” for details of production, use, and so forth.
40 See Map 3, “Oil and Gas Production and Consumption,” for a global view of the flow and uses of petroleum.
Exhibit 3.4
World Energy Consumption

Energy consumed by world regions, measured in quadrillion BTUs in 2001. Total world consumption was 381.8 quadrillion BTUs. The largest portion of the hydro/other category is hydroelectrical energy. Fuels such as wood, peat, animal waste, wind, solar, and geothermal account for less than 1.0 quadrillion BTUs in the other portion of the hydro/other category.

Many countries that were self-sufficient during much of their early economic growth have become net importers of petroleum during the past several decades and continue to become increasingly dependent on foreign sources. A spectacular example is the United States, which was almost completely self-sufficient until 1942, became a major importer by 1950, and between 1973 and 2000 increased its dependency from 36 percent to over 66 percent of its annual requirements. If present rates of consumption continue, predictions are that by the mid-2000s the United States will be importing more than 70 percent of its requirements.
of its needs, that is, more than 17 million barrels of oil each day. Exhibit 3.4 compares North American domestic energy consumption with other world regions. It is interesting to note that though North America is currently a major consumer of energy, industrializing Asia and the three industrialized areas (as shown in Exhibit 3.4) do not lag far behind. In fact, China has become the world’s second-largest oil importer after the United States, and demand continues to grow rapidly.\(^{41}\)

Since World War II, arguments about the limitless availability of seemingly inexhaustible supplies of petroleum have been prominent.\(^{42}\) The dramatic increase in economic growth in the industrialized world and the push for industrialization in the remaining world have put tremendous pressure on Earth’s energy resources. Unfortunately, as countries industrialize, energy sources are not always efficiently utilized. China, for example, spends three times the world average on energy (all sources) to produce one dollar of gross national product (GNP). In comparison with Japan, possibly the world’s most efficient user of energy, where less than 5 ounces of oil is needed to generate $1 in GNP, in China, approximately 80 ounces of oil is needed.\(^{43}\) The reasons for China’s inefficient oil use are numerous, but the worst culprit is outdated technology.\(^{44}\)

The growth of market-driven economies and an increasing reliance on petroleum supplies from areas of political instability—the Middle East, the former Soviet Union, and Latin America—create a global interdependence of energy resources. The net result is a profound impact on oil prices and on the economies of industrialized and industrializing countries.

\(^{41}\)Koh Chin Ling and Loretta Ng, “China’s Crude Oil Imports Surge in March,” *International Herald Tribune*, April 22, 2005.

The location, quality, and availability of resources will affect the pattern of world economic development and trade well into the 21st century. In addition to the raw materials of industrialization, an economically feasible energy supply must be available to transform resources into usable products. As the global demand for resources intensifies and prices rise, resources will continue to increase in importance among the uncontrollable elements of the international marketer’s decisions.

**Dynamics of Global Population Trends**

Current population, rural/urban population shifts, rates of growth, age levels, and population control help determine today’s demand for various categories of goods. Although not the only determinant, the existence of sheer numbers of people is significant in appraising potential consumer markets. Changes in the composition and distribution of population among the world’s countries will profoundly affect future demand. Moreover, it now appears that demand for goods worldwide can affect migration patterns as well, in a reversal of the traditional causal relationship. Specifically, the global financial crisis that began in 2008 appears to have caused a (perhaps temporary) reversal of migrations from urban to rural areas within countries and from developed back to developing countries internationally as employment opportunities dry up in response to the decline in demand for goods and services worldwide.

Recent estimates place world population at more than 6.8 billion people, a number expected to grow to about 8 billion by 2050. However, seemingly small differences in assumptions about fertility rates can make big differences in growth forecasts. One possible scenario put forth by United Nations experts suggests the planet’s population may peak at about 8 billion and then begin to decline after 2040. All scenarios agree though that almost all of the projected growth up to 2050 will occur in less developed regions. Exhibit 3.5 shows that 85 percent of the population will be concentrated in less developed regions by 2050. The International Labor Organization estimates that 1.2 billion

*Lowest estimate among three provided.

*More developed regions comprise all regions of Europe and Northern America, Australia, New Zealand, and Japan.

*Less developed regions comprise all regions of Africa, Asia (excluding Japan), and Latin America and the regions of Melanesia, Micronesia, and Polynesia.

*Least developed regions, as defined by the United Nations General Assembly, include 48 countries, of which 33 are in Africa, 9 in Asia, 1 in Latin America, and 5 in Oceania. They are also included in the less developed regions.
jobs must be created worldwide to accommodate these new entrants through 2025. Furthermore, most of the new jobs will need to be created in urban areas where most of the population will reside.

Faced with the ominous consequences of the population explosion, it would seem logical for countries to take steps to reduce growth to manageable rates, but procreation is one of the most culturally sensitive uncontrollable factors. Economics, self-esteem, religion, politics, and education all play critical roles in attitudes about family size. All these considerations make the impact of China’s long-term enforcement of its one-child policies most remarkable.48

The prerequisites to population control are adequate incomes, higher literacy levels, education for women, universal access to healthcare, family planning, improved nutrition, and, perhaps most important, a change in basic cultural beliefs regarding the importance of large families. Unfortunately, minimum progress in providing improved living conditions and changing beliefs has occurred. India serves as a good example of what is happening in much of the world. India’s population was once stable, but with improved health conditions leading to greater longevity and lower infant mortality, its population will exceed that of China by 2050, when the two will account for about 50 percent of the world’s inhabitants.49 The government’s attempts to institute change are hampered by a variety of factors, including political ineptitude50 and slow changes in cultural norms. Nevertheless, the government continues to pass laws with the intended purpose of limiting the number of births. A novel example was a law that bars those with more than two children from election to the national Parliament and state assemblies. This rule would mean that many now in office could not seek reelection because of their family size.51

Perhaps the most important deterrent to population control is cultural attitudes about the importance of large families. In many cultures, the prestige of a man, whether alive or dead, depends on the number of his progeny, and a family’s only wealth is its children. Such feelings are strong. Prime Minister Indira Gandhi found out how strong when she attempted mass sterilization of men, which reportedly was the main cause of her defeat in a subsequent election. Additionally, many religions discourage or ban family planning and thus serve as a deterrent to control. Nigeria has a strong Muslim tradition in the north and a strong Roman Catholic tradition in the east, and both faiths favor large families. Most traditional religions in Africa encourage large families; in fact, the principal deity for many is the goddess of land and fertility.

Family planning and all that it entails is by far the most universal means governments use to control birthrates, but some economists believe that a decline in the fertility rate is a function of economic prosperity and will come only with economic development. Ample anecdotal evidence suggests that fertility rates decline as economies prosper. For example, before Spain’s economy began its rapid growth in the 1980s, families had six or more children; now, Spain has one of the lowest birthrates in Europe, an average of 1.24 children per woman. Similar patterns have followed in other European countries as economies have prospered.

Migration from rural to urban areas is largely a result of a desire for greater access to sources of education, healthcare, and improved job opportunities.52 In the early 1800s, less than 3.5 percent of the world’s people were living in cities of 20,000 or more and less than

49 “India to Surpass China in Population,” ExpressIndia, May 18, 2005.
2 percent in cities of 100,000 or more; today, more than 40 percent of the world’s people are urbanites, and the trend is accelerating. Once in the city, perhaps three out of four migrants achieve some economic gains. The family income of a manual worker in urban Brazil, for example, is almost five times that of a farm laborer in a rural area.

By 2030, estimates indicate that more than 61 percent of the world’s population will live in urban areas (up from 49 percent in 2005, with similar changes across all regions), and at least 27 cities will have populations of 10 million or more, 23 of which will be in the less developed regions. Tokyo has already overtaken Mexico City as the largest city on Earth, with a population of 26 million, a jump of almost 8 million since 1990.

Although migrants experience some relative improvement in their living standards, intense urban growth without investment in services eventually leads to serious problems. Slums populated with unskilled workers living hand to mouth put excessive pressure on sanitation systems, water supplies, and social services. At some point, the disadvantages of unregulated urban growth begin to outweigh the advantages for all concerned.

Consider the conditions that exist in Mexico City today. Besides smog, garbage, and pollution brought about by its increased population, Mexico City faces a severe water shortage. Local water supplies are nearly exhausted and in some cases are unhealthy. Water consumption from all sources is about 16,000 gallons per second, but the underground aquifers are producing only 2,640 gallons per second. Water comes from hundreds of miles away and has to be pumped up to an elevation of 7,444 feet to reach Mexico City. Such problems are not unique to Mexico; throughout the developing world, poor sanitation and inadequate water supplies are consequences of runaway population growth. An estimated 1.1 billion people are currently without access to clean drinking water, and 2.8 billion lack access to sanitation services. Estimates are that 40 percent of the world’s population, 2.5 billion people, will be without clean water if more is not invested in water resources. Prospects for improvement are not encouraging, because most of the world’s urban growth will take place in the already economically strained developing countries.

While the developing world faces a rapidly growing population, the industrialized world’s population is in decline and rapidly aging. Birthrates in western Europe and Japan have been decreasing since the early or mid-1960s; more women are choosing careers instead of children, and many working couples are electing to remain childless. As a result of these and other contemporary factors, population growth in many countries has dropped below the rate necessary to maintain present levels. Just to keep the population from falling, a nation needs a fertility rate of about 2.1 children per woman. Not one major country has sufficient internal population growth to maintain itself, and this trend is expected to continue for the next 50 years.

At the same time that population growth is declining in the industrialized world, there are more aging people today than ever before. Global life expectancy has grown more in the past 50 years than over the previous 5,000 years. Until the Industrial Revolution, no more than 2 or 3 percent of the total population was over the age of 65 years. Today in the developed world, the over-age-65 group amounts to 14 percent, and by 2030, this group will reach 25 percent in some 30 different countries. Furthermore, the number of “old old”...

will grow much faster than the “young old.” The United Nations projects that by 2050, the number of people aged 65 to 84 years worldwide will grow from 400 million to 1.3 billion (a threefold increase), while the number of people aged 85 years and over will grow from 26 million to 175 million (a sixfold increase)—and the number aged 100 years and over will increase from 135,000 to 2.2 million (a sixteenfold increase). Exhibit 3.6 illustrates the disparity in aging that is typical among less developed countries (Kenya), developing countries (Brazil), and an economically developed country (United Kingdom). Countries like Kenya, with a high proportion of young people, face high education and healthcare costs, whereas countries like the United Kingdom, with top-heavy population pyramids, face high pension and healthcare costs for the elderly with fewer wage earners to bear the burden.

Europe, Japan, and The United States epitomize the problems caused by an increasing percentage of elderly people who must be supported by a declining number of skilled workers. In 1998, Japan crossed a threshold anticipated with fear by the rest of the developed world: The point at which retirees withdrawing funds from the pension system exceeded the workers contributing to it. The elderly require higher government outlays for healthcare and hospitals, special housing and nursing homes, and pension and welfare assistance, but the workforce that supports these costs is dwindling. The part of the world with the largest portion of people over 65 years is also the part of the world with the

Part 2  The Cultural Environment of Global Markets

Worker Shortage and Immigration

Three converging issues in China have the potential of causing a serious gender imbalance:

- China, the world’s most populous country, has a strict one-child policy to curb population growth.
- Traditional values dictate male superiority and a definite parental preference for boys.
- Prenatal scanning allows women to discover the sex of their fetuses and thereby abort unwanted female fetuses.

The first wave of children born under the one-child policy is reaching marriageable age, and there are far too few brides to go around. The ratio of males to females is unnaturally high, hovering around 118 boys for every 100 girls in 2005. Thus, men in their 20s have to deal with the harsh reality of six bachelors for every five potential brides. So what is a desperate bachelor to do? The shortage has prompted some parents to acquire babies as future brides for their sons. Infants are considered more appealing because they are less likely to run away, will look on their buyers as their own parents, and are cheaper than buying a teenage bride. Buying a baby girl can cost as little as $100 and won’t result in the fines imposed on couples who violate birth control limits. Such fines can equal as much as six years’ income.

Where Have All the Women Gone?

Another alternative is to marry a relative. At age 20 years, with his friends already paired off, Liu found himself the odd man out. His parents, farmers in a small backwater village, couldn’t raise the $2,000 required to attract a bride for their son. Desperate, Liu’s mother asked her sister for a favor: Could she ask Hai, her daughter, to be Liu’s bride? Young women like Hai are not likely to defy their parents. And so Liu and Hai were wed.

Chinese officials are starting to worry about the imbalance and have announced a raft of new programs to reverse the trend. These offers include cash payments for couples who have a daughter and let her live, along with privileges in housing, employment, and job training. Some families with girls will also be exempt from paying school fees. Even though the government staunchly defends its one-child policy, it is experimenting with allowing couples whose first-born is a girl to have a second child. In the meantime and until the new policy results in more girls, today’s 20-year-old men will just have to compete if they want a wife.

Worker Shortage and Immigration

For most countries, mass immigration is not well received by the resident population. However, a recent report from the United Nations makes the strongest argument for change in immigration laws as a viable solution. The free flow of immigration will help ameliorate the dual problems of explosive population expansion in less developed countries and worker shortage in industrialized regions. Europe is the region of the world most affected by aging and thus by a steadily decreasing worker-to-retiree ratio. The proportion of older persons will increase from 20 percent in 1998 to 35 percent in 2050. The country with the largest share of old people will be Spain, closely followed by Italy. Recognizing the problem, Spain has changed immigration laws to open its borders to all South Americans of Spanish descent. To keep the worker-to-retiree ratio from falling, Europe will need 1.4 billion immigrants over the next 50 years, while Japan and the

\[63\] “Spain Grants Amnesty to 700,000 Migrants,” Guardian Unlimited, May 9, 2005.
As pension systems, healthcare systems, and retirement plans continue to crumble under the weight of Baby Boom numbers, we all will need to rely more on the strength of family ties and remember the fundamental human characteristic of interdependence. The problem is that such remembrance is particularly hard for Americans, as opposed to all other peoples on the planet.

America started with The Declaration of Independence. On July 4, 1776, the founding fathers broke from the tyranny of England to form a new country. That document and the idea of independence represent the essence of being American and literally the most celebrated notion of the nation. Indeed, the goal of mainstream American parenting is to inculcate this notion into the thinking of children: We ensure they make their own beds, make their own lunches, wash their own clothes, do their own homework, drive their own cars, and so forth. How else can they become independent adults?

There are at least three problems with this American obsession with independence. First, it stigmatizes the burgeoning numbers of both boomerang kids and grandparents living with their grandchildren as families across America smartly reunite. According to the most recent U.S. Census figures, there are 22 million adult children living with their parents and 6 million grandparents living in three-generation households, and both numbers are growing fast. Second, teaching independence actually hasn’t worked anyway, as we will see next. And third, there is really no such thing as independence anyway. There is only interdependence.

This American overemphasis on independence is now being recognized by the most independent-minded of all Americans, CEOs. In Bill George’s wonderful book, Authentic Leadership, he argues that the job of chief executive depends on six constituencies. Without surprise, the former CEO of Medtronic lists shareholders, employees, customers, vendors, and the larger community. But what is unique, and perhaps even revolutionary, in his list is his own family. He recognizes that his own success as a CEO in part depended of the quality of his family life. Thus, he organized his executive team and responsibilities such that he had time to attend kids’s soccer matches and such. Remarkable!

United States will need 600 million immigrants between now and 2050. Immigration will not help ameliorate the problem though if political and cultural opposition to immigration cannot be overcome.

The trends of increasing population in the developing world, with substantial shifts from rural to urban areas, declining birthrates in the industrialized world, and global population aging, will have profound effects on the state of world business and world economic conditions. Without successful adjustments to these trends, many countries will experience slower economic growth, serious financial problems for senior retirement programs, and further deterioration of public and social services, leading to possible social unrest.

World Trade Routes Trade routes bind the world together, minimizing distance, natural barriers, lack of resources, and the fundamental differences between peoples and economies. As long as one group of people in the world wants something that another group somewhere else has and there is a means of travel between the two, there is trade. Early trade routes were over land; later came sea routes, air routes, and, nally, some might say, the Internet to connect countries.

64 “US Tech Sector Eyes Immigration Bill Revival, Cites Worker Shortage,” Agence France-Presse, June 9, 2007.
Climate change opens up a new trade route that may compete with the Panama Canal, cutting costly days off the travel time between Western Europe and Asia. Here a German commercial vessel follows a Russian icebreaker through the proverbial Northwest Passage.

Trade routes among Europe, Asia, and the Americas were well established by the 1500s. The Spanish empire founded the city of Manila in the Philippines to receive its silver-laden galleons bound for China. On the return trip, the ship’s cargo of silk and other Chinese goods would be off loaded in Mexico, carried overland to the Atlantic, and put on Spanish ships to Spain. What we sometimes fail to recognize is that these same trade routes remain important today and that many Latin American countries have strong relationships with Europe, Asia, and the rest of the world that date back to the 1500s. The commodities traded have changed between the 1500s and today, but trade and the trade routes continue to be important. Today, instead of off loading goods in Mexico and carrying them on mule carts overland to the Atlantic, ships travel from the Pacific to the Atlantic via the Panama Canal. And ships too large for the canal off load their containers onto a railroad that crosses the Isthmus of Panama to be met by another container ship.  

Trade routes represent the attempts of countries to overcome economic and social imbalances created in part by the influence of geography. The majority of world trade is among the most industrialized and industrializing countries of Europe, North America, and Asia. It is no surprise that the trade ow, as depicted in Map 8 at the end of this chapter, links these major trading areas.

Communication Links  

An underpinning of all commerce is effective communications—knowledge of where goods and services exist and where they are needed and the ability to communicate instantaneously across vast distances. Continuous improvements in electronic communications have facilitated the expansion of trade. First came the telegraph, then the telephone, television, satellites, mobile phones, the computer, the Internet, and combinations of them all. Map 5 in the following pages illustrates the importance of fiber optic cable and satellites in providing global communications. Each revolution in technology has had a profound effect on human conditions, economic growth, and the manner in which commerce

---

functions. Each new communications technology has spawned new business models; some existing businesses have reinvented their practices to adapt to the new technology, while other businesses have failed to respond and thus ceased to exist. The Internet and mobile phone revolutions will be no different; they too affect human conditions, economic growth, and the manner in which commerce operates. As we discuss in subsequent chapters, the combination of the Internet and the dramatic increase in the mobile phone subscribers worldwide has already begun to shape how international business is managed. However, as the combinations of new technologies permeate the fabric of the world’s cultures, the biggest changes are yet to come.68

Chapter 3 History and Geography: The Foundations of Culture

One British authority admonishes foreign marketers to study the world until “the mere mention of a town, country, or river enables it to be picked out immediately on the map.” Although it may not be necessary for the student of foreign marketing to memorize the world map to that extent, a prospective international marketer should be reasonably familiar with the world, its climate, and topographic differences. Otherwise, the important marketing characteristics of geography could be completely overlooked when marketing in another country. The need for geographical and historical knowledge goes deeper than being able to locate continents and their countries. Geographic hurdles must be recognized as having a direct effect on marketing and the related activities of communications and distribution. For someone who has never been in a tropical rainforest with an annual rainfall of at least 60 inches (and sometimes more than 200 inches), anticipating the need for protection against high humidity is difficult. Likewise, someone who has never encountered the difficult problems caused by dehydration in constant 100-degrees-plus heat in the Sahara region will find them hard to comprehend. Indirect effects from the geographical conditions of a society and culture ultimately may be reflected in marketing activities. Many of the peculiarities of a country (i.e., peculiar to the foreigner) would be better understood and anticipated if its history and geography were studied more closely. Without a historical understanding of a culture, the attitudes within the marketplace may not be fully understood.

Aside from the simpler and more obvious ramifications of climate and topography, history and geography exert complex influences on the development of the general economy and society of a country. In this case, the study of history and geography is needed to provide the marketer with an understanding of why a country has developed as it has rather than as a guide for adapting marketing plans. History and geography are two of the environments of foreign marketing that should be thoroughly understood and that must be included in foreign marketing plans to a degree commensurate with their influence on marketing effort.

Summary

One British authority admonishes foreign marketers to study the world until “the mere mention of a town, country, or river enables it to be picked out immediately on the map.” Although it may not be necessary for the student of foreign marketing to memorize the world map to that extent, a prospective international marketer should be reasonably familiar with the world, its climate, and topographic differences. Otherwise, the important marketing characteristics of geography could be completely overlooked when marketing in another country. The need for geographical and historical knowledge goes deeper than being able to locate continents and their countries. Geographic hurdles must be recognized as having a direct effect on marketing and the related activities of communications and distribution. For someone who has never been in a tropical rainforest with an annual rainfall of at least 60 inches (and sometimes more than 200 inches), anticipating the need for protection against high humidity is difficult. Likewise, someone who has never encountered the difficult problems caused by dehydration in constant 100-degrees-plus heat in the Sahara region will find them hard to comprehend. Indirect effects from the geographical conditions of a society and culture ultimately may be reflected in marketing activities. Many of the peculiarities of a country (i.e., peculiar to the foreigner) would be better understood and anticipated if its history and geography were studied more closely. Without a historical understanding of a culture, the attitudes within the marketplace may not be fully understood.

Aside from the simpler and more obvious ramifications of climate and topography, history and geography exert complex influences on the development of the general economy and society of a country. In this case, the study of history and geography is needed to provide the marketer with an understanding of why a country has developed as it has rather than as a guide for adapting marketing plans. History and geography are two of the environments of foreign marketing that should be thoroughly understood and that must be included in foreign marketing plans to a degree commensurate with their influence on marketing effort.

Key Terms

Opium wars
Taiping rebellion
Confucian philosophy
Manifest destiny
Monroe doctrine
Roosevelt corollary
Expropriation
Greenhouse-gas emissions
Sustainable development

Questions

1. Define the key terms listed above.
2. Why study geography in international marketing?
3. Why study a country’s history?
4. How does an understanding of history help an international marketer?
5. Why is there a love–hate relationship between Mexico and the United States?

6. Some say the global environment is a global issue rather than a national one. What does this mean?
7. Pick a country and show how employment and topography affect marketing within the country.
8. Pick a country, other than Mexico, and show how significant historical events have affected the country’s culture.
9. Discuss the bases of world trade. Give examples illustrating the different bases.
10. The marketer “should also examine the more complex effect of geography on general market characteristics, distribution systems, and the state of the economy.” Comment.

11. The world population pattern is shifting from rural to urban areas. Discuss the marketing ramifications.

12. Select a country with a stable population and one with a rapidly growing population. Contrast the marketing implications of these two situations.

14. Discuss how your interpretations of Manifest Destiny and the Monroe Doctrine might differ from those of a native of Latin America.

15. The telegraph, the telephone, television, satellites, the computer, mobile phones, and the Internet have all had an effect on how international business operates. Discuss how each of these communications innovations affects international business management.

8 Global Economy and World Trade
El Niño
Up to 30 times in a century, the El Niño effect occurs, when east-to-west trade winds sweeping over the Pacific Ocean become unusually weak, allowing warm water, normally held back by the winds, to flow eastward along the equator. The current creates a warm band of water and an area of low atmospheric pressure with violent storms right across the eastern Pacific. The global weather machine is thrown into chaos; random and unusual weather events, such as hurricanes, heatwaves, freak floods, and droughts, occur around the globe, bringing devastation in their wake.
Winds and currents

The winds and currents that circulate across the surface of the planet act as a global heat exchange mechanism, transferring warmth from the tropics, which receive the most heat from the Sun, toward the cold polar regions. If air in one region of the globe is heated above the temperature of the surrounding air, it becomes less dense and rises. Cooler, denser air in another part of the atmosphere sinks—a constant cycle of heat exchange and air circulation, known as the prevailing winds. The surface currents of the ocean, which extend to depths of several hundred meters, are influenced by global wind patterns. The transfer of warm water polewards can have a strong influence on neighboring continents—the warm Gulf Stream in the Atlantic, for example, keeps northwestern Europe free of ice.
### 3 Oil and Gas Production and Consumption

Energy consumption oil and gas fields
Oil and natural gas account for over 60 percent of energy consumption in the United States, and slightly less than that for the remainder of the world. Oil production peaked in the United States in 1970, and is expected to peak worldwide in the next ten years. Thus, a scarcity premium in the price of oil observed in 2004 may foretell tighter supplies in the future if demand growth continues unabated. Natural gas may be more plentiful than oil, but gas is costlier to transport, other than by pipeline, so there is much less world trade of it than there is for oil. Supply estimates have risen in recent decades as more effort has been made to find and market natural gas; and prices were unexpectedly low for most of the 1980s and 1990s. Gas is also the cheapest feedstock for making hydrogen, possibly the dominant energy carrier of the future.

2010 ENERGY INTENSITY
kgoe (kg of oil equivalent) of energy needed to produce US $1,000 of Gross Domestic Product (GDP) projected 1996

- World average: 370 kgoe
- Western Europe: 200 kgoe
- South Asia: 620 kgoe
- South and Central America: 510 kgoe
- East Asia: 390 kgoe
- Central Eastern Europe: 360 kgoe
- North America: 890 kgoe
- Australia, Japan, New Zealand: 1760 kgoe
- China: 740 kgoe
- Middle East: 770 kgoe
FRESH WATER Availability per person per year cubic meters.

**Projected 1997 borders:**
- **Relative Sufficiency:**
  - Over 1,700 cubic meters per person
  - Intermittent or localized shortages
  - Relative sufficiency in 1995 although shortage predicted for 2050

- **Water Scarcity:**
  - Under 1,000 cubic meters per person
  - Chronic and widespread water supply problems

- **Water Stress:**
  - 1,000–1,700 cubic meters per person
  - Chronic water shortages impede economic development and cause environmental degradation

**Note:** Based on UN population data 1996.
Contemporary terrorism has two major motivations: challenging the global role of the United States and national self-determination. The violent challenge to the global presence of the United States by al Qaeda is a relatively recent development that transcends state politics. A worldwide network of terrorist cells, more or less affiliated with al Qaeda, has targeted buildings and activities that represent Western economic, political, and cultural activity. The suicide attacks of September 11, 2001, targeted symbols of U.S. political and economic power. The bombing of a hotel in Bali targeted Australian youths on holiday in a Muslim country. A more traditional form of terrorism is ethno-national territorial politics within states. For example, terrorist activity in India, Pakistan, and the Middle East is dominated by the goal of national separation or self-determination.

NORTH AMERICA
For decades North America was practically free from terrorist attacks. Huge casualties and national shock from the events of 9/11 instigated the war on terrorism.

SOUTH AMERICA
This area has seen more attacks than any other over the past few years, but with relatively few casualties. Kidnappings and attacks on U.S. oil interests predominate.

AFRICA
The presence of failed states and poverty raises concerns that some countries will become training and recruitment grounds for terrorist groups targeting Israel and the United States.

MIDDLE EAST
The Israel-Palestine conflict; terrorist challenges to established regimes (such as Saudi Arabia’s); and insurgency against an increased U.S. presence are volatile issues in the region.

ASIA
Conflict over Kashmir, tensions in Afghanistan and Pakistan, and al Qaeda presence in Southeast Asia combine to make this region a pivot in the war on terrorism.

EURASIA
This is a key arena in the war on terrorism, with many countries receiving financial and military aid from the United States. Reaction from some Islamic groups is evident.

WESTERN EUROPE
Several countries have participated in the U.S.-led war on terrorism—but are concerned that they, too, have become actual or potential al Qaeda targets as a result.

Trade flow
The circling paths of trade between continents show just how interconnected the world’s economies truly are. The richest countries, such as those in North America, western Europe, and the Far East, trade mostly with each other, exchanging different varieties of similar goods such as automobiles. However, trade also flows between higher- and lower-income regions. In those cases, the high-income countries typically provide more complex goods, such as electronic equipment, while low-income countries provide primary goods such as minerals. Smaller, poorer countries are more likely to be dependent on exporting a single commodity, such as coffee or petroleum. In general, poor, labor-abundant countries tend to export labor-intensive goods, such as textiles and shoes, and the countries rich in arable land will export foods such as grains.
